There is no mystery about good oil

It must be made from crudes carefully selected for their "oiliness" and stability. These crudes must be refined to preserve their original characteristics and to make them pure.

In selecting crudes for Zerolene the Standard Oil Company has the advantage of its own large production of practically every type of crude. The company is not compelled to use any particular crude because it happens to be the only one available.

Crudes selected for Zerolene are brought to our refineries in special pipe lines. They are refined by our own patented, high-vacuum process which preserves their "oiliness" and stability.

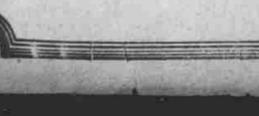

No other refiner on the Pacific Coast uses any form of vacuum distillation. No other refiner in the United States uses as high a vacuum as this company.

Purity Essential
Zerolene oils are pure. This company has always considered the removal of all detrimental properties and compounds as essential in making Zerolene.

Because of their "oiliness," stability and purity, Zerolene oils give perfect lubrication, and permit the development of the maximum power, speed and gasoline mileage of the car.
