

FASTER FORWARD

Cancer never calls timeout. AIDS doesn't take a day off. The toughest challenges in medicine don't hit pause. So at OHSU, neither do we.

By believing in big ideas, we've already made medical history – from the first-ever artificial heart valve to the world's first targeted cancer treatment.

Now we're moving forward, taking on even more challenges. Like the first grand-scale program to detect and defeat cancer earlier than ever. And a revolutionary AIDS vaccine that's headed to clinical trials. Powered by discovery, supported by amazing generosity.

At OHSU, we believe impossible is unacceptable. The future is waiting. Your gift will make the difference. Join us.
