 FARM REMINDERS
 O. A. C. Experiment Station

The field vetch aphid is beginning to show up in serious numbers in some fields in the Willamette valley. No satisfactory method has been developed for the control of the pest, but specialists are at work on the problem at the present time. Growers bothered with this aphid should notify the experiment station so that we may keep them informed of any possible methods developed for control.

Newly seeded lawns should be rolled just before or just after the first clipping.

Diversification in farming is an important factor in the net returns of a farm. Analysis of 150 dairy farms in the dairy section around Portland shows that they did not make their expenses in the last year. The same is true of the alfalfa section in the irrigated district in Malheur county. This indicates that greater diversity the greater will the net returns be probably for in the case of the dairy farm the farmers raised feed and fed it to the stock, while in the case of the alfalfa farms they only raised the hay and as a consequence they lost most heavily.

The foliage mite can be controlled by lime-sulfur sprays as applied in early season for other troubles. Also by sulfur dust. It is reasonable to assume that sulfur in any form that is safe for the tree will check this mite, which often causes the leaf to be undersized and contracted. On pears the leaves turn brown and leathery. The foliage later tends to turn black and drop.

NO TIME!
 "Cousin Henry," gasped the country visitor from Woodpecker Flats, "you just missed that man!"
 "Can't help it," bellowed his city relative, throwing her open another notch. "Haven't got time to go back and try it again."

New Road Will Aid Sandy Development

SANDY, May 4.—Yesterday a big event happened in Sandy-ridge section when the new Dwyer Logging rail road was opened for the first time for freight traffic to Portland. The first freight hauled over this long haul for branch of the P. R. L. & P. Co. was two car lots of potatoes billed to Burnett and son commission merchants. This railroad along Deep Creek has been the dream of farmers in that section for many years and with the marketing of the timber out to the Three Six country and with an easy outlet for products an era of development will dawn. The muddy roads did not bother Sandy-ridge folks much to haul their potatoes to Deep Creek, both hills and distance being eliminated by this new R. R. convenience.
