LOCAL PARTY MAKES TRIP OF NINETY MILES THROUGH YUMA DESERT

Thirty-six Hour Run Over Hot Sand Without Rest Made to Los Angeles.

By Willard P. Hawley, Jr.

LOS ANGELES, Cal., July 10. Knowing you will be interested in our trip across the desert, I will relate our thrilling experience. Everything went well until our departure from Yuma, Arizona, having made several trips previously over the desert, I knew how to prepare. We carried City. three days' supply of food for the party, six gallons of drinking water, in canteens and for the Packard we carrie dten gallons of water, five gallons of gasoline and one gallon of lubricating oil extra, in addition to leaving Luma with full tanks.

Leaving Yuma for Pheonix we tool the road leading by the Castle-Dome mine, which road it is claimed is ninety miles of desert without water The Automobile club posted warnings at the entrance of these vast stretches of desert wilderness warning motor ists to carry ample supplies. We saw a half breed Indian and only one white man across this desert, as the heat was so intense, being 118 in the shade, and it was necessary to draw often on our ten gallons of water to keep the machine cool enough to run as the car ran continuously at the boiling point.

Sand Is Deep. Except to stop and eat, we drove continuously without sleep or rest for about 36 hours. The saud was so. deep that we were stuck many times. Twice we were pulled out with mules and once we were dug out, . The stubbed brush is ruinous to tires and would put a hole right through the tire. We vulcanized six patches on our tubes in less than 24 hours. The light was so intense it was necessary for everyone to wear dark glasses. I feel our successful crossing of this vast Sahara was due first to the staunchness of our car, which came through the entire trip without raising the hood or touching a nut, screw or bolt and second to the driving of George E. Pusey, Jr., who was almost prostrated twice by the heat. At one time Mr. Pusey's tongue grew so swol len from the terrific heat that he could scarcely keep it in his mouth Heat Is Intense.

He quickly grabbed the water canteen and took a few swallows of water could hardly walk, and was reeling Chevrolet dealers. like a drunken sailor. Another time it was necessary to relieve George has been in existence for the past six from the strain he was undergoing years. During that period more than while driving inch by inch through half a million "Four-Nineties" of both this hell hole, as everything on the open and closed types have been sold. dash board was moving before his from this terrible ordeal and is rest. Mr. Hall, "is an insurance of quality ing in Los Angeles and we are sure to the purchaser. Moonshiners Jailed; One Gets Big Fine Moonshiner Gets

Sheriff Wilson's war on Clackamas county bootleggers and moonshiners has brought five more men to face to face with the law.

Anton Roope ,arrested Wednesday afternoon in a raid of his premises at Clackamas Heights was given 30 days or \$200 fine by Justice Noble late Wednesday evening. Roope started to serve the sentence. On his place the officers found 50 gallons of mash and a small quantity of the finished product.

George Brown, August Olsen, Dave Hoffmeister and Fred Molt were ar rested on various specific charges generally accusing them of making moonshine. Hoffmeisters place at Eagle Creek was raided last week and part of a still found but he was not arrested at the time.

Brown, also of Clackamas Heights, was found to have fig mash in process of distillation: Similar charges will be placed against Olsen, of Oregon City and Molt of Oatfield.

Portland To Retaliate

Because Oregon City has enacted an ordinance providing for a monthly license of \$10 on trucks that bring merchandise here for the purpose of re-sale, some of the manufacturers and merchants of Portland are threatening reprisals, the nature of which has not been indicated. Information has reached this city that a meeting is to be held at Portland next Wednesday night, when ways and means will be considered.

Several conferences have been held here at the instance of the Portland Chamber of Commerce and the delegations from Portland have failed to convince members of the city council or of the Commercial club that the regulation is unfair. Local students of the situation believe that \$10 a month is a reasonable sum to exact from operatives of trucks that use our streets for the purpose of selling products to our business men, and thus avoid rentals, taxes and other expenses that they are compelled to pay in more remote cities where they maintain supply depots. As a matter of fact the license is a mere trifle as compased with the amount of merchandise sold and is an overhead charge that inflicts no real burden upon the manufacturers and jobbers affected.

One member of a Portland delegation stated recently that the price of merchandise carried by the trucks would be increased by a sum in excess of the license fee, but this threat frightened nobody, for competition would probably prove an effective bar to such a method. It has been suggested that Portland "devise some way to retaliate against citizens of Clackamas county who bring their wares to the Portland market," but it is apparant that whatever plan is concocted will have to be applied to everyone and that discrimination against "citizens of Clackamas county" will be lacking in legality. This question confronted the city council when the ordinance was framed and it was necessary to apply it to local trucks offered merchandise for the purpose of re-sale, as well as to outside vehicles.

Some of the Portland dealers are taking a mighty small attitude over this matter. If the business sought after in Oregon City is not worth \$10 a month, then the trucks of Portland had better be withdrawn. The charge per truck, as compared with the volume of business, does not amount to a row of pins.

BATTLESHIP OREGON TO BE SENT HERE IF FUNDS ARE AVAILABLE

Sentiment in Washington to Station Old Ship in West Favorable

The proposition to station the Batleship Oregon in the Willamette river near Portland, is receiving favorable consideration in Washington, according to word received by City Record- able er Charles Keley, from Oregon senaors and representatives.

The Oregon City council recently passed a resolution, seconding Portstationed there. Mr. Kelley Saturday building. received a letter from Senator Robert Stanfield to the effect that the navy department was willing to make the park. change, but that at present no funds are available to provide for the upkeep of any vessel stationed outside of a navy base. The limited personal, ner. according to Senator Stanfield, would make it difficult to provide for the ship outside of an organized base.

Secretary of the Navy Denby, when interviewed upon the subject, stated that it was under consideration by the department and suggested that figures on the amount the city and state would contribute toward the upkeep of the vesset be ascertained, together with the accomodations for her wharfage, and submitted by the governor of the state to the department in a formal request.

Congressmen W. C. Hawley and C. N. McArthur have written here stating that they favored the assignment of the Oregon to the Willamette river and that they were bending their efforts toward securing of an official order to that effect.

MAN WHO TRANSLATES LANGUAGE OF SCIENCE **VISITS IN OREGON CITY**

C. J.McIntosh Puts Results of Deep Research Into Popular Terms.

Grey-bearded profesors of past dec ades have worked in their musty dens to translate the codified notes of the experiments of Rodger Bacon; students have labored for weary years to interpret the meaning of strange idiographs; but to C. J. McIntosh goes the distinction of being an interpre ter of one of the most unique tongues of the present day—the language of the scientist

Mr. McIntosh is the agricultural editer of the Oregon Agricultural college. A deviation from his beaten ine of travel brought him to Oregon City Wednesday.

Mr. McIntosh's work is to put the

results of scientific experiments into "human tongue." The results of learned investigation he robs of the mystery of technical terms and of lengthy formula. And the result is a simple, plain discription of a great truth, newly discovered or newly applied, written so that all who run may

Popular Terms Used

For a number of years Mr. McIntosh has been engaged in this work s unable to understand the technical plant or animal disease. But Mr. Mctists and converts it into the popular terms in which they are found in the bulletins and scientific literature published by the college.

For this work Mr. McIntosh requires an astounding technical knowledge of every subject from horticulture to geclogy. Words starting with "x" and continuing for five and six syllables have no terrors for him, and with ease he translates them into terms of every-day usage. And indeed, for this work Mr. McIntosh has to be a veritable jack of all trades. He isind his middle name is Jack He is christened that way. And since, he as earned the title.

Plant Nutriment Studied. Mr. McIntosh is particularly intersted at present in the experiments of the college scientists in plant nutriment. It was recently found that the nutrition of plants was every bit as important as feeding stock or fowls. Along this line the investigations were conducted further by the college than ever before.

They discovered, according to Mr. McIntosh, that the ratio of carbohydrates and proteins in the growth of the plant was more important than was generally believed. The ratio of these two substances must necessarily differ, according to the season of the year. By proper control trees are made longer. Cultivation, he says, tends to dsturb the natural condtions, and by riod of bearing are possible.

Farming Has Future. Mr. McIntosh has just returned from Newport where he watched with interest the work on the farms and on the new harbor. "They are building a wonderful harbor," he said, "but have maither tonnage nor bottoms. The only salvation for tonnage is in their agriculture. It is a wonderful country for seed potatoes-and if this crop is developed and certified, that county can supply the seed for the greater part of the California acre-

Possibilities of this sort exist the country over, he says. The development of agricultural resources of the nation must take on wider scope, ar must become more scientific, insur-

ing greater and surer production. Mr. McIntosh has just been visiting the country weekies throughout the state in the interest of a large and better country news servce, which he holds is the best circulation and advertising builder. This has been proven through a survey and contest just close dthroughout the state.
