STATE CHAMBER DRIVE IS GOING GOOD

Approximately $15,000 or one-sixth of the state's quota outside of ward the budget sought by the Oregon State Chamber of Commerce in its expansion movement.

Springfield, Marshfield and Bend were the three first towns to go over the top in the order named, in raising their quota. Other towns that Eugene, Newport, Madras & Jefferson County, and Maupin. Madras' quota was raised in less than 24 hours.

C. E. Roush, chairman of the Madras & Jefferson county committee, in a letter to President Charles Hall of the Oregon State Chamber of Commerce, reporting the success of the Madras & Jefferson county canvass, said:

"This section of the state is greatly interested in raising the Greater Oregon fund, and we want to see every other section of the state support this movement heartily. This applies especially to Portland. Portland has a great opportunity at this time to prove to the outlaying sections of Oregon, which comprise her trade territory, that she is willing and ready to reciprocate in the solution of our problems, and we don't expect her to fail."

The intensive canvass now in progress at Prineville, Coquille, Myrtle Point, Klamath Falls, Lakeview, Wellowa, Elgin, Lebanon and Wapinitia.

It is scheduled to begin in the following towns during the week of June 28th—Cottage Grove, Ashland, Brownsville, Harrisburg, Bandon, gardnier, Newberg, McMinnville, Sheridan, LaGrande, Wasco and Moro.

Additions to Earth's Weight.

In the early days of its history the earth grew rapidly by the addition of meteoric matter. It is still growing in the same manner, though scarcely to an appreciable extent, for the mass of meteoric matter added yearly is reckoned to be only 20,000 tons. In the course of ages the larger planets have swept up practically all the fragments of the original disruption, and the only available source of supply of meteoric matter seems to be that brought by comets.

Exit Humorist.

While making a tour of the southern states we were driving along a country road, when a farmer came walking toward us. One of our crowd, a humorist, thinking he would have some fun with the man, stopped the car, and taking a small satchel and a magazine, gave a ten-minute impression of Billy Sunday. When he had finished, the man looked at him a little queerly, put his hand in his pocket and gave him a card. On it were the words: "I am deaf."—Exchange.

Sea Serpents Numerous.

There are plenty of sea serpents, and of all snakes they are the most venomous. In tropical waters they are vastly numerous, especially in the Indian ocean, where they are often seen literally by hundreds, swimming at the surface of the water. They are six to eight feet long, very fierce and will commonly attack human beings. Their bodies are flat, and almost wholly filled by the lungs.

Finger-Prints in Babylon.

A group of valuable historic tablets from the excavations of the city of Babylon, bearing dates as far back as three and a half centuries before the Christian era, was recently secured. Several of the pieces carry the distinct prints of the fingers which molded them over 2,000 years ago.

Mother Love.

A mother's love is indeed the golden link that binds youth to age; and he is still but a child however time may have furrowed his cheek, or silvered his brow, who can yet recall, with a softened heart, the fond devotion or the gentle chidings, of the best friend that God ever gives us.—Bovee.

Awful Possibility.

Edward was talking cannibals to his sister. Rather frightened, the little sister said: "Oh, I hope they don't come here. If they do, the'd eaten us up and then we won't have ourselves."

SEE EFFICIENCY IN FARM TOOLS

Tractor Covers More Ground in Day Than Man With Six Horses in Plowing.

TWO-ROW CORN CULTIVATOR

Use of Corn Binders Increases Efficiency of Man-Labor 50 Per Cent Over That Done by Hand—Good Work of Hay Loader.

(Prepared by the United States Department of Agriculture.)

With a 28-inch horse-drawn plow, one man accomplishes from 70 to 80 per cent more than with a single-bottom plow. One man with a 28-inch plow drawn by a tractor covers from 30 to 35 per cent more ground in a day than does a man using six horses

The One-Horse Cultivator Illustrating Waste of Man-Labor Actually Entailed by Using Small Implements.

on a horse-drawn plow of the same size. A three-bottom plow drawn by a suitable tractor enables one man to accomplish from 60 to 70 per cent more than does the two-bottom plow drawn by six horses.

Two-Row Cultivator.

These facts were brought out by about 600 replies to an inquiry addressed to farmers in central Illinois by the office of farm management United States department of agriculture. Under conditions where the use of a two-row corn cultivator is practicable, this machine enables one man to cover nearly twice as much ground per day as with a one-row cultivator. In the section represented by replies received by the department, three horses are most commonly used on the two-row cultivator and the addition of a fourth horse apparently increases but little the amount of ground covered per day.

Such of these farmers as use corn binders have found the use of this machine increases the efficiency of man labor 50 per cent, on the average, over that achieved when cutting and shocking by hand. Eighty bushels, the reports show, is an average day's work for one man when husking corn from the standing stalk by hand.

Value of Hay-Loader.

With respect to the value of a hay-loader, they learned that the use of this implement reduces by about 25

The Two-Row Cultivator—One Man and Three Horses Doing the Work of Two Men and Four Horses With Two-Horse Cultivator, or of Four Men and Four Horses With One-Horse Cultivator.

per cent the time required to put on a load of hay, while the amount of labor required for unloading into the mow is only a little more than half as great when a hayfork is used as when the work is done by hand.

BOOST FOR PUREBRED SIRES

Efforts Being Made to Eliminate Scrub Sires Appreciated by Many Stock Breeders.

Many breeders of purebred stock do not realize the value of the state and national purebred sire crusade. They fail to see that this crusade is increasing the use of purebred sires and consequently, increasing the demand for them and prices.

This crusade is a business proposition and is of greatest value to the breeders of purebred stock and they should support it.

APPEARANCE OF FARM HOME

Surroundings Must Be Made Attractive to Uplift Family, Visitors and Passersby.

A home and its surroundings must be attractive in order to be most uplifting to the family, visitors and passers-by. Farmsteads especially need attention in order to secure satisfactory conditions, says the United States department of agriculture. The farm home and the farm business are so closely related that the success of the latter is reflected in the appearance of the former.
