Edwin Hooker, an irrigator specialist of Eastern Washington, left for Portland Tuesday morning, after speaking of the project of irrigating the land near and at Canby, state that it will be a great benefit to the country. He says that Canby will make a wonderful pear and alfalfa country and that thousands of dollars can be made. If properly grown, alfalfa can easily be raised here, after the land is irrigated. The Southern Pacific Company some time ago furnished the seed for the growing of alfalfa as a test of the soil here, and as a result a fine crop is looked forward to this year. Last week, where this seed was sown, the alfalfa stood 18 inches in height, and since the last rain more growth has been attained. On the old Hampton place alfalfa was sown as an experiment, and this too, has proved successful. Mr. Hooker, in speaking of Canby country, says that it is the garden of gardens before leaving for Washington. Some of the finest asparagus that is sent to the Portland markets is raised in Canby. McCormick Machines
... Insure a Successful Harvest ...

McCORMICK mowers embody all the excellent features of McCormick construction and are made in various styles and sizes to meet all the possible conditions of field and farm. There is the New Big 4 with its wide cut for extensive fields, and the Little Vertical Lift for the large lawn or small fields where trees and shrubbery are to be found. For fields that are full of stumps and stones, the Vertical Lift mower is unsurpassed. The noiseless, smooth cutting McCormick mower is the machine to buy.

Numerous excellent features are found on McCormick hay rakes, among which are: heavy rake head, best quality spring steel teeth, substantial, interchangeable wheels, protected ratchets, and removable boxes in hubs. These rakes are equally suitable for raking hay from the swath, or bunching from the windrow. Made in either self-dump or hand-dump style. For durability and quality of service, McCormick hay rakes are unsurpassed.

A successful harvest consists of gathering all the grain, no matter what its condition, with the least possible delay and expense. McCormick binders cut all conditions of grain easily and rapidly, and bind it into neat, compact bundles for future handling. Under all reasonable conditions the McCormick will never necessitate any long delays for repairs, and thus jeopardize the entire crop. The machine is so simple in construction and easy to operate that it can be relied upon to do the work at all times.

The hay tedder is now recognized as being indispensable to the proper handling of hay. It is a great time saver, because tugged hay will cure quicker than untugged hay. It is also a hay saver in case of wet weather. McCormick tedders are constructed with the same care that characterizes all machines of this notable line, and have become general favorites wherever hay is grown. Steel frame, steel wheels, steel forks, and the positive and uniform gear drive, make McCormick tedders durable and extremely efficient.

Whooping Cough.

This is a more dangerous disease than is generally presumed. It will be a surprise to many to learn that more deaths result from it than scarlet fever. Pneumonia often results from it. Chamberlain's Cough Remedy has been used in many epidemics of whooping cough, and always with the best results. Delbert McKeig, of Harlan, Iowa, says of it: "My boy took whooping cough when he was ten months old. He had it in the winter. I got a bottle of Chamberlain's Cough Remedy which proved good.
