Today's drawing is a new and pretty model for an afternoon gown of striped silk. The stripes are made more prominent and consequently more effective by being cut to run in opposite directions on different parts of the gown. On the bodice itself, lower part of the skirt and deep cuff the stripes are made to run horizontally, the upper part of the skirt is draped into a shaped band of plain silk, the same shade as the striped material—a delicate heliotrope. A breadth of the striped silk which swaths the lower part of the bodice and plain silk, and which crosses the left shoulder, introduces still another line for the stripe.

A MONEY MILL FOR THE FARMER

Wherever one travels, dairy sections give the most visible manifestations of thrift and prosperity. The monthly cream check puts more money in circulation. The purchase of concentrated feed adds to the productivity of the farm. Large crops, big barns, comfortable houses, good roads, schools and other conditions indicate that the farmers are "making good." The best steer cannot hold its own with the dairy cow, says the editor of Farm and Home, because she can get more dollars for her owner out of a ton of hay or an acre of corn. She is a more profitable transformer of farm crops into money. The food that will make several dollars' worth of beef will make several dollars' worth of milk or butter. The dairy industry has undergone several revolutions in the last 30 years. First, the shotgun creamer and deep setting supplanted the shallow pan and surface skimming. Small creameries took the place of home dairies, when came the centrifugal separator and the factory system. Centralization has brought many economies and handsome profits. The hand separator has been a very important factor in his development; without it the dairy industry would be far behind.
