### ELECTRICAL Housekeeping

Eight hours is insufficient  
time for human hands to per-  
form all the household tasks.  
However, it is possible to estab-  
lish the eight hour day in the  
home by making use of the elec-  
trical hands that are offered to  
you in the form of the electrical  
dish-washer, washing machine,  
ironing machine, vacuum  
sweeper and many other labor  
saving devices.

These "uniting" household  
assistants will do your work  
quickly and efficiently. Your  
home can be run systematically  
with these electrical hands for  
they never disappoint you or  
grow tired. Your time and  
energy can be devoted to the  
better things of life, when you  
keep home electrically.

Glad to show you any time—

### SKEPTICISM OUT OF PLACE

No Announcement of Scientific Dis-  
covery May Today Be Looked  
Upon as Fantastic.

That the butterfly contains within it-  
self what Huxley would have called  
the promise and potency of the cure  
of tuberculosis and perhaps of other  
malignant plagues might seem fantas-  
tic proposition were it not for our  
memory of its antecedent, remarks the  
North American Review. It is now  
about 55 years since Pasteur perceived  
in the fermentation of beer and wine  
the principle which emboldened him  
to declare that we should one day learn  
to eliminate all communicable diseases  
from the world. Biot, Dumas and  
other veterans of science were incredu-  
lous. But crying "Travailleur! tour-  
jours travailleur!" the young master of  
them all proceeded to cure first the  
"sickness" of beer and wine, then the  
"silkworm disease," then a formidable  
poultry pestilence, then one of the  
deadliest plagues of cattle.

Having thus worked his way up in  
the scale of life, he addressed him-  
self by the same methods to the sal-  
vation of man from what had been re-  
garded as the most hopeless and hor-  
rible of diseases, rabies, and thus  
opened the way of Lister, of Koch, of  
Finlay and Carrel, and to all the un-  
speakably beneficent wonders of the  
science of bacterial therapeutics. If  
thus Pasteur found in an atom of yeast  
the cure for rabies, typhoid, cholera,  
malaria, yellow fever, diphtheria and  
bubonic plague, there is no occasion  
for skepticism when his disciple, Metal-  
nikov, suggests that in the larva of a  
butterfly may be found the cure for  
other pestilences.

### TOBACCO USERS NOT IMMUNE

Only Germs of Cholera and Meningitis  
Succumb to Smoke or Juice  
of Nicotine.

Professor Pantoni of the University  
of Rome has performed a series of ex-  
periments by way of determining  
whether tobacco, smoked or chewed,  
would act as a disinfectant against dis-  
ease germs. For the purpose he used  
Tuscan cigars, Macedonian cigar-  
ettes and "very strong chewing to-  
bacco." He placed a piece of paper  
covered with a saline which contained  
the germs of cholera, influenza, dip-  
theria, typhoid and meningitis in a  
glass jar and then filled the jar with  
tobacco juice, says New York Evening  
Post.

He has arrived at the depressing con-  
clusion that, except in the case of  
cholera and meningitis, tobacco is pow-  
erless in the presence of germs. As to  
typhoid and diphtheria, he exposed the  
bacteria to the strongest of smoke from  
Tuscan cigars for one hour, and  
they were as robust at the end of the  
experiment as at the beginning.  
As to tuberculosis, Professor Pan-  
toni says that the most inveterate  
smoker or chewer can hope for no pro-  
tection from his indulgence. The ele-  
ments of tobacco that disinfect in the  
case of cholera and meningitis are  
tar, nicotine and formaldehyde.

"Rebuked.  
The prospective employer looked the  
applicant over carefully.  
"And now," he said, "about the sal-  
ary; what would you expect?"  
"Oh, I couldn't consider less than  
\$10,000 a year," said the applicant.  
"You don't understand me," said the  
employer. "I don't want to buy you;  
I only want to rent the use of you."
