PRESERVING EGGS.

Eggs may be preserved for several months by different methods. If put up right in the spring they may be kept till the following fall or winter. They will not be as good, however, as fresh-laid eggs. A method that will preserve the original quality of the eggs for an indefinite period has not yet been discovered. By cold storage, eggs are put up in large quantities during the spring season when prices are low, but where it is desired to preserve a small quantity for home use the cold storage method is not practicable.

Besides cold storage, there are two methods of keeping eggs that give good results. They are the lime method and the water glass method. If the work be properly done, either water glass or lime will keep the eggs in fairly good condition.

Eggs intended for storage should be fresh and clean. Washing the eggs rather injures their keeping quality and it should not be done unless the eggs are dirty. March or April eggs will keep better than May or June eggs. The sooner they are put into storage after being laid the better they will keep. If necessary to keep them for a few days before being preserved they should be kept in a cool, dry place.

The Lime Method.

Dissolve a pound of lime in five gallons of water. The water should be previously boiled to sterilize it, and then cooled. Stir thoroughly, and let settle. Then pour off the clear liquid into a wooden or earthen jar or tub. Fill with eggs to within an inch of top of liquid. This will allow for evaporation. The liquid should not be allowed to get lower than top of eggs. When the vessel is filled with eggs cover it with coarse muslin or factory, over which spread a paste of lime to exclude the air.

The Water Glass Method.

Water glass (sodium silicate) may be purchased at the drug stores. Use the liquid form and the commercial grade. In the following proportions: Water glass, one part, water eight parts. Use earthen jars or wooden tubs or barrels that are perfectly clean, and store in clean place.

Water glass should not cost more than 75 cents a gallon. The material used will cost about a cent per dozen of eggs stored.

Either of these methods closes up the pores of the eggs, and when boiled the shell will crack. Puncturing the shell with the point of a needle will prevent this.

Men and Responsibilities.

There are plenty of college bred and business college reared men in the commercial world today who are compelled to admit that they are absolute failures. They are ready enough to work. In many cases they do succeed in holding positions for a certain length of time at least. They perform certain duties for which they are paid certain sums of money weekly, but they have never been able to rise above a general level. It isn't because they are dishonest. It isn't because they are lazy. The one great trouble is that they have never learned to take an interest in their employer's business, and, as nobody knows this better than their employer himself, he has never regarded them as trustworthy. Though he may have assigned the easy tasks to them they have never had to bear any of the big responsibilities.—Graham Hood in the New York Globe.

JENNINGS LODGE.

During the past week we have noticed a number of improvements at our little village. Among them are the new rooming house which is going up rapidly on Mr. Tompson's property on the east side of the car line. Mr. A. F. Russell is assisting with the carpenter work. Mr. J. B. Evans has begun his three-room addition and new porches at his house and when completed will be one of the coziest cottages at this place. Mr. C. P. Morse is having the baseboard cut on his five acres adjoining the camp grounds, which adds to its appearance very much, and is certainly one of the finest locations for a suburban home, as it is a short distance from the car line and also near the Willamette which is so beautiful at this place. Mr. Hampton is making preparations for a new barn on his lot on the river front. Mr. Charles Slocum has been busy engaged in trimming trees. Mr. Boys had his grounds plowed during the past week. H. A number are having their gardens plowed and are planting their potatoes at this writing.

We are pleased to note that a new line of business has been added since our last items went to print. Mr. H. J. Rice has a desk in his store where he is prepared to repair clocks, watches, and other jewelry. As Mr. Rice has been in the jewelry business for some time, his work will prove very satisfactory.

Since there are so many home-seekers coming from the East to Oregon, this month, we feel as if we want this part of Clackamas County to have its share of them locate here, as our climate is very agreeable, our soil is well adapted to fruits, garden truck and small grains, and our people are whole-souled. A great many who have acreage for sale, have got busy

and have newly, neatly painted signs up on most every corner.

The past week we have received a petition for which we are in hopes all will sign, to have a postoffice at this place in the H. J. Rice store, as this is very centrally located. Nothing slow about us at Jennings Lodge.
