Children are much more likely to contract the contagious diseases when they have colds. J. E. Jennings and family have returned from Lethbridge, Alta, Canada, where Mr. Jennings had been engaged in the laundry business for almost a year. He was very glad to return to St. Johns, as the extremes of heat and cold in the "Canuck" country was something terrific. In the summer it grows so hot that children can cry all day without shedding a tear, and even the wagons go around with their tongues hanging out. In winter it gets to forty below and one's voice cracks when he attempts to speak. It is quite likely that the former councilman will engage in business in or near St. Johns.

The average duration of human life is about 33 years. One fourth of the people of the earth die before the age of six, one half before the age of 16, and only about one person in every hundred born live to the age of 65. The deaths are estimated at 600 a minute, and the births at 700 a minute. The world's population therefore gains 10,000,000 every year, and 9,000,000 die annually.
