Cameo Carving.

Cameo carving is by no means a city as a fascinating recreation. It is ages. rather an expensive fad, and it is interesting to watch one of these skilled amateur craftsmen at his bench exe cuting a difficult model. All the tools used by the carver are but a handful. The worker sits before a wheel turned by a pedai and the little, pointed instruments, resembling those used by dentists, are placed in the corner of the small table on which the worker's hand rests while he holds the shaped stone or shell beneath the needle-like drills. The drills vary in thickness according to the portion of the design to be executed. On account of the high nervous tension the amateur cary er works but a short time each day-New York Sun.

The drys estimate that the city

After a careful canvass of the regis terday afternoon at her home in West tration lists and the placing of all doubtful votes in the columns of the wets, the prohibition forces believe they still have enough of a mojority to control the election and to place

the city in the dry column. They also estimate that there will be 1600 votes, at least, cast at the forthcoming election on the question and that a large per centage of these will be women. Duplications have been found in the registration lists and men have registered this year whose names were on the books at the last general election. In order to be sure of the ballot at this time, they have again registered and have duplicated the lists.

Allowing for this and all chances of challenging, the drys contend that they are yet in the majority and that they have the elecion in their hands. The statement was issued last night by the prohibition forces in the city.

Other bodies acquire rigidity when spun rapidly. Thus a piece of chain if placed on a wheel and made to revolve rapidly will form a perfect circle and if thrown off the wheel suddenly will roll across the table or the floor just like a solid hoop until its speed is diminished, when it will fall into a huddled mass.

It is a strange fact that spinning bodies always tend to point to the north star-the pole star. Gently, but firmly, they seem to tug at their moor ings in an effort to assume the angle that will point them in that direction Once they have attained it they do not

Spinning a top is not always child's play, although it has generally been regarded as a juvenile sport. Once in England top whipping was practically ordered by law. There was a huge top formerly provided in every village to be whipped in frosty weather that the peasants might be kept warm by the exercise and out of mischief while they could not work. Shakespeare in "Twelfth Night" says, "His brains turn like a parish top." Ben Jonson in "New Inn" writes, "He spins like parish top," and Beaumont and Fletcher have "dances like a town top Down in a coal mine, underneath the and reels and hobbles." Evelyn, the diarist, speaking of the uses of willow wood, says that it was ordered that

Of late years, however, science has taken a hand in spinning tops with fruitful results. From spinning tops we can learn many interesting and And anxiously my kindred watch prove that the earth revolves on its axis and calculate at what speed.

The phenomena of spinning bodies

If, now, you want to prove the rotation of the earth by means of a spinning top you can do so as follows Provide yourself with a gyrostat capable of being driven by electricity so that it can run for twenty-four hours or more without stopping. Set this going and point it to the north or pole star It will soon assume that direction. Now, as the axis of the top is pointed in a certain direction (say the north wall of the room; and stays there, without ever moving, this will will point to the west and six hours later to the south, six hours later to the east, and at the conclusion of the twenty-four hours it will have completed the circle and will again be pointing due north. It will have completed the circuit of the four walls of the

What does this mean? It means that the room has revolved round the top, but as the room is fixed to the solid earth it implies that the whole earth has revolved round the top, which alone remained stationary. Consequently we have proved by this means that the earth has turned once round on its axis, and that it does so turn and that the heavens remain still and stationary.

Many interesting astronomical dis coveries have been made by the aid of spinning tops, and the facts obtain ed by their study have been applied to the rotation of heavenly bodies, the earth included, and the "wabble" of its axis has been calculated by this means. In many ways, therefore, the spinning top is a valuable scientific instrument. -Hereward Carrington in New York World

HENRY MILLER'S

VARIOUS CREATIONS In the past seven years Henry Miller has appeared continuously and in that long period he has played but four roles. But these four roles from a gallery of contrasting types and because of the actor-manager's success

in them he has played nearly three seasons each in two of them and two seasons in the others. The characters created by the notable actor range from the serious role of "Stepher Ghent," in "The Great Divide," to the appealing "Nell Sumner" in "The Rainbow," "Stephen Ghent" was a man of the crude West, vital with life and hiding beneath the rough exterior of a prospector the heart of a man "Neil Sumner" is a a man of worldly polish, a bit cynical from loveliness, a seeker for amusement among the fast set, a man of sentiment. Both the rough miner of "The Great Di-vide," and the polished man of the world in "The Rainbow" are redeemed by love, the first by a wife, the last by the love of a winsome daughter. Mr Miller will be seen in his newest role at the Heilig theatre for three nights starting Monday, Many believe it the best part he has played in recent years.
