Fake fish invented in Richland will help save real fish

The devices are deployed around the world

A2

By ANNETTE CARY Tri-City Herald

RICHLAND, Wash. Mechanical fish developed in Richland have made their way through dams from Ice Harbor near Pasco to the Mekong River in Southeast Asia.

Now hundreds more are expected to be deployed around the world, thanks to an agreement to commercialize the technology developed at Pacific Northwest National Laboratory.

The fish are just 3.5 inches long, about the size of a larger salmon smolt.

But they are packed with instrumentation that can give scientists, and now dams and other hydro facility operators, an idea of what passing through dams is like for fish.

The Sensor Fish record about 2,000 measurements per second as they swim

Tri-City Herald

A prototype of the Sensor Fish is shown as it looked two decades ago as Pacific Northwest National Laboratory researchers worked to develop a technology that could collect data on the stresses on fish traveling through dams.

through the turbulent waters a laboratory fellow at and turbines at hydroelectric facilities.

"The Sensor Fish provides information to help engineers design more fishfriendly turbines going forward," said Daniel Deng, Pacific Northwest National Laboratory.

On the journey of less than two minutes in the fast-moving water through a dam, they record acceleration, orientation, pressure

and the speed at which the sensor fish rotates.

The Sensor Fish developed by Pacific Northwest National Laboratory is now commercially available for studying the stresses on fish as they travel through

specific dams around the sor Fish has helped show the world.

It allows dam operators to help understand the stresses on real fish, such as juvenile salmon, as they take a potentially wild ride through dams and then make improvements to structures.

PNNL began developing the Sensor Fish in the late 1990s to improve fish survival at the hydroelectric dams along the Pacific Northwest's Columbia River basin, including on the Snake River.

"The vast majority of juvenile salmon and steelhead passing through the turbines survive without injury in the Columbia River basin," Deng said. "Still we want to understand more about the injuries and mortality that do occur from abrupt pressure changes in dam turbine chambers."

Fish can be hurt or disoriented by the turbulence of the water and the blades of a turbine can strike them, if that's the route they take through the dam. But research with an early version of the Senpressure changes in the dam turbine chambers that also can harm fish.

A fish traveling through a dam can experience an enormous drop in pressure in an instant and just as quickly return to normal pressure, according to the laboratory.

The lab compares it to a human zipping to the top of Mount Everest in the blink of an eve.

The sudden pressure changes can injure or kill fish that depend on a balloon-like organ known as a swim bladder to maintain buoyancy at different depths.

The bladder shrinks as the fish goes deeper and pressures are greater and increases in size as the fish rise, instantly expanding four or eight fold in some species.

Data provided by the Sensor Fish can help to redesign dam turbines so they create less severe pressure changes while maintaining or even improving power production, according to the laboratory.

Remembrance set for fallen Seaside officer

The Daily Astorian

 ${\rm SEASIDE} - {\rm A \ remem-}$ brance ceremony will be held Tuesday to remember the late Seaside Police Sgt. Jason Goodding.

Goodding, 39, was patrolling downtown the night of Feb. 5, 2016 when he was shot and killed while attempting to serve a warrant.

"We should never forget Jason and the legacy he left with our department and our community," Lt. Bruce Holt said in a news release. "He's always with us, but this ceremony gives us a special opportunity to pay our

respects and bring family, friends and others together cer's prayer.

man."

brance will be held at 6:30 p.m. outside of the Seaside Police Department and will include a ceremony,

ON THE RECORD

DUII

• At 6 p.m. on Sunday, Janessa Wright, 24, of Astoria, was arrested by Seaside police on the 200 block of Roosevelt Drive after she allegedly hit the bus stop near the McDonald's restaurant and then continued to drive. She was charged with reckless driving, driving under the influence of intoxicants, hit-and-run and resisting arrest. Her blood alcohol content was 0.25 percent. • At 12:30 a.m. on Sat-

urday, Michael Thomas Pool, 43, of Milwaukie, was arrested by Oregon State Police on U.S. Highway 26 near milepost 30 and charged with DUII. His blood alcohol content was 0.10 percent.

OBITUARY POLICY

The Daily Astorian publishes paid obituaries. The obituary can include a small photo and, for veterans, a flag symbol at no charge. The deadline for all obituaries is 9 a.m. the business day prior.

Obituaries may be edited for spelling, proper punctuation and style. Death notices and upcoming services will be published at no charge. Notices must be submitted by 9 a.m. the day of publication.

Obituaries and notices may be submitted online at DailyAstorian.com/forms/obits, by email at ewilson@dailyastorian.com, placed via the funeral home or in person at The Daily Astorian office, 949 Exchange St. in Astoria.

For more information, call 503-325-3211, ext. 257.
