## TEMPORARY SPAN TO BE FINISHED ON SCHEDULE

### Towers for 5th Street Bridge to be Completed by End of Present Week.

The erecting of the towers for the temporary bridge across the Willamette river, which is to carry traffic while the new span is under construction, will be completed by the end of this week, if no unforeseen delays occur.

The work of sinking concrete I beams for deadmen to hold the ends of the bridge cables is rapidly nearing completion. Timbers for the light span towers are sawed, and as soon as they can be bolted together and the towers completed, the stringing of cable will follow.

Under present plans, the light bridge, according to foreman Harry Clow, should be completed within not more than a month. As soon as the cables are swung, a double crew of men will be put to work placing the hangers and the beams and flooring.

The old bridge at 7th street which is to be replaced by the new structure, will be closed to automobile traffic January 2, but is to remain open to foot passengers until the temporary structure is completed.

## Battery Dopes Are Bunk, Says Willard

There are so many wonderful things being done every day that when a man says he has a solution of very, very secret nature, with some peculiar metal in it, which put new life into a battery, nine out of ten people are ready to believe him without question.

The whole scheme of battery doping seems so plausible that dozens of companies have been led to start in business manufacturing "dopes" of various sorts.

Some of these battery medicines are really harmless, and the worst that can be said about them is that they do no good—except that they relieve the car owner of five or six dollars which he might invest in gas, tires, oil, or something else more needful to the car. There are others that do actual harm by taking active material away from the battery plates and by introducing foreign substances into the battery solution.

As a result of a recent checkup on the subject of battery dopes, the Willard Storage Battery Company found that all makers of standard well known batteries are agreed upon the fact that the only satisfactory battery solution is diluted pure sulphuric acid of the proper density. Emphasis should be placed on the word "pure" for any foreign substances are liable to cause trouble in the battery. There is nothing, say these manufacturers, that will improve upon the pure solution that is put into the battery by its manufacturer and their authorized service stations.

The sum and substance of the battery builders' advice is that the way to keep a battery in condition is to put water in at regular intervals and keep it charged when necessary, and to remember that "Dope"—whatever there may be in it—can never take the place of proper attention.

H. D. Olson in Oregon City—  
H. D. Olson, former resident of Oregon City, who was local agent for the Southern Pacific Railroad company for two years, now traveling freight agent for the company, with headquarters in Portland, was in this city on business Wednesday. While here Mr. Olson visited among his many friends.

Among the Oregon City visitors Wednesday was Mrs. Lottie Fischer. Mrs. Fischer resides at Redland, and she came here on business.

Carus Resident in City—  
Mrs. Otto Schmeiser, of Carus, was among the Oregon City visitors Wednesday.

Sidney J. Williams, Secretary of the National Safety Council, stated recently that the economic loss caused by industrial accidents amounted to one billion dollars annually.

## Bridge Problems

Whether or not there is to be a bridge squabble remains to be seen, but indications on the surface point to developments which may mean the stoppage of construction, and an alteration of the plans under which the big structure across the Willamette is being built.

Much interest awaits the report of the committee appointed by the Live Wires Tuesday. There have been so many things intimated, that the general opinion is that something is wrong. Whether investigation will reveal this or not is unknown. Nevertheless, based upon the statements of members at the Live Wire meeting, it is reasonable to suppose that the present plans for the construction of the bridge will hinder and perhaps endanger navigation.

Steamboat men who have been wont to hug the west bank of the stream will have to find a new channel, as the arch of the bridge is so designed that top-masts and head-works will be broken if the old route is followed. And they claim that the center of the river is dangerous; that the current, coupled with the back-eddies make it impossible to control the type of boats which ply this stream, as they are decidedly flat-bottomed, requiring but slight draft.

The alternative to fixing the bridge as they say it should be fixed, with the west pier resting on the bank of the river, is to tie up river traffic during certain periods of the winter. This means hardship on local industry.

On the other hand, provided it was proved that the pier should be moved, the state engineers in charge of construction point out that an enormous expense will be involved, that the job will be delayed, the thousands of dollars already expended for foundation and steel fabrication will be lost, and that the utility and beauty of the bridge will be impaired.

The result of the investigation will be awaited with interest.

Mrs. Sinclair enjoys the Enterprise greatly and through it's Sandy news feels she keeps "quite posted" about happening news. Mr. Sinclair is trucking and running a tractor for government work.
