Home Course In Modern Agriculture

XI.—Bacteria - How They Affect the Farmer By C. V. GREGORY,

Agricultural Division. Iowa State College Copyright, 1909, by American Press Association

E hear a great deal a bacteria, or germa, as the are more popularly called but few people know who they really are. Although they are so small that it would take severathousand together to make a spot large enough to be seen with the the farmer is not measured by their

Bacteria are tiny plants, each com posed of a single cell. These cells singly and some in groups. Som-

cannot move at all, some move by twisting themselves about, and still others have long, tall-like fingella by which they more themselves along. Hacteria are made up of a clear, jellylike material called protoplasm. This protoplasm is surrounded by a

harder cell wall. There is a great difference in the thickness of these cell walls, and on this thickness de pends to a large extent the ability of the germs to withstand unfavorable conditions. Those with thin cell walls can be killed easily, while the thicker walled kinds are very difficult to ex-

Bacteria propagate themselves by One cell divides into two Each of these two grows to full size and divides again, and so on. Under favorable conditions this process may be repeated every half hour. At this rate the descendants of one germ would in ten hours number more than a million.

At times the part of the protoplasm of a germ will gather into a round. comparatively hard mass, called s spore. The rest of the cell then crum bles away. This spore is inactive, but possesses much greater powers of re sistance than when in the active state These spores often remain alive to start the infection afresh after the active bacteria have all been killed by disinfection.

Bacteria, like higher plants, have definite requirements for growth. One of the most important of these is mois ture. Drying will not kill bacteria, but it will stop their multiplication. Another essential to bacterial growth is warmth. Cold, like dryness, will not kill them, but it will stop them from multiplying. This is the reason that the souring of milk or the spoiling of meat, which is caused by bacteria, goes on much more slowly or not at all when they are kept in a cold place.

One of the principal foods of bacte ria is nitrogen. Without it they cannot live. Because of this fact sugar and lard, which contain no nitrogen, never spott. Bacteria also require oxygen, though only certain species are dependent on the air for their supply. One of these is the kind that causes meat and vegetables to decay. This is why canned fruit and vegetables do not spoil. The bacteria have been before the can is sealed up cannot develop for lack of air. If the can is not air tight, however, some oxygen will find its way in, the germs will multiply, and the contents will spoil.

Not all bacteria are injurious. Although some of man's most deadly enemies are found among these invisible micro-organisms, yet many of them are his best friends. We have already learned about the bacteria that live on the roots of legumes and change the nitrogen of the air into a form in

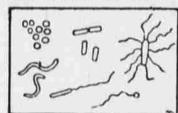

FIG. XXI-SOME TYPES OF BACTERIA. which it can be used by plants. The rotting of manure and trash to make

humus and of humus to make the elements of plant food available is also due to the action of bacteria. In this way bacteria, by making animal wastes available for plant food, complete the circle of plant and animal

The putrefying bacteria, or those which cause rotting, are more beneficial than harmful. By their action dead animals and other refuse matter are quickly reduced to the elements from which they were made. Even the odor given off during the process is also beneficial as a reminder that the matter of burying or bitraing has been neglected.

Other micro-organisms in the form of yeast are a necessary help in breadthe dough, set free considerable amounts of carbon dioxide. This gas in trying to escape fills the dough with holes and spaces, making it "rise."

The bacteria which cause milk and cream to sour are also useful. Butter made from sweet cream is lacking in flavor, and there is not so much of it. since the globules of butter fat do not collect as readily as in sour cream. But, while the germs that cause milk to sour are harmless, there are others

A Scalded Boy's Shrieks horrified his grandmother, Mrs. Maria Taylor, of Nebo, Ky., who writes that, Canby Canal Company and S. M. when all thought he would die, Buckwhen all thought he would die, Bucklen's Arnica Salve wholly cured him. Infallible for Burns, Scalds, Cuts,

of burning slab wood,

often found in milk that are not. The first variety will always be plentiful enough anyway, and the others should be kept down to as small a number as

One of the most important methods of doing this is by cleanliness. The naked eye, yet their importance to milk palls and strainers and the separator should be thoroughly cleaned every time they are used. Mere rinsing with cold water is not enough. Following the ordinary washing by are of various shapes and sizes. Some scalding with boiling water is the only are round, some long and some shaped sure way of killing all the germs. In like a corkscrew. Some are found cleaning dishes a brush is much better than a rag, since it can be more easily cleaned itself. A dish rag remains damp for a long time after it has been used and furnishes an excellent place for bacteria to grow. The "dish rag flavor" caused by these can often be detected in butter.

After the dishes have been scalded they should be placed in the sun for several hours. There should be as

FIG. XXII-HOW SPORES ARE PORMED. much sunshine as possible in the milk room and cow stable also. Sunlight, which is so necessary to the growth of

the higher plants, is fatal to bacteria. The stable where the milking is done should be cleaned and aired every day. A coat of whitewash should be applied occasionally, as in also makes the stable much lighter. Mesdames Andrew Heckler, I. Hay should not be fed immediately covered with bacteria. The udders Kamsier. The following programme and flanks of the cows should be kept was well rendered: Opening address, perfectly clean. A little dirt failing from them into the milk will take Woodfin; recitation, Miss Erna Petperfectly clean. A little dirt falling with it thousands of germs. The milk zold; quartet, Mensrs, Dambach, Ackshould not be left in the barn after it or, Potzold and Michels, Miss Klemdrawn, but taken immediately to sen, the milk room.

Many creameries and city milk deal-ers practice pasteurization. This sim-Herdie," Verein. ply consists in heating the milk to as high a temperature as possible without scalding it. This kills most of the center of the hall, and eight young germs, and the few that are left will ladies, Misses Clara Winkle, Rosa not develop rapidly enough to do Muench, Helen Yonker, Clara Endres, that is, a portion of milk which con Annie Werner, took positions around tains a particular kind of bacteria—is the pole, holding streamers, and sung. added after pasteurization and the the German May song, and then per-cream then "ripened" for twelve hours formed the Maypole dance. They or so. By thus supplying germs which then performed a flower drill, each at-

are unable to obtain a feethold in a not spoil. The bacteria have been digestive organs are fatal to many of a dinner of German dishes. An invitation from the Arion society to attend their picnic in a body at out of danger. The blood contains large numbers of white corpuscies, which seem to have no duty to perform but to seize and destroy these invaders. It is only when an animal becomes weakened from one cause or another that these corpuscles fail to do their duty and the germs begin their

destructive work. The first step in avoiding infection by disease producing bacteria, then, is to keep the animals healthy by proper feed, exercise and shelter. The next point is to do everything possible to prevent the germs from getting into the animal's body.

In case a contagious disease of any

pecial care to prevent infection. Or ria. Had Mr. Hackett asked the dinary disinfectants are too irritating, yet something must be done to keep found out why the warrants were left field. CITY SCHOOLS CLOSE ON FRIDAY, JUNE 11

TEACHERS FOR COMING YEAR WILL BE ELECTED NEXT MONTH.

The board of directors of the city schools has decided to close the schools Friday, June 11. This is one week later than the time originally set, and the extension is due to the fact that a week's holiday was de-clared in January during the extreme old weather,

Teachers for the coming school ear will be elected Monday evening. fune 14. The regiznation of Miss in the Eastham building, has been ac cepted and Miss Eva Meldrum was lected to fill the vacancy.

There will be one more holiday be ore the close of school. This will fall on Monday, May 21, as this is Decoration Day. The board denied the request of the high school pupils to set aside one Priday in the month of May for an excursion to Hood River. It is probable that this trip will be made on some Saturday, if at all.

This Friday afternoon in all of the ooms of the public schools there will exercises commemorative to the life of Dr. John McLoughlin, the father of Oregon. In every room there will given an opportunity for the pupils to contribute toward the fund that is being raised to preserve the McLough-

There will be no Commencement exercises for the 1909 graduating class this year. The eleventh and twelfth grades were only added during the present year and there is only one graduate for the twelfth grade.

GERMANS MEET SUNDAY.

Members of Deutsche Verein Enjoy Day and Evening.

The Deutsche Verein met at Knapp' tall Sunday afternoon, for the first time in the past two months, and the meeting was well attended, there being a delegation from Portland presaddition to being a good germ killer it ent, among whom were Messrs, and Schneider, Florian Fuchs, A. Kleeman before milking, as the dust from it is Henry Breibordt, A. Lehman and Aug. President Gustave Schnorr; response, accompanist; recitation, Miss

CASTORIA For Infants and Children. The Kind You Have Always Bought

LOOKING ACROSS GEYSER BASIN AT HORTICULTURAL HALL

No fairer scene can be offered any place than the outlook from the foot of the Alaska Monument on the grounds of the Alaska-Yukon-Pacific Exposition. Standing directly in front of the great building of the United States Government, the enormous golden eagle on his towering perch of northern gold keeps watch and guard over the most perfect exposition city that has ever been reared. Under his eye are gathered the rarest collection of man's examples of skill and art ever assembled, and these find shelter in a magnificent group of permanent and temporary buildings, whose architectural design and clever construction exemplify the very

highest of man's inventive ability. At night when the long twilight of the northern latitudes close down, the manifold beauties of the spot show their greatest charm. With the fading of day comes the romance of evening and the millions of lamps, made brilliant by electricity, flash their rainbow tints over a land such as fairles might have builded. The rushing, tumbling torrents of the Cascades pour their enormous volume over a bed covered by electric bulbs, and from the quiet pool of Geyser Basin are reflected as in a mirror. Electroliers of French design are lavishly scattered beneath the trees, and from their clear rays the fields of flowers are seen in added hues.

OUR FARMERS' PAGE.

ENTERPRISE READERS ARE INVITED TO CONTRIBUTE AGRICULTURAL, HORTICULTURAL, LIVESTOCK, POULTRY, DAIRY OR "BIG CROP" ITEMS FOR THIS DEPARTMENT.

Song of Spring. The happy birds are singing On every branch and tree, And budding, sweet wild roses Tempt every honey-bee. Young leaves of green, so tender, On every twig and bough, Are rocked by every zephyr That haunts the woodland now.

n far-off fields and meadows Spring tiny shoots of grain, And soft the sunshine glimmers Through long, long threads of rain The noisy brooks are flowing in music, glad and free, And sweet the balmy south wind Is traveling o'er the sea,

The happy earth begulles us With smile, and then with tear; We join in all this gladness, Spring, happy spring, is here.
