

THE DAIRY

SUMMER CHEESE.

Directions For Making It Issued by the Ontario Dairy School.

Aeration and cleanliness should have the same careful attention.

When the milk arrives at the factory, each can should be subjected to a strict examination by the cheesemaker—do not leave this to the poorest help—to detect if possible and reject all bad flavored or tainted milk. There is no excuse for having milk of this kind. What one person can do all can do—care for it properly and have it arrive at the factory in the very best possible condition.

When the milk has been received, heat it up gradually to 86 degrees. When this has been done, try it with the rennet test to ascertain the degree of ripeness. It is advisable to do this even in handling very ripe milk, for it enables the cheesemaker to know just about how fast the curd is going to work. If possible, have the milk in that condition that all the whey will be drawn in from 24 to 3 hours from the time the rennet is added, with a quarter inch acid on the curd by the hot iron test. Use enough rennet to coagulate the milk sufficiently for cutting in 30 minutes.

Start to cut a little early. Take plenty of time, and do not dash or slash the curd. Use the horizontal knife first, finishing with the perpendicular, and if the milk is overripe and going to work fast, as is quite often the case in hot weather, then cut the curd considerably finer. By so doing the cooking process is hastened. The cubes of curd being small they are much more easily cooked than if left the ordinary size. When the cutting is finished, start to stir very gently at first, or until the curd becomes somewhat firm. Do not apply heat for 10 or 15 minutes after stirring is commenced. Heat gradually up to 96 degrees, taking fully one-half hour to do so, unless in the case of fast working curd, which requires to be heated up as quickly as possible to insure a thorough cooking. Continue stirring for some time after the desired temperature has been reached to prevent matting and to insure a more uniform and thorough cooking of the curd.

Draw off part of the whey soon after the heating has been finished, and if there are any bad odors or taints draw the whey down quite close to the curd, then by keeping it stirred and airing well the flavor will be very much improved. Draw off all the whey when the curd shows a quarter inch acid by the hot iron test, and continue hand stirring until it is sufficiently dry before allowing it to mat, and when matted break or cut into convenient strips and turn it over at short intervals (about every 15 minutes) piling a little deeper each time it is turned and never allow any whey to gather on or around it.

Grind early, or when the curd strings 1 to 1½ inch on the hot iron. Keep it apart and well stirred and aired after grinding until ready for salting.

In the case of gassy curd, try to retain more moisture in it when the whey is drawn off by stirring less. Grind it about the usual time, and when it is partly ripe pile deep, and if the whey begins to lodge around it open the pile, allow the whey to drain off, then pile again. Continue in this way until the curd becomes velvety and buttery, when it is ready for salting. Hoop it from 15 to 20 minutes after the salt has been well stirred in.

Apply pressure very gently at first or until the whey begins to run clear, after which it may be safely increased. In from 45 to 60 minutes the pressure may be removed, the hoops taken off, the cheese dressed neatly and put back to press again. Apply full pressure before leaving them for the night.

Turn them in the hoops in the morning, paring off any corners or shoulders which may arise from imperfect fitting followers, putting back to press for five or six hours longer, when the cheese will be ready to take into the curing room, which should be kept as cool as possible during the summer.

We would strongly advise cheesemakers to keep a record of each vat, the condition of the milk, and how it works each day. Stencil the cheese with the date when made, the number of the vat made from, and by so doing a great many difficulties may be overcome.

Keeping Up the Milk Flow.

There is something wrong in the practice of most farmers, viewed from the dairy standpoint. It is permitting cows to dry up at this time of year or soon after and go dry until spring. We have spoken regarding dairy cows and general purpose cows. Let us be misunderstood, we wish to say right here that we do not specify any breed or breeds as good and others as bad. Cows are what inheritance and training and feed have made them.

A cow that has suckled a calf and that descended from a long line of ancestry so kept is not the cow for dairying. She may take first prize at a public three days' test, but before the end of the year she becomes an expensive thing to keep. General purpose cows may be bred and trained away from profitable milking capacity. When we speak of dairy cows, we simply mean those which have been developed and trained in milk giving capacity regardless of breed—conceding the fact, however, that certain breeds have been trained in this direction more than certain other breeds.

Now, the way to spoil any cow is to let her shrink seriously in her milk flow when the calf is 4 or 5 months old. Short feed now means failure to the summer dairy. Generous feed now means an extra 100 pounds of high priced butter. Have good pasture now. We speak from trial. Supplement the pasture if necessary by feeding your oats and green corn to the cows until the fall feed comes on. There is no surer way to lose money than to neglect this.—Creamery and Dairy.

MOTH WORMS.

Directions Given by The American Bee Journal For Destroying Them In Combs.

A few worms in a hive can be taken care of by the bees themselves, especially if the bees kept are Italians. But if the colony is very weak and of black bees the worms may get the start of them.

Brimstone the combs after the bees are all out, but do not forget that when worms have grown to considerable size it takes a great deal of smoking to kill them. Give them twice as much smoke as you think they need. But while you are transferring the combs why not pick out the worms yourself? You can do so with the point of a penknife and leave very little cleaning out for the bees.

Probably some would prefer to use foundation and melt up the old combs. The character of the combs themselves would have something to do in deciding it. Nice, straight, all worker comb might be better than foundation, while crooked combs with a good proportion of drone comb might better be melted up.

Bear in mind that putting wormy combs into a new hive does not insure the continuance of worms. The worms do not multiply, only as moths enter the hive and lay more eggs. So if a strong colony is put upon wormy combs strong enough to prevent moths entering, just as soon as the worms present come to maturity the trouble will be at an end, even if the bees should not succeed in tearing out the intruders.

Top Dressing Grass Lands.

The idea that used to be prevalent that stable manure cannot be spread upon grass lands in summer without great wastage is contrary to the experience of most farmers and is now contradicted by pretty good theoretical arguments. American Cultivator says: At all events don't plow stable manure into the soil in summer. There it has a far more injurious drying effect on the soil than if put on the surface, where it at least serves as a mulch. If manure is spread on grass lands after cutting off the hay crop, it should be rolled so as to press the manure as closely to the soil as possible. If heavy storms come, the rain will leach through this manure and carry some of its fertilizing properties into the soil. Very little ammonia will be lost, as on the surface and scattered there will be little fermentation. The soil under the manure will be kept moist, and the growth of aftermath will give the manure a shelter from the scorching rays of the sun. It is the best possible time to apply manure to grass land that is to be put in hoed crops next season. So after the grass is cut no time should be lost in drawing and spreading on grass land any stable manure that has accumulated since the spring cleaning of the barnyard.

Bordeaux Mixture.
There are several formulas, varying in strength. One strong enough for most purposes is one-quarter pound each of copper sulphate and lime to each gallon of water. For potatoes Paris green may be mixed with this at the rate of one-half pound to 50 gallons. To make the Bordeaux mixture suspend the copper and lime in separate casks of water in coarse gunny sacks and allow them to remain immersed for several hours, or for an entire day. When ready to mix, pour the liquid from each into a 50 gallon cask and fill up with water. Wooden vessels are best, as these chemicals corrode ordinary metals.—Rural New Yorker.

A Gentleman

Who formerly resided in Connecticut, but who now resides in Honolulu, writes: "For 20 years past, my wife and I have used Ayer's Hair Vigor, and we attribute to it the dark hair which she and I now have, while hundreds of our acquaintances, ten or a dozen years younger than we, are either gray-headed, white, or bald. When asked how our hair has retained its color and fullness, we reply, 'By the use of Ayer's Hair Vigor—nothing else.'"

"In 1868, my affianced was nearly bald, and the hair kept falling out every day. I induced her to use Ayer's Hair Vigor, and very soon, it not only checked any further loss of hair, but produced an entirely new growth, which has remained luxuriant and glossy to this day. I can recommend this preparation to all in need of a genuine hair-restorer. It is all that it is claimed to be."—Antonio Alarum, Bastrop, Tex.

AYER'S HAIR VIGOR

MOLALLA GRANGE, No. 40, P. of H.
Meets at their hall, at Wright's Bridge on the second Saturday of each month at 10 a. m. Fellow members made welcome.
J. H. COOPER, Secy. J. K. NELSON, Master.

WARNER GRANGE, No. 117, P. of H.
Meets fourth Saturday of each month at their hall in New Era.
C. G. WILLIAMS, Master. M. G. WALDRON, Secy.

ACHILLES LODGE, No. 38, K. of P.
Meets every Friday night at the K. of P. hall. Visiting Knights invited.
CHAS. ALBRIGHT, Jr., C. C. J. E. RHODES, K. of H. and S.

COLUMBIA HOOK AND LADDER CO.
Meets first Friday of each month at Fountain Engine house.
CHAS. ATHEY, Pres. C. B. PINELO, Secy. CHAS. HITEK, F. W.

CATARACT HOSE CO. No. 2.
Meets second Tuesday of each month at Cataract Engine house.
W. H. HOWELL, Pres. G. H. BESTOW, Secy. J. W. O'DONNELL, F. W.

BUTTE CREEK GRANGE, No. 82, P. of H.
Meets at their hall in Mayhew, second Saturday in each month at 10 a. m. Visiting members always welcome.
J. E. JACK, Secretary J. R. WHITE, Master.

MRS. ELMIRA HATCH.
HEART DISEASE 20 YEARS.

Dr. Miles Medical Co., Elkhart, Ind.
Dear Sirs: For 20 years I was troubled with heart disease. Would frequently have falling spells and smothering at night. Had to sit up or get out of bed to breathe. Had pain in my left side and back most of the time; at last I became despondent. I was very nervous and nearly worn out. The least excitement would cause me to faint. I have no pain, smothering, dropsy, no wind on stomach or other disagreeable symptoms. I am able to do all my own household work without any trouble and consider myself cured.

It is now four years since I have taken any medicine. Am in better health than I have been in 40 years. I honestly believe that Dr. Miles' New Heart Cure saved my life and made me a well woman. I am now 64 years of age, and am able to do a good day's work.
May 28th, 1897. Mrs. ELMIRA HATCH.
SOLD ON A POSITIVE GUARANTEE.

TREAT SPEAR HEAD CONTEST.

SPEAR HEAD AND SAVE THE TAGS.

One Hundred and Seventy-Three Thousand Two Hundred and Fifty Dollars.

\$173,250.00

In valuable Presents to be Given Away in Return for

SPEAR HEAD TAGS.

- | | |
|--|---------------------|
| 1,155 STEM WINNING ELGIN GOLD WATCHES..... | \$54,250 00 |
| 5,775 FINE IMPORTED FRENCH OPERA GLASSES, MOROCCO BODY, BLACK ENAMEL TRIMMINGS, GUARANTEED ACHROMATIC..... | 25,875 00 |
| 23,100 IMPORTED GERMAN BUCKHORN HANDLE, FOUR BLADED POCKET KNIVES..... | 23,100 00 |
| 115,500 ROLLED GOLD WATCH CHARM ROTARY TELESCOPE TOOTH PICKS..... | 27,750 00 |
| 115,500 LARGE PICTURES (14x22 inches) IN ELEVEN COLORS, for framing, no advertising on them..... | 25,875 00 |
| 261,030 PRIZES, AMOUNTING TO..... | \$173,250 00 |

The above articles will be distributed, by counties, among parties who chew SPEAR HEAD Pipe Tobacco, and return to us the TIN TAGS taken therefrom.

We will distribute 225 of these prizes in this county as follows:

- | | |
|--|------------------|
| TO THE PARTY sending us the greatest number of SPEAR HEAD TAGS from this county we will give..... | 1 GOLD WATCH |
| TO THE FIVE PARTIES sending us the next greatest number of SPEAR HEAD TAGS, we will give to each, 1 OPERA GLASS..... | 5 OPERA GLASSES |
| TO THE TWENTY PARTIES sending us the next greatest number of SPEAR HEAD TAGS, we will give to each 1 POCKET KNIFE..... | 20 POCKET KNIVES |
| TO THE ONE HUNDRED PARTIES sending us the next greatest number of SPEAR HEAD TAGS, we will give to each 1 ROLLED GOLD WATCH CHARM ROTARY TELESCOPE TOOTH PICK..... | 100 TOOTH PICKS |
| TO THE ONE HUNDRED PARTIES sending us the next greatest number of SPEAR HEAD TAGS, we will give to each 1 LARGE PICTURE IN ELEVEN COLORS..... | 100 PICTURES |

Total Number of Prizes for this County, 225.

CAUTION.—No Tags will be received before January 1st, 1898, nor after February 1st, 1898. Each package containing tags must be marked plainly with Name of sender, Town or County, State, and Number of Tags in each package. All charges on packages must be prepaid.

READ.—SPEAR HEAD possesses more qualities of intrinsic value than any other pipe tobacco produced. It is the sweetest, the toughest, the richest. SPEAR HEAD is positively and distinctly different in flavor from any other pipe tobacco. It is a trial will convince the most skeptical of this fact. It is the largest seller of any similar smoke and style on earth, which proves that it has caught the popular taste and pleases the people. Try it, and participate in the contest for prizes. See that a TIN TAG is on every 1 cent piece of SPEAR HEAD you buy. Send in the tags, no matter how small the quantity. Very sincerely,
THE P. J. BORG COMPANY, Middletown, Ohio.

A list of the people obtaining these prizes in this county will be published in this paper immediately after February 1st, 1898.

DON'T SEND ANY TAGS BEFORE JANUARY 1, 1898.
