

Wolmark's Baking Powder

Absolutely Pure

All other powders are cheaper made and inferior, and leave either acid or alkali in the food

ROYAL BAKING POWDER CO., 105 WALL ST., NEW YORK.

MARKET ANIMALS.

They Should Be Reasonably Fat for This Purpose.

TO TRAIN TOMATO PLANTS.

Pruning Aids Surplus Shoots and Tying the Plants to Supports Exposes the Fruit to the Sunlight and Favors Its Early Development.

The Ohio experiment station in one of its bulletins gives the following directions for staking and pruning: When pruned and staked tomato plants will bear much closer planting in the field than if left to themselves. Two feet by four is about the proper distance. As soon as the plants are set in the field they ought to be tied. In order to provide for the tying the following plan has been found to be satisfactory: Put strong stakes at each end of every row, and secure carefully. Smaller stakes may be set at intervals of two rods along the rows. These stakes should be about three and one-half feet in height. Next stretch two wires of about the size used in baling hay along the tops of the stakes in each row. Take ordinary lath or small sticks of any kind, of the same length as lath, and stick one just at the side of the place each plant is to occupy. The upper ends of the stakes are held in place by crossing the two wires back and forth—that is, by weaving the wires around the tops of the stakes or laths. This makes a neat little trellis, sufficiently substantial for one season, but the material can be used several years in succession. The plants are trained by simple stems and tied to the lath supports. Of course, tying must be done at successive intervals as the plants increase in height, until the top of the trellis is reached. The crop plan is to occupy the space between the wires and laths. Side shoots near the ground and suckers must be kept pinched off, as the object to be gained in staking will be lost otherwise. None of the blossoms are to be removed, but simply the leafy shoots and such, which bear no blossoms and come out of the ground or the leaf axils along the main stock. Pruning away these surplus shoots and tying the plants to supports exposes the fruit to the sunlight, and favors early development of the crop. Tomatoes thus trained ripen about two weeks in advance of those which are allowed to grow on the ground, and are free from rot and larger. The crop plan is to occupy the space between the wires and laths by the ordinary method, but because of the higher prices obtained for the fruit the profits are larger.

THE SEATTLE MARKET.

GEORGE GOULD'S VARIED INTERESTS.

He Is Diligent in Business and Active in Athletics.

George J. Gould's recent purchase of the yacht Vigilant is supposed to have been made in connection with his new business plan to sail around the world. The young man has developed a sudden desire for yachting, and the Vigilant, which he has purchased, is to be used for the purpose. The yacht is a 40-foot sloop, built in Seattle, and is owned by the Seattle Yacht Club. Gould is a member of the club, and is also a member of the Olympic Club in New York. He is a member of the Seattle Athletic Club, and is also a member of the Seattle Golf and Country Club. Gould is a member of the Seattle Yacht Club, and is also a member of the Seattle Athletic Club. KENTUCKY MIRACLE.

JUDGE JOHN M. RICE TELLS HOW HE WAS CURED.

Crippled for Six Years With Sciatic Rheumatism in Its Worst Form—He Expected to Die, But Was Saved in a Marvellous Manner.

From the Covington (Ky.) Post.

The Hon. John M. Rice of Louisville, Kentucky, has for the past two years retired from active life as a Criminal and Circuit Judge of the Sixth Judicial District of Kentucky. He has for many years served his native county and State in the Legislature and at Frankfort and in Washington, and his retirement was a noted figure in political and judicial circles. The Judge is well known throughout the State, and possesses the best qualities which go to make a Kentucky gentleman honored wherever he is known.

A CHAMPION WALKER.

In these days when the severest tests are applied in every department of athletic endeavor, walking, running, bicycling, tennis, etc., those who share in the contests must provide against emergencies. Harry Brooks, the champion walker, gives the result of twenty years' experience as follows:

"I suppose by this time, Bobby, you know how both Fred and I suffered at the winter. Well," said Bobby, "I can't say I know 'em, but I'm aware of 'em."

Hood's Cures

Parilla

REUMATISM AND SCROFULA CURED

My son Clarence was taken with typhoid fever and after four weeks of treatment he was broken. Rheumatism set in and serious sore came on him. Hood's Cures cured him.

Hood's Pills are purely vegetable, and do not purge, pain or grip. Sold by all druggists.

THE GIRL I USED TO KNOW.

When in a reverie I stray with willing foot To the time when I was young and green And I may not come to see You there to smile in memory Of the days of old ago.

WOMEN WHO OWN DIAMONDS.

A constant source of worry, they are considered in strange places. Women who own diamonds have them all over their minds and generally on their bodies. They go about the streets like traveling safe vaults. The shrewd observer will frequently see a plaid, decent-looking woman suddenly press her hand on some part of her body not apparently attracting attention and a look of anxious pass over her face. This is not caused by a casual spasm of pain, a momentary dereliction of some physical function, but by the horrible thought that her diamonds may have slipped their moorings. Some women carry their diamonds around their necks in chamois bags, like scapulars; others adjust them like porous plaster around their waists.

HOW TO FATTEN.

All Animals Intended for Market Should Be Reasonably Fat.

The market demands that all animals intended for meat should be reasonably fat before they can be considered as being fit for market. Generally this implies the feeding of a fattening ration for at least a short time before sending to market. How long this feeding should be kept up must be largely determined by the condition of the animal. One advantage in keeping all animals intended for market in good condition during growth is that but a short feed will be required to properly finish them for market. While fat is essential in fattening, the crop plan is to occupy the space between the wires and laths by the ordinary method, but because of the higher prices obtained for the fruit the profits are larger.

WOULD BE GOVERNOR OF GEORGIA.

That is the Ambition of Judge J. K. Hines of Atlanta.

The state campaign in Georgia, which is to culminate on Oct. 3 in the election of a legislature and full list of state officers, has already opened, and the candidates are in the field with a complete ticket. The Democratic convention will not be held until Aug. 2, but the leading candidates for the gubernatorial nomination, General Charles E. Evans and W. Y. Atkinson, are actively bestirring themselves in the canvass for delegates. As a United States Senator, Evans has been prominent in his efforts to improve the conditions of the Georgia people. He has been active in the Georgia State Police, and is a member of the Georgia State Bar. Evans has been prominent in his efforts to improve the conditions of the Georgia people. He has been active in the Georgia State Police, and is a member of the Georgia State Bar. Evans has been prominent in his efforts to improve the conditions of the Georgia people. STAMPED OUT.

—blood-poison of every name and nature, by Dr. Pierce's Golden Medical Discovery. It cures every organ into healthy action, purifies and enriches the blood, and through it cleanses and renews the whole system. All Blood, Skin, and Scalp Diseases, from a common Itch or eruption to the worst Scrofula, are cured by it. For Tetter, Salt-rheum, Eczema, Erythema, Boils, and Carbuncles, the "Discoverer" is a direct remedy.

PALMER & REY TYPE FOUNDRY,

405-407 Sansome Street, San Francisco.

NITROGEN FOR PLANTS.

It is the Most Valuable Element of Fertilizers.

Nitrogen is the most valuable element of fertility in soil, is the most abundant one in nature, and is about the heaviest one to get in a form available for plant food. The air we breathe is about four-fifths nitrogen, the other fifth being oxygen. In breathing we use the oxygen and discard the nitrogen. Pure oxygen would be too strong, and we should be killed by breathing it, and nitrogen has been regarded as merely a diluting material. All attempts to secure the nitrogen from the air in a shape in which it would be available for plant food have failed, but it has been discovered within a few years that certain plants, which are known as leguminous plants, have the power of fixing nitrogen from the air. These plants are known as leguminous plants, and they are the source of much of the nitrogen in our soil.

MEAT AND PROVISIONS.

FRESH MEATS—Calf, 12¢; pork, 10¢; beef, 8¢.

PROVISIONS—Hams, 12¢; bacon, 10¢; lard, 8¢.

BUTTER, CHEESE, EGGS AND POULTRY.

WASTE

It overcomes by giving the body proper and sufficient nourishment. When waste is active and you are losing flesh and strength, take **Scott's Emulsion** of Cod-liver Oil. It will overcome the waste by giving ample nourishment. Physicians, the world over, endorse it.
