

ALL ABOUT SNOW TIRES

When it comes to driving through winter weather, your tires are the ones that take the brunt of the punishment. But you can arm your tires to make sure you reach your destination safely – even in the snow.

SNOW

Many car-makers and repair technicians recommend mounting snow tires to your vehicle before the winter driving season. These specially designed tires are made to help you trek through the snow – even in areas of heavy accumulation.

If you choose to go down this route, be sure to splurge on all four tires. Your alignment can be thrown off if you drive on two standard and two snow tires, and that can cause bigger problems for your vehicle down the road.

And keep your standard tires handy. Once the winter lets up, you'll be happy to get them back on your vehicle to improve your fuel efficiency and overall handling.

ALL-SEASON TIRES

Another option is all-season tires that you drive year-round – winter and summer. This will help you avoid having to remember to change your tires before the winter weather or needing to store two sets of rims.

While all-season tires are more effective than a standard tire, you won't get the full advantage of having specialized snow tires on your vehicle. These tires are designed specifically to help drivers blast through snow and are tested vigorously for this purpose.

TIRE TYPE & TREAD

Snow tires are the recommended options in areas with heavy winter weather. But you may still decide to stick with your regular tires for price or convenience purposes. If you do, be sure to check the tread depth of your tires. Replace any tire that has less than 3/32 inches of tread, the American Automobile Association stated.
