

# GILBERT-VAUGHAN IMPLEMENT COMPANY

There is no great mystery about wagon-building. It's just like the fellow said about making a piano: "Anybody could do it if he had the tools, could get the material and *know how*." For the same reason there is no mystery about the

**Studebaker Excellence,  
Studebaker Superiority**

Because we do have the tools—the best possible facilities for vehicle and harness making—the largest vehicle factory in the world (it covers 101 acres) and hundreds of special machines of our own invention.

We do get the materials. Because we are the largest buyers of vehicle materials in the world, we get *first choice* and we *know how to choose*.

We do know how. Our "know how" is founded on more than 50 years experience in successful vehicle making.

But, more than that, our superior facilities, our extra choice materials, our exceptional experience, are all backed by the determination to make every Studebaker vehicle as nearly perfect as ingenuity, skill and care can make it.

That's why we maintain extensive laboratories for testing all materials used in our factory.

That's why we inspect and re-inspect every piece of work turned out by every department.

And that's why the Studebaker enjoys the reputation it has—more than a million in daily use—used the world over and growing every day in popularity.

**Studebaker**

THE STUDEBAKER  
A Wagon with a Reputation.

If you are a man who wants the best  
**Come in and See the  
STUDEBAKER**

Before you buy a farm wagon, a buggy, a carriage or anything in the vehicle or harness line. You will not be asked to buy on reputation alone. *Point by point* it will be shown to you wherein the Studebaker excels. You do not buy a vehicle every season. You want to be sure of your investment. You want to be thoroughly satisfied. Come where you can see for yourself before you put your money in.

Gilbert-Vaughan Implement Co. Hood River, Ore.

## Here's Why You Should Use **ORTHO-ARSENATE OF LEAD**

1. It is SURE to KILL--if you have it in the right place at the right time--because it is strength and purity.
2. It will not produce poisoning of the soil.
3. It CANNOT BURN. Arsenate itself will burn, but when properly combined with lead it cannot.
4. A United States patent protects the manufacturers in their process of perfectly combining these substances.
5. It is put up in a STEEL container, hence full net weight always; no leakage.
6. If you carry over part of a package the cover fits so snugly as to make the can water and air tight. Wood packages leak, and tin packages rust; we avoid both.
7. It is put up in convenient sizes for handling—5, 10, 20 and 50 pound cans.
8. Material has been analyzed and passed upon by the experiment stations of California, Oregon, Washington and Utah.
9. It costs no more than other kinds.
10. LAST, BUT NOT LEAST, it is a natural arsenate and will not precipitate the sulphur in your first spraying with lime and sulphur.
