Hazelia Community Sunday School Notes

The time has come when the Sunday school in country places is throwing off its denominational differences and is so co-operative and helpful in spirit that it has become a vital part of the community life.

It has caught the vision of bigger and better things. It sees the spiritual value of good goods and advertising them thru personal work. It must move along in step with the progressive ideas of its young people or lose them. A community Sunday school works for the best good of the most people it can touch, which takes in our neighboring communities who have no Sunday school, as well as our own immediate neighborhood. We want them to feel it is their Sunday school also.

The special service Sunday, November 26th, will be a Thanksgiving service, with a good speaker and special Thanksgiving music. Let's show our gratitude for the blessings of life by coming to the school house to this service.

The Hazelia community Sunday school service every Sunday at 10:00 o'clock a. m. Special service November 26th at 11:00 a. m.

CHERRYVILLE Parnell Averill

The fall rains have set in. V. A. Peacock came up from southern Oregon, Saturday. W. G. Webber came over the mountains from Pendleton last week, on a visit and to transact business. Jim Dixon's road crew came out this week from work near Government Camp. Mr. and Mrs. Lehnfeld spent Sunday with Mr. and Mrs. Life Green. The Lehnfelds own a ranch near Sandy. They have over an acre of carrots that are unusually fine. A woman's club was started here last week at Mr. and Mrs. Tuschler's. Mrs. Parnell Averill was elected president. Bear tracks were seen near the church here, last week, but nobody got a glimpse of brute, however. Meeting at the church next Sunday at 3:00 p. m. Mr. Bernman will speak. Messrs. Gibson and Nelson's Leghorn pullets are laying well in spite

of the weather. Eggs at 50 cents pay a profit. Now that the elections are over we will get back to "normalcy." Mr. and Mrs. August Beldenstein, who have been up to Dixon's camp all summer and fall returned home this week. John Tueckher returned also. C. W. Harris and Mrs. Maggie Freel, who were on the grand jury, returned home last week.

AIDS CHILDREN IN HOPPING

Pennsylvania Woman Has Put Forward Ingenious Device Which She Calls Grasshopper Feet.

Adult human beings are rarely seen to skip and hop. It is, however, a form of exercise in which children are wont much to indulge, to the great benefit of their physical development. Encouragement of this form of exercise is offered by the novel invention of a woman, May C. Southgate of New York. It is a pair of mechanical grasshoppers, of giant size, put on like a pair of shoes and fastened by straps and buckles to the child's feet. They have legs of spring steel, terminating in rings which hold rubber feet. A child equipped with these grasshoppers can hop, skip or jump much more actively, and can get over ground quicker, while the rubber feet lessen the shock of alighting and give a delightful sense of lightness.—Philadelphia Ledger.

Gold Film Is Transparent. Gold 1-2,798,000 of an inch thick, or 10,584 times thinner than the ordinary sheet of printing paper has recently been produced. One grain of the precious metal of this thickness covers nearly four square feet of area and is perfectly transparent.

The process of obtaining the thinnest film is to cut a sheet of copper to a determined size and place it in an electric bath, where sufficient gold is deposited on one surface of the plate, to produce the finest gold color discernible. To separate the film of gold from the copper, the gold-plated copper strip is immersed in a weak solution of nitric acid for several days. The copper is entirely dissolved, leaving the film of gold floating on the surface of the liquid. The film is then collected on a glass plate.—Popular Science Monthly.

Mount Everest.

According to the latest determination of the Indian survey, the height of Mount Everest is 29,141 feet. It is the highest ascertained point on the surface of the globe. The greatest Himalayas present such difficulties that climbers have been compelled to refrain from attempting to reach their greatest heights, as well as from the fact that the effects of altitudes are not yet fully understood. The greatest mountain heights yet reached are 24,000 feet, by the duke of the Abruzzi during his expedition to the western Himalayas, and 24,000 feet by Norwegians on Kabru, one of the mountains near Darjeeling.

Kidding the Doctor.

The doctor was ready to leave, and was congratulating the father on the advent of the new baby, when a burly billigout went tearing by in hot pursuit of a dog. The father blurted out in very undignified English: "Drat that goat! I shall have to sell him. Doctor, would you like to buy him for your boys?" "I don't know," said the doctor. "What do you want for him?" "Well, how much is your bill?" "Fifty dollars." "Then you ought to give me sixty for the goat. A full-grown goat ought to be worth more than a kid."

She Answered Her.

An austere woman was lecturing a body of high school girls in a Hoosier town recently on the uselessness and wickedness of the flapper. After she had said that they were not fit to become the mothers of the next generation, she looked at a bobbed-haired little girl who had rouged and powdered her face rather heavily and demanded, "Young lady, what do you know about babies?" For a minute the little flapper looked startled. Then she blushed a fiery red. "Well, lady," she stammered, "I've stopped believing in the stork."—Indianapolis News.

EMPLOYE PARTICIPATION A NEW URGE FOR LABOR

(By the Co-operative Educational Labor Campaign Association.) Participation by employees, and the possibility of the workers becoming substantial owners in industries, is becoming an established and recognized fact in the industrial life of America.

In the clamor arising from loud voices and isolated disturbances, we may not realize it, but we are already in a new era, the era of participation by the worker in the business at which he works, and participation is the antidote of anarchy. Participation is a mutual compact. In its true spirit the employer participates as earnestly as the employed, but to be more exact, the old relations of the boss and the laborer have no place in the new era. They are essential partners.

Enduring benefits resulting from the participation of workers in the business in which they are employed, cannot go beyond the sharing of profits or earnings. To place the management of the industries in the control of those untrained in the administration of such affairs would result in disaster, frustrating the very ends which co-operation is seeking to achieve.

The managers of our great enterprises are the results of the natural process of the selection of the fittest. In our industrial life there is continuously in progress the quest of the best managers, and it naturally follows that those in charge of the management of these concerns are business and financial experts. The most highly skilled artisans, specializing in his particular art, is often ignorant of business, even in its most elemental form. Too frequently the thrifty, industrious workers have been the prey of financial charlatans.

So rapid has been the spread of the co-operative thought that today the majority of our large concerns have some plan by which the workers may become part owners and profit sharers in the business. No general plan or universal scheme of participation is identical. But the plan which has been most effective in practice provides for the purchase by employees on small installments, of capital stock or securities of the properties with which they are identified, giving the employees an opportunity to buy substantial holdings without seriously infringing upon their wages.

The interest on the deferred payments is carried by the concern at ordinary interest rates, but the employee receives dividends at a higher rate, in proportion to the earnings of the property, and consequently acquires a vital interest in the success of the business. An ownership and participation, and a strong incentive for increased production, accompanied by saving, is provided.

Studying the financial reports, attending the meetings of stockholders and becoming fully cognizant of all of the conditions affecting the business, the employee knows the process of production, the cost of material, the point the pay roll can reach without increasing the cost of the product above the market price, or without decreasing the dividends below the point where the stock will attract purchasers for additional development of the business. He knows the problems of the business and is consequently in a position to understand and reason them out on practical and logical lines.

Our constructive problem seems to shape itself along this line: Can the millions of workers in the United States be gradually brought into a partnership in the business which employs them? From the thirty billion dollars which they annually earn, can a substantial portion of the surplus over living expenses, be directly invested in the various activities in which they are engaged, so that the increment of their savings can be unified with the work and intelligence of their lives? When we consider that the wage payments are a large part of the fifty billion dollar annual turnover

CO-OPERATION—A PROPHECY AND A WARNING

(By the Co-operative Educational Labor Campaign Association.)

Every little while we hear a remark something like this: "Isn't it too bad that co-operation is a failure?" We hear many absurd things nowadays and ordinarily it doesn't pay much attention to them. Generally it is best to let them come in one ear and go out the other.

But a remark such as the one just quoted is an exception, such a statement deserves to be handled without mittens.
