Science Conquering Disease.

One curious point which is shown in insurance tables is that those organic diseases which are so frequent in middle life develop at a period from five to ten years later than they did fifty years ago. Medical science has, of course, done a lot for the race in the way of lengthening human life, but sanitary science has done more. Zymotic or infectious, diseases are being slowly but steadily conquered by improved water supply, drainage and housing.

Absent-Mindedness

Interest in what one is doing and the necessity of doing it within a given time go far toward compelling concentration of thought and attention. Power of concentration is, in fact, so com-mon a possession that it often grows into absent-mindedness, absorption in one line of thought leading to neglect of others. Absent-mindedness is frequently encountered, but people do not always think of it as an accompaniment of concentration.

Richard Tucker who appears with Pauline Frederick in the new Goldwyn Picture, "The Woman in Room Thirteen." which comes to the Lyric Theatre Thursday is the same Richard Tucker who was reported killed in action and the same Richard Tucker who was director of theatricals for the American troops at Neuenahr, Germany.

At the outbreak of the war Tucker gave up his professionel career and entered the U. S. Army as a second Reutenant of Infantry. The picture is directed by Edward Sloman, from the scenarioization of the London novel by Albert Shelby LeVino. Jackson Rose photographed the production.

Vertigo is Caused by Trouble in Ear. Dr. Douglas Vanderhooff of Rich-mond, Va., states in the Medical Record that we must thoroughly understand that the labyrinth of the ear is the sense organ of equilibrium. Vertigo, from whatever cause, was essentially an ear study, and was always due to some disturbance of the vestioular apparatus.
