A prominent physician is responsive for this assertion: "Any young woman stenographer, quick and alert, can earn extra money if she will learn medical terms and apply for the position of stenographer at the various medical meetings held every week in large cities. It calls for a good education, some knowledge of Latin, and it will be necessary for the applicant to learn medical terms, and learn them quickly; also to acquaint herself with physiology if deficient in that study. There is a great demand for help of this kind, and because most of the meetings are held at night very few apply for a steady position, but it opens a lucrative one to the ambitious. A line of this work would soon lead up to a very responsible position in a chemical house, where wages are usually the very best, because competent help is not always obtainable for that office."
