He was sent to Portland on a street car and conveyed to the Good Samaritan hospital by an ambulance from Holman's stables.

Silver Polish.

A simple and effective silver polish is made by moistening ordinary baking soda with benzine or gasoline. Apply briskly with a brush, then wash in a warm suds and dry throughout the process. The ordinary precaution should be observed with the use of gasoline.

Drying preparations simply developed.

dry catarrh; they dry up the secretions, which adhere to the membrane and decompose, causing a far more serious trouble than the ordinary form of catarrh. Avoid all drying inhalants, fumes, smokes and snuffs and use that which cleanses, soothes and heals. Ely's Cream Balm will master catarrh or cold in the head easily and pleasantly. All druggists sell the 50 cent size. Ely Brothers, 50 Warren Street, New York.

The Balm is used without pain, does not irritate or cause sneezing. It spreads itself upon an irritated and angry surface, relieving immediately the painful inflammation. Ely's Cream Balm contains cocaine, mercury or other harmful drugs.

BENEFIT BUSINESS MEN

Promoter Has Secured \$65,000 From Country Merchants and Farmers to Construct Electric Railway.

Promotion of the proposed electric railway from Oregon City to Beaver Creek, Molalla, Liberal, Molalla, Marquam and Silverton or Mount Angel, will be undertaken in earnest in this city next week by F. M. Swift, who is handling the preliminary work for what is known as the Clackamas Southern Railway Company. Mr. Swift secured the right of way deeds and the surveys that were originally obtained by the Oregon City, Beaver Creek and Molalla Railway, and he has been working steadily for about a year, and has obtained subscriptions amounting to more than \$65,000 from farmers and country merchants. Next week he plans to invade Oregon City. No subscriptions are payable by Oregon City people until eight miles of road have been actually built and then 50 per cent of the amount is due. The total amount is collectible when 15 miles of road have been constructed.

"This is a project," said Mr. Swift, "that should be of interest to all Clackamas County people residing in the western and southern portions. With the construction of this road all of the trade that now goes to Canby, Hubbard, Barlow, Aurora and other towns, will come to Oregon City and the business men of your city have everything to gain by coming to the front strong. There is nearly 8,000,000 feet of fine timber standing tributary to the proposed route, which is bordered by the richest agricultural lands in the state of Oregon. The fruit lands in the foot hills are exceptionally good. The road is capitalized at \$25,000 per mile, while other lines are paying dividends on from \$40,000 to \$70,000 per mile."

McCormick Machines

... Insure a Successful Harvest ...

McCORMICK mowers embody all the excellent features of McCormick construction and are made in various styles and sizes to meet all requirements. There is the New Big 4 with its wide cut for extensive fields, and the Little Vertical Lift for the large lawn or small fields where trees and shrubbery are to be found. For fields that are full of stones, the Vertical Lift mower is unsurpassed. The noiseless, smooth cutting McCormick mower is the machine to buy.

Numerous excellent features are found on McCormick hay rakes, among which are: heavy rake head, best quality spring steel teeth, substantial, interchangeable wheels, protected ratchets, and removable boxes in hubs. These rakes are equally suitable for raking hay from the swath, or bunching from the windrow. Made in either self-dump or hand-dump style. For durability and quality of service, McCormick hay rakes are unsurpassed.

A successful harvest consists of gathering all the grain, no matter what its condition, with the least possible delay and expense. McCormick binders cut all conditions of grain easily and rapidly, and bind it into neat, compact bundles for future handling. Under all reasonable conditions the McCormick will never necessitate any long delays for repairs, and thus jeopardize the entire crop. The machine is so simple in construction and easy to operate that it can be relied upon to do the work at all times.

The hay tedder is now recognized as being indispensable to the proper handling of hay. It is a great time saver, because, tattered hay will cure quicker than untended hay. It is also a hay saver in case of wet weather. McCormick tedders are constructed with the same care that characterizes all machines of this notable line, and have become general favorites wherever hay is grown. Steel frame, steel wheels, steel forks, and the positive and uniform gear drive, make McCormick tedders durable and extremely efficient.
