The Cash and Carry Grabateria The Changing Times

The era of Chain Stores came about because a group of men with large capital could, by starting stores in different localities increase the outlet of merchandise emanating from one source.

The Chain Store system is nothing more than any other store except the buying part is concentrated at one place. The buyers for these stores have their headquarters at the source of production and they buy direct from the packer or the producer.

It goes without saying that a buyer who can buy the same sort of merchandise for several hundred stores can command a better price than a buyer for just one store.

The secret of advantageous grocery prices in St. Johns is this ability to buy in connection with many other stores. That is why you have had established by this store better prices than prevail almost anywhere in Portland.

Coupled with this buying capacity, the activity of the owners, the acquaintance with the locality because of our long residence here ought to convince any one that we can do business at less cost than the average grocery.

We always believed that "a word to the wise was sufficient."

Do You Know

That one fifth of the standing timber in the United States is in Oregon?

That within approximately five years the Southern forests will be exhausted and the Pacific Northwest called upon to supply the world's markets for soft woods?

That Portland is already the greatest lumber shipping point in the world?

That the two mills now located on the Willamette side of the Peninsula are cutting 145 million feet of lumber yearly?

That that means an average of FIFTEEN CARLOADS of lumber alone shipped out of this neighborhood daily?

That improvements now under way at one of these mills will make it best equipped saw mill on the Pacific Coast?

That there are other industries just as important as lumber in this district?
