MINIATURE STORMS IN CITY

Movements of Air Currents, Developed by High Buildings, Make Study That is Interesting.

You may learn many interesting things about air currents and the way storms develop by watching the movement of pieces of paper, or perhaps your hat, as it is whirled about the street.

A variety of miniature windstorms are developed by the high buildings of our cities or the forms of streets, which will repay careful study. On a hot day even, when the air is perfectly quiet, the atmosphere as it becomes heated tends to rise against the sides of rocks or buildings, and if it travels far enough will develop in a strong wind, which descends on the opposite side and plays queer pranks.

A small whirlwind is often produced by the action of wind against a corner formed by several buildings. As the wind travels down a street, especially a narrow one, it rapidly increases in velocity. A little will spill into the side streets, but the main stream will flow on, gathering momentum.

Watch the wind strike against the side of a high building and notice how it mushrooms out on all sides, splitting into many air currents and trace these till they come to rest, but be sure to hold tightly to your hat in the meantime.—Boys' Life.

JURORS AND TRIAL LAWYERS

Men Who Render the Verdict Said to Have a Distinct Influence Over the Counsel.

Juries differ widely. Charles Russell used to say, or instance, that there was all the difference in the world between English and Irish juries, remarks the Manchester (Eng.) Guardian. Irish juries enjoyed the fun and the drama of a trial; they entered into it all and appreciated the cut and thrust; whereas English juries were concerned more with wondering how soon they would be released.

But there is a characteristic common to all juries. They have quite as much influence, though in a different way, over counsel as counsel have over them. One of the greatest advocates, Scarlett, Lord Abinger, declared that his success was due chiefly to the rule he made of selecting one particular jurymen, not necessarily the foreman, and addressing the argument as if to him personally. He would then work away till he felt that he had convinced this man and could rely on him when the verdict was being considered.

African Seeds.

Sixteen hundred of seeds and plants of African fruits, vegetables, grains and flowers not common to this country have been sent to the United States Department of Agriculture for

TOLSTOY IRKED BY IDLENESS

Letter Written by Russian Philosopher Concerning Life Led by Indolent Men of Means.

The Vossische Zeitung prints the following letter by Tolstoy, written in 1884, with the remark that it has never before been published except in Russian, and that its value lies in the fact that as early as 1884 Tolstoy had about made up his mind to do what he did in 1910—leave home and live the life of a peasant. The letter reads in part:

"I am living in the country, involuntarily according to a new method. I go to bed early, get up early, write very little but work a great deal, either making boots or mowing hay. I see with joy (or possibly it only seems to me like joy) that there is something up in my family. They do not condemn me; as a matter of fact, they seem ashamed of themselves. "What miserable creatures we are and how we have all gone astray. There are a great many of us here, my own children and the children of Kusninsky, and nobody does a thing but gulp down food. They are all big and strong, yet they do nothing. People in the village are at work. My children eat and make their clothes and their rooms dirty and that is all. Everything is done for them by somebody else, yet they do nothing for anybody. And worst of all, they seem to feel that it is as it should be. But I have had my own part in building up such a system, and I can never forget it. I feel that for them I am a trouble-fete. But it is clear that they are beginning to see that this cannot go on this way forever."

Giant Eels.

It is said there are eels no one can land. Some years ago a giant conger was caught in shallow water off the shores of England. It measured 8 feet 8 inches in length and weighed 148 pounds. Congers half that size have been known to bite a man's hand in two and to have driven their teeth through the blade of an oar.

In 1913 Kakanamsku, the champion swimmer of Honolulu, was attacked by a giant eel, which dragged him under water, and held him there for nearly two minutes. He escaped at last, but at the cost of a finger from his right hand.

Eels attain an immense size in the rivers of New Zealand and have been known to attack bathers. In fact, many cases of drowning have been proven to be where eels have dragged the bathers beneath the surface of the water.

World's Jute Comes From India.

Of sub-tropical products India gives us the whole of the world's jute and a large proportion of its hemp. Some 500,000 tons of jute are exported annually. Thirty years ago Indian indigo was the world's standard blue, but the vegetable dyes of India have been destroyed by the German aniline dyes and the principal victim has been indigo.

Financial Backing.

"Your friend the reformer seems to be enjoying great prosperity these days." "He had a stroke of luck." "What was it?" "He ran across a very rich person who had a troubled conscience."

New York Boys' New Game.

The game of marbles no longer holds a throne in boyville. Any New York side street where there's enough room between bluecoats and automobile traffic to play, will show you that a new game has taken its place. "Sidewalk checkers," the boys call it. The new game really has the elements of both the old marble shooting days and checkers as played on a board. Checker men are used—red, black, blue—the color makes no difference. A ring is drawn with chalk and the object is to flip your checker man with enough force to knock your contenders out of the ring. "Hully gee!" said a future Ponce as he gathered up his winnings on Reade street near Broadway, "ain't I got enough lumber here to start me a paper mill!"—New York Sun.

Men Who Repair Skeletons.

There are two kinds of skeleton-menders—the bone surgeon and the skeleton-assembler. Art schools, medical colleges, and students of anatomy require an accurately constructed skeleton to aid in their work.

All the bones must be properly assorted and carefully put together.

They are strung on fine wires. The skeleton-assembler must also pick out of the hundreds of old bones that are sent him the 200 or more bones that belong to the particular individual being reconstructed. It is not an easy task, and the price of skeletons is justified by the amount of work required to construct them.—Popular Science Monthly.

May Use South American Wood.

The Pennsylvania railroad, owing to the unprecedented cost of railroad ties, has decided to investigate the adaptability of the hard woods of Central and South America for this purpose. It is announced. Normally the Pennsylvania system uses from 5,000,000 to 8,000,000 ties annually. The average net cost has risen fully 100 per cent since the beginning of the war. Furthermore, white oak, which the company regards as the most desirable wood for ties, is becoming scarcer. Therefore, the company has inquired under way to determine the comparative cheapness and durability of southern hard woods for railroad ties.

The Useless Bail.

"The bell on your house has been out of order for weeks. I should think you would have it repaired." "What's the use? Nobody ever rings it any more. Our friends just sit out in their cars and hook their auto horns until we come to the door."

El Capitan—one of the wonder scenes of the Yosemite. El Capitan is a huge block of sheer granite, 3,000 feet above the Merced River.

The Glories of the Yosemite

The Yosemite Country extends an invitation to all lovers of the great outdoors. It presents a variety of scenic grandeur unsurpassed anywhere in the world—lofty mountains, noble forests, beautiful lakes, colorful flowers, and mystic falling waters. It is 1,124 square miles of scenic superlatives.

Good motor roads lead into Yosemite National Park. Garage and automobile camp sites are provided in the valley—and everywhere you can get "Red Crown"—the gasoline with a continuous chain of boiling points. "Red Crown" will get you there and get you back.

Look for the Red Crown sign before you fill.
