DUAL PURPOSE STOVE. Combination Range and Fireplace invented by England's King. England's king has joined the list of royalties who have now and then proved their ability as inventors, says Popular Mechanic. The invention of King George V. is a combined kitchen stove and dining room fireplace, designed to be placed in the wall separating the dining room and kitchen. After the meal is cooked the grate in the kitchen is transferred, with its charge of burning coal, into the dining room fireplace simply by the operation of a lever. The idea of such a cooking and heating combination is said to have come to King George after he assisted, as THE KITCHEN RANGE PORTION. THE FIREPLACE PORTION. Prince of Wales, in the formal opening of a settlement of cheap apartments for workmen's families, founded in Chelsea in 1908. The stove has just been patented in Germany, the German crown prince acting in the matter as the agent of King George.

CITIES JOIN NATIONAL SWAT THE FLY MOVEMENT. Offer of 10 Cents For 100 Flies Brings Results. The Anti-tuberculosis league of Nashville, Tenn., inaugurated a fly campaign in which it offered 10 cents a hundred for dead flies brought to the offices of the organization between 3 and 4 p. m. for the week beginning May 1. Consignments were paid for in lots as small as ten, and many of the youngsters of the city who had probably never heard of the Nashville Anti-tuberculosis league were able to pick up a few extra pennies by chasing the ubiquitous household pest with the implements at hand. In answer to an offer of the city to pay a reward of a cent for every ten flies delivered dead at the city hall school children of Cleveland are "swatting the fly" with vim and vigor. The crusade will continue for two weeks, when the offer expires. The city health officials believe that every fly killed at this season of the year means the absence so to speak, of nine flies later; hence the posting of the reward. Complimentary legislation for spraying breeding places of flies was urged at a recent executive board meeting of the Anti-tuberculosis society of Grand Rapids, Mich. It is probable that the society will ask the common council to pass the necessary measures to obtain this result. Numerous endorsements of the proposed ordinance have already been made by organizations of the city. Among the first bodies to support it were the Trades and Labor council, local union No. 335 of the United Brotherhood of Carpenters and Joiners of America and the Building Trades council.

MAKE A SPOTLESS TOWN. A Few Rules For Those You Want to Help. First—Take away all the ashes and dirt from your back yard immediately. Send your rubbish to the dumping ground. Second—Clean out your cellars, stables and sheds. Whitewash your cellar walls, fences and henhouses. Third—Burn all rubbish that will burn. Clean your vacant lots and alleyways. Fourth—Avoid mixing ashes and garbage. This is against the law. You may be fined. Fifth—Refrain from throwing old paper, banana or orange skins into the streets. Sixth—Plant some grass and flower seeds to make your home beautiful. Every house should have a little green grass and a few trees. Seventh—When you have cleaned up once, keep your yard clean all the time. Dirty yards cause flies, sickness, and death. Old tin cans hold water; water breeds mosquitoes. Rotten garbage makes bad air, bad air makes weak bodies, weak bodies make big doctor's bills. New Sewerage System. The new sewerage system of Clearwater, Fla., has been completed, turned over to the city and accepted. The system has been installed under expert supervision and is particularly up to date.

Test For Fire-damp. One of the simplest of the many suggested tests for fire-damp in mines is that described to the Scottish Society of Arts. It is an attachment that may be applied to any oil or spirit safety lamp and consists of a loop of copper wire supported on a brass rod passing through the oil vessel. To make a test the loop is moved into the flame. This becomes instantly non-luminous, but if fire-damp is present in the air the gas cap is clearly seen. The test can be made in a moment at any time without turning down or putting out the light. It is claimed that the percentage of fire-damp this method will detect is exceedingly small, and the results of trials in both laboratory and mine go to show that this is one of the most sensitive, accurate and expeditious means of revealing the presence of inflammable gas in mine or other air.
