The Oak Grove Power plant, on the Clackamas river, which is being constructed by the Portland, Railway, Light and Power company, will ultimately be one of the largest plants of its kind in the west. A large force of workmen is now employed building a road twenty-five miles in length from the terminus of the company's electric railway at Cazadero. Additional pipe lines will provide for further units of water wheels and electric generators. During this year an additional 5200 horsepower generator will be installed at the company's Bull Run plant and a 3000 horsepower steam auxiliary will be placed at the Salem plant as a means of providing additional power to meet increasing demands in Portland and through the Willamette valley. Construction expenditures this year will exceed \$2,000,000 and next year even more will be needed to meet the improvement program. The first unit of the Oak Grove project is to be of 33000 horsepower and is to require two years for completion. The final construction will be on a plant which will develop 100,000 horsepower.
