Sumner Houston arrived home the last of the week from a month's vacation during which time he visited Portland, spent some time at the Coast, and took in the State Fair at Salem last week. He returned much improved in health.

POULTRY FACTS

INFERTILE EGGS KEEP BEST

Fertile Germ in Hot Weather Quickly Becomes Blood Ring, Spoiling Egg for Market.

(Prepared by the United States Department of Agriculture.)

Farmers lose millions of dollars annually from bad methods of producing and handling eggs. One-third of this loss is preventable, because it is due to the partial hatching of fertile eggs which have been allowed to become warm enough to begin to incubate.

The rooster makes the egg fertile. The fertile egg makes the blood ring. You can save the money now lost from blood rings by keeping the male bird from your flock after the hatching season is over.

The rooster does not help the hens to lay. He merely fertilizes the germ of the egg. The fertile germ in hot weather quickly becomes a blood ring, which spoils the egg for food and market. Summer heat has the same effect on fertile eggs as the hen or incubator.

After the hatching season cook, sell, or pen your rooster. Your hens not running with a male bird will produce infertile eggs—quality eggs that keep best and market best.

Rules for handling eggs on the farm: Heat is the great enemy of eggs, both fertile and infertile. Farmers are urged to follow these simple rules, which cost nothing but time and thought and will add dollars to the poultry yard returns:

1. Keep the nests clean; provide one nest for every four hens.
2. Gather the eggs twice daily.
3. Keep the eggs in a cool, dry room or cellar.
4. Market the eggs at least twice a week.
5. Sell, kill, or confine all male birds as soon as the hatching season is over.

POULTRY KEEPING PAYS WELL

Community Breeding Association in Virginia Proves Most Profitable Institution.

(Prepared by the United States Department of Agriculture.)

A striking example of community breeding accomplishment is furnished by the Barred Plymouth Rock association, Farmville, Va. Organized for

A Well-Selected Flock of Young Hens of Uniform Size, the Kind That Make Excellent Winter Layers.

poultry improvement in 1915, this association has made such continuous and rapid growth that it has been incorporated with a capital stock of \$1,500, and a manager employed to handle its affairs.

Receipts during the first five months of operation amounted to \$7,500, and recent reports show that members of the association have on hand more than six thousand Barred Plymouth Rock hens and pullets. In the spring of 1916 they sold 1,000 capons on a northern market.

Before the Farmville association was formed poultry keeping in that locality was merely incidental, an unimportant side line to other farming activities. Today poultry keeping is one of the important industries of that region, and even the casual traveler is impressed with the large numbers of Barred Rocks and farms.

POULTRY FOR YOUNG PEOPLE

Boys and Girls Who Take an Interest in Chickens Should Be Given Chance to Raise Them.

Poultry raising appeals to the young people in many instances. The boys and girls who like poultry and would take an interest in fowls should have a chance to raise poultry and use the income as they please. Parents often may help their children to become successful in this way.

Ticklish Bit of Tunneling.

A very interesting bit of tunneling was recently done on the Fourteenth street tube under the East river, New York. The heading was being run in rock and at one point test holes showed a thickness of only eight inches of sound dry rock above the line along which the top of the tunnel was to run. As the tunnel was being driven without the use of compressed air it was decided to drop the upper heading four feet until this thin cover of rock was passed. The cast iron lining was set in place at each side of this section and then the rock was removed very carefully by using a great many holes each loaded with about one-eighth of a stick of dynamite. As each bit of rock was removed the arch of the tunnel lining was set in place. By this means the dangerous section was tunneled without breaking through the thin shell.—Scientific American.

His Desire.

Last autumn Roland was much in love with his new teacher, and tried to prove his affection by doing many errands for her. One of them was the hauling of the fertilizer from his father's barn to her flower garden.

This spring Roland became interested in a victory garden and started one. One day he journeyed to the home of his last term teacher, told her of his garden and then ended the conversation with, "Do you remember that fertilizer I gave you last fall? Well, I'd like to have it back now for my own garden."

Why Strike Collapsed.

Two telegraph operators worked in the office of the Milwaukee Free Press. Both were employed by the press association and not by the paper. They came soused one Sunday night, decided to strike, making demands for more pay and shorter hours from the managing editor of the newspaper. They were told to make their petition to their employers. The telegraphers retired for a council of war, put the strike into effect and decided to picket the office. The office had but one entrance, but there must be strategy; so one of the strikers posted himself directly in front of the office and the other around the corner, the two being out of sight of each other.

Then each had the same hunch of getting another drink. They left their posts and that was the end of the strike. Other operators were called in and the wires buzzed merrily on.—Pop.

TOO LATE TO CLASSIFY

FOR SALE—640 acre ranch on the Ochoco. This is a snap. Inquire at this office. 4711c

WANTED—Salesmen to sell groceries direct to farmers, commission. One competent to establish and take charge of business paying \$3,000 to \$4,000 a year. We furnish training experience, capital.
