**THE HOOVER POTATO DIGGER**

**Digs Them All and Digs Them Right**

No farmer would ever return to the old method of digging potatoes after he has once used a Hoover Digger. This digger gets them all. It does not chop or scrape the potatoes but leaves them clean on top of the rows. It is an extremely light draft machine and is exceptionally well made. We also have in stock the Hoover Picker Digger a machine which not only digs potatoes but deposits them in a box or crate fastened to the machine and saves the labor of picking up the potatoes. These are machines which ought to be of interest to every potato grower. Let us know if you are interested and we will send you our catalogue and circulars.

**Afraid of Ghosts**

Many people are afraid of ghosts. Few people are afraid of germs. Yet the ghost is a fancy and the germ is a fact. If the germ could be magnified to a size equal to its terrors it would appear more terrible than any fire-breathing dragon. Germs can't be avoided. They are in the air we breathe. The germ can only prosper when the condition of the system gives it free scope to establish itself and develop. When there is a deficiency of vital force, languor, restlessness, a sallow cheek, a hollow eye, when the appetite is poor and the sleep is broken, it is time to guard against the germ. You can fortify the body against all germs by the use of Dr. Pierce's Golden Medical Discovery. It increases the vital power, cleanses the system of clogging impurities, enriches the blood, puts the stomach and organs of digestion and nutrition in working condition, so that the germ finds no weak or tainted spot in which to breed. "Golden Medical Discovery" contains no alcohol, whisky or habit-forming drugs. All its ingredients printed on its outside wrapper. It is not a secret nostrum but a medicine of known composition and with a record of 40 years of cures. Accept no substitute—there is nothing "just as good." Ask your neighbors.

**New Potato Pest.**  
A new kind of potato bug has appeared on some farms about seven miles north of Albany and has proven very destructive in the few patches it has attacked. John Morehead, a farmer living on R. F. D. No. 2, from this city, brought some samples of the bug to Albany and is endeavoring to find out its name, but thus far no one has been found who has ever seen such an insect.  
The bug is black in color and has the appearance of an ant, but flies well. It attains the size of about half an inch in length and is very hardy and multiplies rapidly. The bugs bite off the blossoms on the potato vines and then attack the plant, killing it quickly.—Albany Herald.
