In reply to a Senate resolution of Sep In reply to a Senate resolution of September 7, directing the Secretary of the Treasury to inform that body to what extent the appropriations heretofore made for the enforcement of the Chinese exclusion act have been expended and what portions are now available, and whether in his opinion it is necessary that a further encountries he made by W. J. Davidson has just returned to Cleveland, O., after building and starting in Siam the first electric railroad in Asia. The motormen and conductors are natives, who were trained by Mr. Davidson.

As an inducement to put wide tires on their wagons New York taxpayers are offered a yearly rebate of one-half their discovered by the current year amounted to \$63,502, which includes the unexpended balance of the appropriation for the last fiscal year, appropriation for the last fiscal year, \$20,692. It is estimated that \$38,000 will be required to pay the salaries and will be required to pay the salaries and necessary expenses of the officers regularly employed to enforce the exclusion act for the remainder of the current year, leaving an estimated balance available for the deportation of Chinese found to be unlawfully in the United States of \$25,502\$. It appears by the census report of 1890 that the Chinese population of the United States in that year was 106,688. Of this number 95,477 were in the Pacific States and Territories. The number who registered under the act of May 5, 1892, was 13,243, leaving 93,444 who failed to avail themselves of the privileges of the act. Assuming that about 10 per cent of these would be entitled to exemption, the Secretary finds there would still remain about 85,000 liable to deportation under the law. The lowest cost for transporting Chinamen from San would still remain about 85,000 liable to deportation under the law. The lowest cost for transporting Chinamen from San Francisco to Hong Kong is 435 per capita, and other expenses incident to arrest, trial and inland transportation would also average, he says, not less than \$35 per capita. If, therefore, all of those who did not register should be transported to China, the cost involved would aggregate in round numbers about \$6,000,000. This, the Secretary says, in his opinion would be a moderate amount to carry out the act. He was unable to furnish an accurate estimate of the number who might be deported during the remainder of the current fiscal year, the matter being largely dependent upon the action of the courts. Assuming, however, that the courts would be able to dispose of 10,000 cases during such period, the amount required would not be less than \$700,000. The Secretary expresses no opinions, and makes no recommendations.

marble villa at Corfu, and christened in L'Achilleion." Vaal—\$4.00@6.00.

Flamingoes' Tongues.

The beastly Vitellius, as Gibbon calls him, spent at least six millions of money on table in about as many months. He invented, or his cook invented for him, a dish which he designated "The Shield of Minerva." One of its principal ingredients was flamingoes' tongues, of which, I may add, both Piiny and Martfal speak in encomiastic terms. Dampler says that the flamingoes have "large tongues, and near the root is a piece of fat which is accounted a great dainty." When Captain Owen was surveying the east coast of Africa, his saliors shot down hundreds of those beautiful birds in order, with an extravagance worthy of Vitalina to make a dish of the tongues alone.

Column Devoted to the Interests of the Farmer.

bout as Rich in Protein as Oats-Richer Than Corn Even in

Muscle Food-Etc.

At the prices now realized for wheat it is a question with many of our farmers whether they had not better feed it rather than self. Answering one such question through the Breeders' Gazette, Prof. Henry of the Wisconsin station

Our correspondent brings up a very interesting subject and one peculiarly proper to discuss at this time, when wheat has touched the lowest value in our grain markets known for a long time. The composition of wheat is shown in the following table, where I have compared it with oats, corn and wheat middlings.

Table showing the digestible constituents in 100 pounds:

Wheat middlings....

real nutriment.

The only possible danger in feeding wheat arises from the fact that there is no enveloping husk about the grain, and if the careless feeder gives the animal the careless feeder gives the animal the careless feeder gives the animal statement of the careless feeder gives the same and the careless feeder gives feeder gives the careless feeder gives the careless feeder gives feed the concentrated grain too liberally, de-rangement of the digestive apparatus may follow. Wheat may be fed rolled may follow. Wheat may be fed rolled or coarsely ground, or may be soaked. It should be prepared in some way before being fed, though we have fed at this station small quantities without preparation with quite satisfactory results. Much will depend upon the way in which the horses masticate the food. The best form of preparation no doubt is rolling, the same as barley is rolled for horses on the Pacific Slope.

In the process of rolling the grains are simply flattened, but not torn apart. In this form the food seems to lie light in the stomach and to be easily digested. Ground wheat may be mixed with bran to lighten it, or may be spread over moistened chaffed hay the same as shorts or other ground feed.

BTAPLE GROCERIES.

DRIED FRUITS—Petite prunes, 10@11c; silver, 11@12c; Italian, 13½c; German, 10@11c; plums, 8@6c; evaporated apples, 10@611c; evaporated apricots, 12@16c; peaches, 10@12½c; pears, 7@11c per pound.

HONRY—Choice comb, 18c per pound; new Oregon, 16@20c; extract, 9@10c.

Salt — Liverpool, 100s, \$16.00; 50s, \$16.50; stock, \$8.50@9.50.

Peculiarly-formed, double-yolked or unnaturally-shaped eggs of any kind are said to be caused by hens being too fat.

Heat times all the said to be caused by hens being too fat.

Hard times did not take root in good dairy localities. The creameries paid cash as usual, and the farmers do not know the times are hard. Ducks and geese spoil their food by walking over it; hence it is not advisable to feed hens in the same place, as they are much more particular.

Stir the cream in the cream jar every time an addition is made, and stir from the bottom. Uneven ripening means loss of fat in the buttermilk.

# FARM AND GARDEN.

Not Interested In the War.

I was riding up through Arkansas with Price's army. We were on our way back to Missouri. The Yankees had let us alone so long we thought maybe they had quit fighting or had forgotten us. We were getting anxious about it. Along toward night I met a man who had lived up there in the mountains. He had been fishing and had his string of fish with him. He was going home. I was pretty full of patriotism and notions about duty. You see, I had studied the relations of the states to the nation, and the relations of the states to the states, and the relations of the states to the states, and the relations of the states to the states, and the relations of the states to the states, and the relations of the states to the states, and the relations of the states to the states, and the relations of the states, to the states and to the nation. I thought I knew all about it. I said to this man away up in the mountains of Arkansas:

"Why aren't you in the army?"

"What army?" he asked.

"The Confederate army, of course," said I. "Oh, yes," he said, "I did hear something about such an army."

"Yes," said I, growing a little hot, "I thought so. And why aren't you out with it fighting the battles of the country?"

"What country," I said.

He looked all around him at the mountains, and then he said:

"Stranger, suppose you lived in this country, and owned all you wanted of it, and had all the use of it you wanted, and some other fellow was paying the taxes and the expense of keeping up the government, wouldn't you think you was a derned fool to go to fightin about it with that other fellow?"—St. Louis Globe-Democrat.

The Battleground of the Asorws.

The Battleground of the Asores.

In 1580 the Azores came under the power of Spain, and in the history of the next 20 years their name is frequent as the favorite battleground of the English and Spanish fleets. The partiality was indeed mainly on the side of the former and for a good reason. These islands lay right in the track of all vessels sailing to and from that enchanted region known to all men as the Spanish Main.

On the highest peak of Terceira, whence in clear weather the sea could be scanned for leagues around, were raised two columns, and by them a man watched night and day. When he saw any sails approaching from the west, he set a flag upon the western column—one for each sail. If they came from the east, a similar sign was set on the eastern column.

Hither in those days came up out of the mysterious western seas the great argosies laden with gold and silver and jewels, with silks and spices and rare woods, wrung at the cost of thousands of harmless lives and crucities unspeakable from the fair lands which lie between the waters of the Carib-

Harvard's sanitary condition is the subject of some adverse comment just nowgroundless, it would seem, because for the
present it is authoritatively denied that the
health of the college is anything but the
best; for the future any demand for reviaion is anticipated by measures already in
hand. The desire to keep expenses at a
misimum causes the demand for cheap
lodgings, and therein lies the greatest danger. The right of a student to live in any
locality is still subject to the permission of
the faculty, and an inspection of students'
quarters has begun with a view to blacklisting unwholesome houses.

In one department at least every student's
room will be visited. Where such a course
seems necessary a physician and sanitary
expert will prescribe measures necessary to
obviate any suspicious conditions, and unless these are complied with the places will
be declared untenantable for those connected with the university. This may lead to an
advance in the lowest rents, which, however, will be more than offset by the feeling
of security against avoidable illness.—Boston Transcript.

William came to see the small boy's sis-ter oftener than anybody else, but George and one or two others appeared between ter oftener than anybody else, but George and one or two others appeared between times. Several evenings ago the small boy came in about 9 o'clock, and meeting his older brother in the hall asked who was in

"What are they doing in there?"
"Oh, billing and cooling, I presume."
"I guess not," retorted the boy. "They
may be Georging and cooling, or something
like that, but no billing. I met Bill on the
street as I came in, looking as black as a
load of coal."—Detroit Free Press. A Boon For Women.

Imagine the bliss for women if they could go in and order a gown and then go back and have it fitted once or twice and sent home complete, ready to be worn in all sorts of weather and on nearly every occasion for six months to come. Of course, with a certain class of women (and a large class I must admit) it would be a case of "Othello's occupation's gone." But for those of the weater sex who fondly imagine that they have brains and would like to cultivate them, and have a higher aim in life than shopping, it would be a great boon.—Chicago News-Record.

The Earth Was Round Before Christ.
Between 850 and 276 B. C. Aristotle, "the
Stagirite," observed an occultation of Mars
by the moon, and Eratesthenes of Cyrene
computed the ciscumference of the earth
by measuring an arc of the meridian. It
seems strange that such experiments as
this last should have been successfully carried out 376 years before the birth of the
Saviour, and yet the scientific (!) men of
the world refuted the doctrine of the carth
being round for nearly 1,500 years afterward.—St. Louis Republic.
