Hawley, Homer Norton, Prineville Meat Co., O. B. Gray, Alice D. Pratt, Paulina Stapp, John Combs, Tom-A-Lum, Jas. Taylor, Warren Libby, B. M. Short, W. Almack, C. A. Sherman, A. McFadyen, Crook Co. Des Moines, W. F. King, N. G. Wallace, Hugh Lister, and E. T. Luthy.

WHEN YOUR BATTERY IS BEING TESTED Have you ever wondered just what the battery man does when he tests your battery? You know the test should be made frequently, but do you know why? When we asked Mr. Mansfield of the Inland Ward Service Station at the Inland garage to answer this question for our readers, he said, "I will try to talk in words of one syllable and keep away from technical terms. The hydrometer test simply weighs the battery solution. We take the weight of distilled water as a

standard and call it '1.' Sulphuric acid weighs more than water so that when it is added to water, as it is to make the battery solution, the solution will naturally weigh more than the original water. It is this increased weight that we measure. "If the battery is properly charged the solution should weigh one and 28-100 times as much as water. This weight is called specific gravity. When a battery is discharged, the acid leaves the solution and enters the plates, which makes the solution lighter, or nearer the weight of water.

"When a battery is charged, the acid leaves the plates, enters the solution and makes it heavier. Therefore when we weigh the solution (or test the battery) and find that it weighs 1.80 times as much as water, it shows that the battery is fully charged. If, however, for instance, it weighs 1.170 times as much as water, it shows that the acid is in the plates and not in the solution; therefore the battery is discharged. "But remember that you cannot charge the battery by adding acid. The original acid is still in a discharged battery. It is in the plates and must be driven back into the solution by charging from an outside source. So you see if you add acid to your battery, you will have more than you should have in there, which will cause damage.

"There are just two things which a car owner can safely do to a battery himself" went on Mr. Mansfield. "He can add distilled water to a point half an inch above the plates and he can weigh the solution himself with a hydrometer syringe. We will be glad to do this for him without any charge, but I would like to own every car owner in Prineville nearest trying to do anything else with his battery."

PRESBYTERIAN CHURCH

Sunday, December 14. The theme of the services at 11 a. m. and 7.30 p. m. will be drawn from the Inter-church World Movement and the New Era Movement of the Presbyterian church for which we are holding meetings in Portland this week. Bible school at 10 a. m. An encouraging meeting was held last Sunday evening in preparation for a special course of Bible study for High School students. The state course of study will be followed, which leads to credits for graduation. This department of the school will meet at 6:30 p. m.

Amplifies Sound.

In a sound amplifier invented by a Californian scientist the fall of a feather makes a noise like a wrestler thrown upon a mat.
