MYSTERY OF THE EEL. Just How its Existence Ends, or Why No One Seems to Know. Of all the forms of fish science has studied the eel is the most remarkable and the least understood. Its life history is mysterious and as slippery as its own skin. Its breeding grounds are the mid-Atlantic, at what depth nobody knows. During the year the larval eel remains at sea it never eats and grows constantly smaller. It finally starts swimming toward the mouth of some fresh water stream—often one that is a thousand miles away. On arrival at its destination the eel promptly changes from the thinness of a visiting card and a transparency that permits only its glistening black eyes to be seen to the pigmented snake-like fish that is trapped and speared on the coast and in the rivers. As soon as the eel has brought forth its first spawning of 15,000,000 to 20,000,000 eggs it dies, but just how its existence ends or why it should be cut off so short remains a mystery. One thing is certain, no adults remain in the streams. The eel is a vertebrate animal which emerges from an egg less than one-twentieth of an inch in diameter. It grows to a length of three inches in perhaps a year, and during that time is buffeted about on the high seas and drifts over a distance of 1,000 miles or more. Yet during all this period the eel takes no food whatever and is doubtless incapable of doing so, owing to the unprepared condition of its digestive organs.—New York American. CURIOUS MULTIPLICATION. You Need Not Know the Table Beyond "Two Times Nine." What! Multiply 343 by 177 without knowing the multiplication table beyond the "two times nine"? Yes, if you can multiply and divide by 2 you can get any product in the following simple way: Put down the two numbers side by side and form a column under each by successively dividing by 2 in the first column and doubling the number in

store. Fill it with nitrate of ammonia salts, fill up with water, cork tightly. Shake till the salt is dissolved. Be careful to wipe the outside of the tube dry in order that all traces of the nitrate may be removed. Place this tube into a glass of water and agitate as you would a spoon. The Blizzard Silo Filler Is the Thing There is no question about the value of silage for feed and the Blizzard Ensilage is a good investment for the farmers of the Northwest for still another reason. It enables them to put away the crop when it should be put away, regardless of weather condition. Many crops could have been saved in the past few years if farms on which the loss occurred had been equipped with a silo and Blizzard Silo Filler. The Blizzard is a Time Tried Machine. Don't make the mistake of buying a silo filler of questionable merit. They cost nearly as much in the beginning and far more in the long run, or short run, either, for that matter. The Blizzard is a practical machine. It combines knives, fan and fly wheel instead of using these as separate units, thereby saving power and making a more compact cutter. It elevates without fall into the tallest silo. Its cuts the material with a sheer cut, does not crush it. The Blizzard is responsive to control and safe to operate. The Blizzard is widely imitated, but nothing can shake its popularity with those who have used them. FINDS IT VERY SATISFACTORY Cleone, Oregon, May 2, 1913. Mitchell, Lewis & Staver Co., Portland, Oregon. Gentlemen: We have used your Blizzard ensilage cutter the past season and find them a very satisfactory machine in every way. We put up over 600 tons of corn and had no trouble cutting from 50 to 65 tons per day and elevating it to a height of 32 feet, using an L-15 machine. We consider them the best machine made for the purpose. We also used it to cut alfalfa and clover hay fed to sheep and cattle at our yards this winter, and it handled the work in good shape. Yours truly, The SUN DIAL RANCH, By E. G. McGaw.

SUNBURNT EGGS ARE A LOSS TO FARMER Sunburnt eggs are the bane of the egg trader in this part of the state at this time, and much dissatisfaction is existing as a result of unusual heavy shipments of this character to the market. Seemingly the country shipper has not yet learned the costly lesson that especially during the summer months it does not pay to hold supplies from the market in the hope of obtaining better values. According to leaders of the egg trade there are greater losses today after candling eggs than for many years; in fact some say that they have never before seen such heavy losses. Naturally this loss falls directly upon the producer, but the consumer is likewise hurt because he is forced to pay more for the better quality eggs than would be the case if shipments were made regularly instead of spasmodically as at present. THE WEARY WAY. Daily Becoming Less Wearisome to Many in Oregon City With a back that aches all day. With rest disturbed at night. Annoying urinary disorders. "Tis a weary way, indeed. Doan's Kidney Pills are especially for kidney trouble. Are endorsed by Oregon City citizens. James Wilkinson, 201 Fourteenth St., Oregon City, Oregon, says: "I had to get up often at night on account of kidney weakness and I suffered from pains and aches in my back. My limbs were quite stiff. I was finally told to try Doan's Kidney Pills. I tried several boxes and they made me strong and well. All I said about Doan's Kidney Pills, when I publicly recommended them a few years ago, still holds good." Price 50c. at all dealers. Don't simply ask for a kidney remedy—get Doan's Kidney Pills—the same that Mr. Wilkinson had. Foster-McMillan Co., Props., Buffalo, N. Y. (Adv.)
