

TIME IS MONEY

And we would like the pleasure of showing you how you can save them both. Sounds extravagant? Not a bit! Let us prove it to you. Perhaps you are clearing land. You can do just as much work with pick and shovel and your own muscles. You agree without argument that you could do more work in less time with a good stump puller. But there's the rub! What machine? You want a puller that is simple enough that you need lose no time studying how it operates---a machine which will save you time in its actual operation. There are several machines which will pull stumps equally as well as our **Faultless Machine**, but they can't do it in as short a time. The arrangement for taking up slack in the cable will actually save you one-third of your time. You don't wait for your team to walk round and round winding cable---you do it yourself and save the time. We don't ask you to take our word for it---we want you to investigate for yourself.

And now for the first plowing. Fifty times a day your old style plow gets stuck under a root. Maybe you lose an hour getting it loose. If you had one of our **Rotaty Goodnough Plows**, this trouble and loss of time could be entirely eliminated. It is a riding plow, with various attachments for side hill work. The large steel disc, 26 inches in diameter, is absolutely guaranteed against breakage. If it encounters a root which it cannot cut it rides over it, but *never, never gets stuck*. Think of the hours of time you can save in a week. A few dollars more invested in your equipment in this line will earn for you from *one to five hundred per cent a season*.

OUR AUTO ACCESSORY DEPARTMENT

has had a phenomenal growth and we appreciate the **liberal support** accorded us by Auto Owners. We shall endeavor in every way to merit your continued patronage and promise you even better service than in the past.
