Grain sowing is mostly over in this locality. Such early sowing should insure good crops.

There is quite a large average of vetches, which is becoming a favorite crop.

The price of seed is now 6 cents per pound. Why do not our large farmers see it to sell and supply the demand. Vetches or tares as they were called in other times, seem to be well adapted to Oregon soil and climate and make hay that is richer than clover and better relished by stock.

Consumption

The only kind of consumption to fear is "neglected consumption."

People are learning that consumption is a curable disease. It is neglected consumption that is so often incurable.

At the faintest suspicion of consumption get a bottle of Scott's Emulsion and begin regular doses.

The use of Scott's Emulsion once, has, in thousands of cases, turned the balance in favor of health.

Neglected consumption does not exist where Scott's Emulsion is.

Prompt use of Scott's Emulsion checks the disease while it can be checked.

I go about my business all day long and it doesn't worry me. I have a good appetite, and can eat and get around on foot as active as when I was a boy. My age is 65 years."
