\$985

This Car is equipped with 5 Enameled Electric Lights

An Astonishing Price--An Astonishing Car

Buy the Car Value that Beats It--if you can find one.

The first thing will strike most people in reading of the R-C-H will be the price. And this is natural. For a completely equipped car of this type has never been offered at anything approaching this figure. Judged on price alone—the R-C-H Touring Car, Roadster or Coupe stands in a class of its own. But it's not on price—it's on what you get for the price, that we want you to judge the car.

What Makes the R-C-H Possible

Briefly, the most thorough systematization of factory and cost problems that the automobile industry has ever seen. Little leaks, small wastes, lack of cooperation between different departments—these have been features of motor-car manufacture. Such leakage, wastage and lack of system lost only a few dollars here and there, but they made in the aggregate a wonderful difference in the price you paid for your car.

We made up our minds that with manufacturing, factory and purchasing problems simplified, a high-grade car could be produced at a price that would be revolutionary in the industry. And the R-C-H turned out in the R-C-H plants, has proved our contention.

We know this is one of the most practical cars sold in Clackamas County and it is especially adapted to the hard wear a car will undergo on our hills.

We have this car in stock and will give a demonstration at any time.

Our garage is equipped to handle all kinds of repair work on short notice. All R-C-H parts are always kept on hand, meaning extra quick service.

Go through the R-C-H plants from end to end and you'll see all the mechanism of the vast business working with absolute precision for perfection, but you won't find a dollar wasted money, or an hour of wasted effort.

How the R-C-H is Made

We could not build better for a car at any price. Chrome nickel steel is used throughout all shafts and gears in the transmission and rear axle, and high carbon manganese steel in all parts requiring special stiffness. 244 drop forgings are used—a larger number than in any other car in the world—irrespective of price.

The R-C-H crank-shaft is as large as that in many 40-horse power cars. The radiator has one-third more cooling space than in any other cars of this type.

The long-stroke motor (3 1-4 5) develops exceptional power and speed. The springs—full elliptic rear and semi-elliptic front—insure easy riding.

You owe it to yourself to investigate the R-C-H thoroughly, and if we can get you to do that we're satisfied. For if the R-C-H will not sell itself to you on your own investigation and judgment we don't want you to buy it. Compare it, detail for detail, with any car you have in mind at \$1500—or even higher.
