GLASS. According to Pliny, the discovery of glass-making was purely accidental. He tells us that two merchants were carrying a quantity of niter over a desolate tract of country, and at length paused upon the banks of a river to rest. Wishing to partake of some food they built a fire, and not finding any stones on which to place their kettles,

they put them on some pieces of niter. The heat from the fire melted the niter, which mixed with the sand and formed a transparent matter, which was glass. Feel languid, weak, run-down? Headache?
