MAN MAY YET FLY.

Wonderful Birdlike Machine Constructed by Professor Lillenthal.

Can a man fly? Learned profess the sciences of aeronautics agree that he cannot, and a formidable commission of experts appointed by the Germa government to investigate into the pos government to investigate into the po-sibilities of aerial navigation have final-ly and decisively and officially said that it is impossible. Still an ingenious and observant German of the name of Otto Lilienthal, after a long series of experiments and in the face of the decisions of the eminent scientists, has succeeded in oving that a clever man can fly, and

fly for considerable distances too. Professor Lilienthal like most me who have solved difficult problems, have gone clear away from the principles to which other men have found limitations When he decided to fly, in other words, he left the possibilities afforded by the balloon entirely out of his calculations. Balloons, said he, are crude affairs, day ous, not to be depended upon, nonrigible and clumsy. There is nothing in nature built upon the principle of the balloon, yet there are things in nature which can fly, and fly much better than the best balloons. Those things are birds. To the birds, then, I will go for the model of my flying machine. And to the birds he went.

From these same birds it was that or Lilienthal learned the true principles of aerial navigation, which principles he has succeeded to a degree in adapting to the uses of man. He first carned that it is the concave shape of a bird's wing that enables it to soar, rising or falling at will without muscular exertion in the teeth of a high wind. Then he learned that a bird's wing bones are constructed similarly to those in a man's arm. Knowing these things, he built his flying machine, or, to be more correct, his soaring machine. He made for himself of light but impervious cotton cloth and split willow wands two immense wings 23 feet from tip to tip, and a practicable if not highly ornamental rudder or tail.

He preserved in their construction a nearly as possible the form of a bird's wings and tail, increasing the parabolic curve of the bird's wings to the exact proportionate degree for his larger ones wings and the tail, weighing in all only 25 pounds, are so constructed as to fold up like the wings of a bat. Having completed them, the professor em to his arms, took a run ng a hilltop and calmly and confi jumped over the side, spread ing his wings as he did so. He soare some distance and alighted in safety and comfort. He repeated his experi ment many, many times, learning how to control his apparatus, how to change He improved his wings and tail and kept on practicing until now he can soar for several hundred yards, rise to a much greater height than he started from and fulfill most of the functions of a big bird, save only that of propelling alf in still air and starting his flight from level ground. These two things a man is not strong enough to he bird possessing much greater gth for its size and weight than the most muscular man. But what Profes-sor Lilienthal lacks in strength he has made up in ingenuity, for he has now constructed a little motor, operated by carbonic soid gas, which, while it adds scarcely anything to the weight of his flying apparatus, is capable of developng continuously two horsepower, more than enough energy to work the wings. Indeed in the first trial the little motor developed too much strength and broke the wings, putting a stop to

If Professor Lilienthal succeeds in perfecting the great invention, the pracicability of which he has already dem onstrated, and in making aerial navigation on the simple principles favored by the birds safe for mankind, he will have achieved a notable triumph over the wonderful forces of nature as well as the world's greatest scientists. And he seems very likely to succeed, unless he should grow careless in handling his experimental wings and perchance fall victim to the awful fate which overtook the lamented and legendary Icarus, the first man who attempted to fly.-Chi-

THE BALLOON CYCLE.

The Latest French Army Means of Carrying War Dispatches

There floated over the hamlet of Villeneuve la Garenne the other afternoon in midair a balloon. Suddenly it appeared to burst and fell rapidly toward the earth. Fearing that a disaster had occurred, the terrified folk ran to the spot at which they expected the aerostat would reach the ground, when to their ent they saw a parachute detach itself from the car and descend gently. Immediately the earth was touched one of the passengers jumped upon a small bicycle which he had brought with him from the aerial regions, and he disappeared in the direction of Levallois, in the neighborhood of Paris, as rapidly as

the machine could carry him. The explanation of this singular of currence is simple. The balloon was the Caliban, and the ascent was made from Levallois by Captain Capazza and M Hervieu, the latter being the cyclist. Their object was to test the possibility of a balloon being used for carrying war ispatches, and they assumed that an my succeeded in destroying it. Yet they proved that by means of the paraite they would be able to make good their escape and to outdistance their pursuers with the aid of the portable bicycle. - London Telegraph.

> INGRATITUDE OF NATIONS. An Instance of It Toward a Hero of the Franco-German War.

A pathetic story of national ingratitude has been going the rounds of the London papers, which is interesting enough to be repeated, especially as it cerns those days of intense interest during which Paris was last in siege. Publicity has been given it by the fact that the hero of the incident has just gone into a French hospital in poverty, there to die. The Pall Mall Gazette thus tells the tale: When the German lines in the au-

tumn of 1870 were gradually closing their boa constrictor grasp round the doomed capital, Durnof was the hero of Schenectady, N. Y., for 50 cents per the hour. An experienced aeronaut, who box, or six boxes for \$2.50. Hurst comes of had three times been dashed into the an old Maryland sea and had run many other narrow esborn at Ware tune, to carry a mail out of Paris and to run the gantlet of the beleaguering armies. At daybreak on Sept. 23 he set out on his adventurous journey, the director of the posts assuring him as he handed in the dispatches and the pigeons that his courage and devotion would meet with a splendid reward. Durnof succeeded in his task and landed safe and sound at Evreux, but the poor old Neptune was never fit for another as-

> Twenty-two years elapsed, but the unhappy aeronaut never received a penny from successive governments. Even his claim for the value of his balloon, which had been used till it was destroyed by the military authorities. failed to obtain the slightest recogni tion. After a couple of decades he got the bronze medal accorded to all who carried dispatches by balloon, and last year a small monthly grant was made, which barely sufficed to keep him from starvation. Swindlers and impostors of all kinds laid the foundation of future fame and fortune in the siege of Paris, but the first man who opened up communications between the imprisoned inhabitants and the outer world seems likely to die in dishonor and despair.

The last census of Chile furnishes some interesting statistics relative to longevity of certain representatives of the human race, who live in that far away corner of "Latin" or "Spanish" America. According to the figures in question, in the 23 provinces of Chile the enumerators found 211 men and 273 women who had passed the century the lava fell 270 feet in 12 hours, causmilestone. One man, Rafael Munoz of Colchaqua, was returned as being 150 signifing about eight acres of the floor years of age. The oldest woman was of the crater. The falling of the banks found one man 135 and two women 132, night and produced a sight indescribaone man 130, one over 127, one woman bly grand -- Honolulu Letter. 125 and three men and four women 123, one man 122 and three women 121; 20 women and eight men gave in their ages as 120, and two women acknowledged to being past 119; five women and three men were at the 118 mark. Of all the others over 100, 240 were women and 195 were men. The most remarkable exhibit in the whole array is the one which shows that 53 women and 38 men gave in their ages as 110.-St. Louis Republic.

Diamonds In the Meteors. Professor Berthelot has pointed out that in the writings of Avicenna there is mention of a metallic aerolite which fell in Djorjan, in central Asia, in the leventh century which could neither be broken nor worked up into arms or tools. One of the blocks of native iron found at Ovijak, in Greenland, in 1870, is so hard that it can neither be scratched nor cut, and Professor Nordenskjold suggests that this may be due to the presence of black diamonds disseminated through the iron.

Boat Propelled by a Turbine Wheel. Several trials have been made on the Elbe with a boat propelled not by the ordinary screw, which replaced the pad dle whiel, but by means of a turbine wheel. The inventor, Herr Zenner, states that a much greater speed can be obtained than with the screw, because the friction is much less. Three boats have already been constructed on this

RENEWAL OF YOUTH

A STRANGE STORY FROM A NE-BRASKA VILLAGE.

Villagers Excited Over the Increased Vigor of the Older Inhabitants -Experience of Two "Vets."

From the World Hersid, Omaha, Neb.1 A World-Herald reporter was attracted by the evidence of renewed activity of some of the older inhabitants of the village of Bruce, a suburb of Omaha, Neb., and inquired the cause Mr. Andrew Finkenkeler, who was a member of Company B of the First Iowa Volunteers during the war, made the following explanation so far as he himself is concerned:

"In July, 1866, while my company was on the march through to Austin, Texas, I was attacked with rheumaism of the worst kind in one leg, at Alexander, Louisiana. Being weak, I was sunstuck and remained unconscious for several hours. Every sumthe heat of the sun, and have been compelled to give up my work. There was in my head a bearing-down feeling, which increased until it seemed my head would burst, and it caused a ringing in my ears, and palpitation of the heart set in, so that the slightest noise would set my heart thumping. ner since I have been unable to stand noise would set my heart thumping Several times it has rendered me unconscious for from seven to ten hours at a time. In addition to this the rheumatism extended up my entire ide until it drew my head down on my shoulder. I lost my strength and

flesh and was totally unfit for work. "For twenty-eight years I have consulted physicians and taken their prescriptions without deriving any mater ial benefit. My ailments increased in intensity until I was assured that there was no hope for me. During last year I went into the butcher business, but the dampness from the ice used increased my rheumatic pains to such an extent that I was not only compelled to quit the business, but was confined to my house and bed for nearly six "In November last I read in the

World-Herald a case of a man who had been entirely cured from the ailments from which I was suffering, by the use of Dr. Williams' Pink Pills for Pale a box. In a week I was astonished to know that I felt better than I had for on the disorders that caused her death. gan to lessen in volume and finally left me. The pain from the rheumatism gradually left me, so that within one week from the time I took my first pill I was able to sit up in bed. On January 1st I was able to go out and walk around a little. The palpitations of my heart entierly ceased. On February 9 I was so thoroughly cured that I accepted a position as night watchman in the Forest Lawn cemetery, remaining out of doors from 6 P. M. until 6 A. M. I have gained in weight from 144 pounds, which I weighed in November last, to 172 pounds, which I weigh now.

For nerve building and for enriching the blood Pink Pills are unexcelled. They may be had of druggists or direct from the Dr. Williams' Medicine Co.

"What is the probable loss from the fire on pine stumpage throughout the was asked of a leading logger. state? "The loss is in one sense nominal," replied he. "You understand, fire does of burn the body of a pine tree. It only burns off the bark and foliage. The trunk of the burned tree is as good as ever it was, with this exception-the tree, after it is burned, must be cut the succeeding winter, else it will become

worm eaten and worthless, "This fire is a blessing in disguise to labor. Every owner of burned pine stumpage must go to work this coming winter and cut every foot of it, and many of these owners are forced to cut perhaps bundreds of millions of feet of stumpage they would not otherwise have cut for years to come. They are, you see, forced to employ immense crews of men they would not otherwise have had use for. "-St. Paul Globe

The Record Price For Pictures.

Eleven thousand guineas (something over \$55,000) is now the record price paid in an auction room in London for a picture. This amount was realized at Christie's for Sir Joshua Reynolds' portrait of Lady Betty Delmse, sister of the Earl of Cartisle, with her children, a picture which is well known through engravings. It was put up at 5,000 guineas and was secured by Charles Wertheimer, a dealer, for 11,000 guineas. - London Standard.

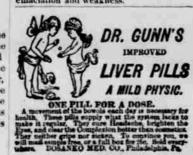

The Crater Collapsed. The great lake in Kilauea overflowed its banks on July 8, and on the 12th ing the banks to fall in on all sides and 138. Of the other "old timers" they was going on all day and far into the

of Consumption is stopped short by Dr. Pierce's Golden Med-ical Discovery. If you haven't waited beyond reason, Although by many believed to be incur-able, there is the evidence of hundreds of living witnesses to the fact that, in all of living witnesses to the fact that, in all its earlier stages, consumption is a curable disease. Not every case, but a large percentage of cases, and we believe, fully 98 per cent. are cured

by Dr. Pierce's Golden Medical Discovery. even after the disease has progressed so far as to induce repeated bleedings from the lungs, severe lingering cough with copious expectoration (including tubercu-lar matter), great loss of flesh and extreme emaciation and weakness.

DEAFNESS CANNOT BE CURED

By local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure Deafness, and that is any constitutional remedies. Deafness is caused by an inflamed condition of the mocous lining of the Eustachian Tune. When this tube gets inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed Deafness is the result, and unless the inflammation can be taken out and this tube restored to its nortaken out and this tube restored to its no

SUPERIOR W'ORKMANSHIP In Every Detail.

These engines are acknowledged by expert engineers to be worthy of highest commendation for simplicity, high-grade material and superior workmanship. They develop the full actual horse power, and run without an Electric Spark Battery; the system of ignition is simple, inexpensive and reliable.

For pumping on fits for irrigating purposes no better engine can be found on the Pacific Coast. For hoisting outfits for mines they have met with highest approval.

For intermittent power their economy is up
