POTASH in the form of carbonate or in ashes, acts more rapidly than in the form of sulphate or muriate. Muriate acts with a little greater rapidity than sulphate, but the difference in availability between the different forms of potash is not nearly so strongly marked as in case of the different forms of nitrogen.

PHOSPHORIC ACID in the form of soluble phosphate of lime (acid phosphates, superphosphates) acts most rapidly. It acts less rapidly in the form of reverted or precipitated phosphate of lime, and least rapidly in the insoluble form, such as ground rock.

Scott's Emulsion of Cod-liver Oil, with Hypophosphites, is one of the best fuel-foods. The cod-liver oil obtains its oxygen from the air and heat is produced. It warms, nourishes, invigorates, gives good blood, and fortifies against the piercing winds of fall and winter.
