It's Time to Spray

The time for spraying dormant trees for San Jose Scale, other Scales, and for other insect pests is right now before the buds begin to swell.

Generally speaking, only those insects are destroyed which actually come in contact with the spray, so thoroughness is essential.

By spraying now there is no foliage to hinder and the application may be more thorough. Also the spray may be used much stronger than during the growing season. And also danger to growing buds and twigs is eliminated.

Lime-Sulphur

is the accepted dormant Spray and one thorough dormant treatment each year will keep under control the more important scale insect pests of the orchard. Lime-Sulphur may be had either dry or in liquid form but the dry form is more convenient and less expensive to handle and is now generally used.

Sherwin-Williams Dry Lime-Sulphur

Table with 2 columns: Quantity (1-lb., 5-lb., 10-lbs., 25-lbs., 50-lbs., 100-lbs.) and Price (30, 1.25, 2.00, 3.90, 7.35, 13.00).

10 to 14 pounds of Dry Lime-Sulphur make 50 gallons of strong Dormant Spray.

For Peach Leaf Curl

On or before February 10th the authorities say you must spray with Bordeaux mixture for Peach Leaf Curl. We now have Bordeaux Mixture in dry form, prepared by Sherwin-Williams. You will find it equally dependable, more economical, and more convenient than the old Bluestone mixture.

If you are not fully posted on spraying come in and have a talk with Mr. James, our spray expert.
