

Sit up in bed.

When it becomes necessary to sit up in bed to get your breath; when the least exertion such as walking, sweeping, singing, talking or going up and down stairs, causes shortness of breath, fluttering or palpitation; then it is time to do something to brace up and strengthen your failing heart. Take Dr. Miles' Heart Cure. It is best of all.

"I could not rest at night and often had to sit up in bed to breathe. The least exertion would make my heart palpitate dreadfully. Our doctor prescribed Dr. Miles' Heart Cure and it completely restored me to health."
Mrs. E. C. McKelvey,
Palin, Tenn.

Dr. Miles' Heart Cure

stimulates the digestion, increases the circulation and makes weak hearts strong. Sold by druggists on guarantee.

Dr. Miles Medical Co., Elkhart, Ind.

Y. M. C. A. Notes.

A free social entertainment will be given in the parlors of the Young Men's Christian Association on Saturday evening at 8 o'clock, to which all are cordially invited to attend. Some literary and musical productions will be rendered, after which Mr. Wilson will give an exhibition of Indian club swinging. Following this will be some light gymnastic exercises, and in conclusion there will be a game of indoor baseball between the business men's and the evening gymnasium classes. An interesting time is promised all who are present.

Last evening a ladies' gymnasium class was organized and next Tuesday it will meet again. All ladies who would like this kind of work are invited to talk with the general secretary or the physical director for the details. A large interesting class is predicted and hoped for.

Rev. A. J. Montgomery will speak to the young men next Sunday afternoon at 3:30. All men are requested to be present at this meeting. That day will be the beginning of the week of prayer. Special services are being arranged for each evening of the week. A Personal Workers' Bible Class was organized last evening under the leadership of Mr. Montgomery, and recruits are earnestly solicited at any time. The class will meet each Tuesday evening.

The Maccabees have assured the Y. M. C. A. that the Chickering piano shall be given to it in case the lodge is the successful contestant. Of course in that case the Association is very anxious that all friends of the institution shall assist as far as possible in bringing in votes, as a vote for the Maccabees is a vote for the Young Men's Christian Association.

The Kind You Have Always Bought

THE HOME GOLD CURE.
An Ingenious Treatment by which Drunkards are Being Cured Daily in Spite of Themselves.

No Noxious Doses. No Weakening of the Nerves. A Pleasant and Positive Cure for the Liquor Habit.

It is now generally known and understood that Drunkenness is a disease and not weakness. A body filled with poison, and nerves completely shattered by periodical or constant use of intoxicating liquors, requires an antidote capable of neutralizing and eradicating this poison, and destroying the craving for intoxicants. Sufferers may now cure themselves at home without publicity or loss of time from business by this wonderful "HOME GOLD CURE" which has been perfected after many years of close study and treatment of inebriates. The faithful use according to directions of this wonderful discovery is positively guaranteed to cure the most obstinate case, no matter how hard a drinker. Our records show the marvelous transformation of thousands of Drunkards into sober, industrious and upright men.

WIVES CURE YOUR HUSBANDS! CHILDREN CURE YOUR FATHERS! This remedy is no sense a non-temper but is a specific for this disease only, and is so skillfully devised and prepared that it is thoroughly soluble and pleasant to the taste, so that it can be given in a cup of tea or coffee without the knowledge of the person taking it. Thousands of Drunkards have cured themselves with this priceless remedy, and as many more have been cured and made temperate men by having the "CURE" administered by loving friends and relatives without their knowledge in coffee or tea, and believe today that they discontinued drinking of their own free will. DO NOT WAIT. Do not be deluded by apparent and misleading "improvement." Drive out the disease at once and for all time. The "Home GOLD CURE" is sold at the extremely low price of One Dollar, thus placing in reach of everybody a treatment more effective than others costing \$25 to \$50. Full directions accompany each package. Special advice by skilled physicians when requested without extra charge. Sent prepaid to any part of the world on receipt of One Dollar. Address Dept. 3594, EDWIN B. GILES & COMPANY, 2330 and 2332 Market Street, Philadelphia. All correspondence strictly confidential.

IN THE CIRCUIT COURT.

Continued from page 1.
Jared Karstetter vs Elmer Hardesty; judgment and order of sale.
Dimick & Eastham vs Helen Robinson; settled.
William Pittman vs Cumins & Cole; dismissed.
Coolidge & Co. vs O. H. P. Chalmers; default and judgment.
P. T. Davis vs Frank Newell, et al; settled.
Margaret Barrett vs William Knight, et al; settled.
Theodore Wyant vs Dwight Muzzie; passed for service.
J. G. Becker vs Sibilla Nuchell et al; argued and submitted.
James H. Bogges vs W. R. and Mary Wade; demurrer sustained.
The divorce suits of Annie vs Melchior Heller and Annie vs James S. Smith were settled.
James Murphy, executor, vs George Leat, et al; decree for plaintiff.
James Humphrey vs George P. and Mary Leat; decree.
P. J. Ridings vs Henry Meldrum; settled.
Samuel Roake vs Southern Pacific Company; on stipulation dismissed without costs.
J. S. Kirchem vs C. S. Phelps; dismissed.
Margaret Barrett vs William Kueck; dismissed.
Preston Pendleton vs Bauman; dismissed.
B. H. Bowman vs Silvey Stuart, et al; foreclosure ordered.
Mary E. Denly vs C. N. Wait; judgment for plaintiff.

Decrees of divorce have been granted in the following suits: Hattie vs George Clark, Mamie A. vs C. G. Simmons, Bertie vs Conrad Gaunkel, Maggie vs Frank Johnson, W. H. H. vs Mary E. Blaney, Annie E. vs Lester Busby.
The assault case against Bert Jewell was continued until the next term on account of the absence of material witnesses.
Perry E. Polk was indicted for robbing a slot machine in Kambo's saloon last August, and the jury returned a verdict of guilty. Time was given until Friday for notice of appeal.

On Tuesday afternoon the petit jury was dismissed from further service until next Monday.
In the suit of August Krausse vs. the Oregon Iron & Steel Company a motion for a modified decree was argued.

In the suit of J. T. Apperson vs. T. L. Charman, trustee, the plaintiff was given time to file an amended complaint.

The grand jury was still in session at the latest report.

Carrying Banners For Official Honors.

Candidates for county nominations before the republican conventions next spring are looming up like hop houses in the fog. Heart to heart talks among candidates and politicians are of frequent occurrence. Voters are being cautiously button-holed from the various precincts, and considerable rustling is going on in spite of the fact that it is several months yet before the conventions convene. The probability that George A. Steel may get the appointment as register of the Oregon City land office will still further make the chances slender for Clackamas county to get a place on the state ticket. Among the candidates mentioned are the following: For state senator—George C. Brownell, Fort joint senator—A. S. Dresser, H. E. Cross, L. L. Porter.

Representatives—O. L. Barber, Elliott Prairie; A. M. Vineyard, Canby; Richard Scott, Milwaukie; C. H. Dye, Oregon City.

County judge—Judge Ryan and Mayor Dimick, of Oregon City.
Sheriff—J. R. Shaver, of Molalla, and John Gibson, of Milwaukie.

For clerk W. M. Shank is prominently mentioned for the nomination, and J. W. McAuliffe is also mentioned as a candidate.

For treasurer—E. P. Carter, of Wilhoit, and F. A. Fleight, of Canby.
Assessor—N. Blair, of Elliott Prairie; Cook, of Clackamas, and J. C. Bradley, of Oregon City.

Recorder, Henry E. Stevens, of Milwaukie, and E. P. Dedman, of Clackamas.

Commissioners—W. H. Mattoon, of Viola, and J. R. Morton, of Damascus. Oswego is also said to have a candidate. No names have yet been mentioned for coroner.

TO THE PUBLIC.
Allow me to say a few words in praise of Chamberlain's Cough Remedy. I had a very severe cough and cold and feared I would get pneumonia, but after taking the second dose of this medicine I felt better, three bottles of it cured my cold and the pains in my chest disappeared entirely. I am most respectfully yours of health, Ralph S. Meyers, 64-Thirty-seventh St., Wheeling, W. Va. For sale by G. A. Harding.

Only a Few of the Kind.
It is extremely probable that you love good singing and dancing, don't you? There is a sumptuous feast in store for you then. All that heart could desire in that line will be given in "A Wise Woman."

A LIBERAL OFFER.
The undersigned will give a free sample of Chamberlain's Stomach and Liver Tablets to any one wanting a reliable remedy for disorders of the stomach, biliousness or constipation. This is a new remedy and a good one. G. A. Harding.

Notice to Debtors.
I herewith notify all persons indebted to me for livery hire to pay without delay. Accounts remaining unpaid by the end of this month will be placed in the hands of a collector, when costs will be added.
J. C. BRADLEY.

"Last winter an infant child of mine had croup in a violent form," says Elder John W. Rogers, a Christian Evangelist, of Filley, Mo. "I gave her a few doses of Chamberlain's Cough Remedy and in a short time all danger was past and the child recovered." This remedy not only cures croup, but when given as soon as the first symptoms appear, will prevent the attack. It contains no opium or other harmful substance and may be given as confidently to a baby as to an adult. For sale by G. A. Harding.

WHEN TO CUT CORN.

How to Use It to Best Advantage. Cutting and Shocking.

An unusually large amount of corn will be cut this fall. The shortage of pasture made it necessary for many farmers to begin feeding in July. This long season will require an immense amount of forage, and as corn will be exceedingly scarce farmers will depend more than usual upon the fodder crop to carry their animals through. As a general rule, green fodder, particularly this year, is more valuable fed directly after cutting than at any other time if it is sufficiently mature to make good forage. In view of all this The American Agriculturist advises as follows:

The wise farmer therefore will utilize his corn crop to the best advantage. If he has stock that can be fattened on the whole corn plant before frost or at any rate partly fattened before that time, he will cut his corn now and feed it at once. If he can get his cattle or sheep to market before frost comes, they will be more profitable than if he simply keeps them in good flesh, cuts and cures his corn and attempts to fatten them this winter when they are a little older.

Where corn is intended for fodder it should be allowed to mature fairly well before cutting is started. However, if a great deal is to be taken care of begin cutting when it is still on the green order. Cut about one-half a shock, allow to cure a day or two, then cut the remainder. This will result in a fodder highly digestible, although not quite so heavy as it would have been had it remained uncut a week or so longer. If possible, the cutting should be delayed until the lower blades have died and the kernels are well dented. In other words, it should be well advanced in the dough stage.

The size of the shock will of course depend upon the character of the corn and somewhat upon the practice in the locality. In the central west shocks sixteen hills square seem to be favorites, but farther east smaller shocks, ranging all the way from eight to twelve hills square, are most common.

This year the corn is short and can be handled very easily with a corn binder.

GATHERING SUGAR BEETS.
The Effect of New Fall Growth on the Sugar Content.

The time of harvesting sugar beets is governed by the time of the ripening of the beets. This ripening is made apparent by the outside leaves of the plant taking on a yellowish tinge and drooping to the ground. An experienced eye soon learns to detect a field of ripe beets that is ready for harvest, the whole field being colored to this yellow tint and the leaves showing this drooping tendency peculiar to the matured plant. The beets have now finished their work, and the next step of the grower must be governed by his locality. If he is in a locality where there is a probability of rain, the beets must be harvested and placed in silos. This would be the case in most of the sections where rain conditions prevail, such places usually having strong rains in September and October, followed by more or less warm days. The effect of the rain will be to cause the beets to begin growing again, and new leaves will soon be noticed starting out, as well as new lateral roots from the beet in the soil, all the beets showing a general tendency to a second growth. Serious damage to the crop will soon be done in this way. The sugar content of the beet goes down materially, and its impurities increase, so that if the rains are marked and followed by warm days it is possible for a whole crop to be lost, so far as their fitness for factory purposes is concerned.

Root Storage.
Where there is no barn cellar for the storing of roots a place such as is shown in the cut from The Farm Journal can be extemporized by double boarding a boxlike space at the side of the barn floor in the hay bay. This place should extend down to the ground, cutting through the floor of the bay, and double the space below. Use cedarboards.

A PLACE FOR ROOTS. For the lower part and bank the earth well about them on the outside. Leave an air space between the boarding and do the same with the front that shows in the cut. Bank the outside of the barn if the underpinning is open.

News and Notes.
Farms are getting smaller; the average size in 1850 was 203 acres; in 1880, 137 acres.

Missouri entomologists strongly assert that moth catchers or lantern traps do more harm than good in orchards, as they catch more friends than enemies of the fruit grower.

Through fire, the foremost enemy of the forests of North America, and through the fratricidal lumbering practiced by many, the destruction of the forest cover of the United States goes on.

The potato crop is thus far very short. Potatoes are likely to be scarce and dear unless the later crop shows up unexpectedly well.

Rape may be fed to best advantage in the early fall, and hence is of valuable assistance in fattening lambs for the fall or early winter.

Indian Runner ducks are attaining a good degree of favor just now among fanciers and by them are recommended to farmers and other practical folks on account of their great prolificacy, says Farm Journal. They are bright, trim, active little creatures and are said to have great ability to take care of themselves.

FARM AND GARDEN

CONCERNING SILAGE.

It Has an Important Field of Usefulness on the General Farm.

Corn, from the ease with which it can be converted into silage, is perhaps entitled to stand at the head of all forage plants for this purpose. The solid stems, flat leaf and proper ratio between its liquid and solid constituents seem to favor it for this work. The plant, however, is comparatively poor in protein.

Of the legumes clover is probably the most valuable plant both for hay and silage. Its heavy yield, richness in protein and soil renovating qualities will command the attention of all progressive agriculturists. Clover, with the possible exception of alfalfa, can probably be grown and placed in the silo at a lower cost than any other forage crop.

Vetch is another valuable legume. It will thrive in a greater variety of soils than clover and can be sown as a catch crop either in the spring or fall. It is very palatable to stock and about equal with clover in nutritive principles and adaptability for silage.

Alfalfa is also a good silage crop. This plant under favorable conditions will yield a crop representing perhaps a greater value per acre than any other forage crop grown. With the silo this crop can be made of inestimable value to the dairying and stock growing industry in semi-arid sections.

Field peas make a good silage crop. They are rich in protein, but stock do not relish them quite so well as clover and alfalfa. Some unsatisfactory results have followed attempts to ensile peas and vetch when grown with grain. While the grain will materially aid in holding the vetch and pea up, thus facilitating the harvesting of the crop, too large a proportion of grain is undesirable when the crop is to be ensiled. The hollow stems of the grain carry more or less air into the silo, which is thought to accelerate fermentation and consequent deterioration of the silage.

The best forage plants for silage are generally those with solid stems and which carry over 20 per cent of solid matter in their physical structure. Very succulent plants, such as cabbage, rape and immature corn, clover, alfalfa or vetch, when carrying much less than 20 per cent of solid matter, are unsuited for silage.

Recorded results of a large number of experiments with silage warrants the conclusion that plants are in the best condition for silage when they are fairly well matured. Corn is seemingly in the best condition for the silo when the kernels are nicely glazed, just after the roasting ear stage.

The problem of sweet and sour silage continually comes up, and much the orizing has been indulged in. That some silage is exceedingly sour is a well known fact, but the cause of this condition is not well known. Results obtained from experiments seem to indicate that there are at least two conditions which favor the development of organic acids in silage—i. e., immaturity of the plants and extreme compactness of the silage. A good example of the former is shown in immature corn silage.

Corn silage which though extremely acid was exceptionally well preserved, possessed an agreeable odor, and cows ate it with avidity. There were no appreciable harmful results from feeding this exceedingly sour silage. The period of feeding, however, was brief, only extending over two weeks.

The first cut represents a dry Short-horn cow which from Jan. 1 to May 1 was fed daily, without grain, 40 pounds of clover silage and what mixed clover hay she would eat up clean. This cow not only retained her excellent condition on the above ration, but made a satisfactory gain in live weight.

The second cut represents Cotswold ewes which were taken off from rape and clover pasture Dec. 1, 1900, and put on clover silage, mixed hay and a light ration of grain. This was fed until March 15, 1901, when they were photographed. The illustrations are introduced simply to show that silage has an important field of usefulness on the general farm.—J. Withycombe, Oregon Station.

Consequences.
A woman threw a paper out on the roadside, and the consequences were a buggy ruined, a young horse spoiled, a child crippled for life.

A man lit a match in a barn, and the consequences were the barn was burned, the stock roasted, the grain a total loss.—Farm Journal.

Apples are likely to be fine property this fall.

SHEEP FED ON SILAGE.
was fed daily, without grain, 40 pounds of clover silage and what mixed clover hay she would eat up clean. This cow not only retained her excellent condition on the above ration, but made a satisfactory gain in live weight.
