Keeping dairy cows means producing more food on fewer acres and consequently getting greater profits.

The farmer should make use of his porches and easy chairs on rainy days. There is no reason why he should not enjoy some of these pleasures.

Soil in the average grain growing sections contains far too small an amount of humus to make advisable the burning of straw. It should be scattered if it cannot be converted into manure and later plowed under.

August is an excellent time for the killing of pasture and roadside weeds, for at this time plants put forth their greatest effort in the production of seed with the result that the root system is left in a condition of low vitality.

Many an otherwise valuable horse is practically ruined by careless hired help or proprietors striking them on the head. Hit in this way, a horse will throw its head up for months afterward whenever a quick motion is made close to it.

Two or three figs well chewed and eaten at breakfast are recommended by leading physicians as an excellent yet gentle tonic for a sluggish system. Moreover, from the standpoint of food value figs are worth nearly as much as meat.

A speaker before the International Shippers' association stated that if girls knew the real value of apples as complexion beautifiers they would be eating them morning, noon and night—in fact, would have apples in their pockets all the time.

In June time the writer is inclined to the view that there is no dish quite equal to strawberries and thick cream, but in August he is inclined to have a good deal the same opinion of a dish of ripe, luscious sliced tomatoes and some of the same kind of cream.

Reports have been coming in from many sections of the corn belt the past two or three weeks telling of extensive damage being done to fields of corn by the big white grubs, the larvae of the June or thunder bug. The grubs work in the hills and cut and eat the roots of the corn plants. In one instance as high as fifteen acres was reported ruined by the grubs.

PICK SEED EARLY.
The fittest time to agitate the seed corn question is not in March and April, just before the supply is needed to put into the planter boxes, nor in the fall after there have been several hard freezes, but now—while the corn is denting and maturing. It is probably a fair statement of the case that if every farmer who lives in the northern portion of the corn belt, where the seed corn question usually gives most concern, would select his seed ears before Sept. 20, hang them up in the sunshine where there is good movement of air, finish drying the seed out if necessary by the sitting room stove and store it where it would keep dry, he would not have any seed corn problem on his hands next spring. Perhaps in a majority of seasons in which the corn ripens early and dries out thoroughly seed ears may be selected as late as husking time, but several seasons in the last dozen years have not been of this kind, with the result that a good deal of seed saved at husking time was not worth a copper. Picking seed corn early as suggested not only insures good seed, but early maturing types of corn can be selected. In picking the supply get four or five times as much as you need yourself. This will not only give you a better selection for the ears you use for your own planting, but your neighbor may want it at \$8 to \$8 a bushel, as some farmers did last spring.

EVERYBODY SHOULD ENLIST.
With rats doing a damage annually which is put by the department of agriculture at \$100,000,000, it is not strange that a vigorous campaign is being waged in many quarters for their extermination. While a good deal of this damage is borne by farmers in damage done to corn, small grain and vegetables, a very heavy toll is also exacted from manufacturers and wholesale and retail dealers in cloth, leather and other goods. But this financial loss is but a part of the score against the rat. The fondness of rats for phosphorus is said to be responsible for many disastrous fires, matches being carried by the rodents into their runs beneath storehouses and other buildings. A further reason for the rat campaign is that they are the chief carriers of bubonic plague and other malignant diseases. The rat is a curse on the face of the earth, and both old folks and children should wage an unsparring fight against them with poison, traps and other means.

THE SILENT TIME.
There is a time about now when the birds of field and wood lot are strangely silent. Whether it is because courtship and homemaking days for the season are over with most of them, whether they make transient migrations to other haunts or whether they sense the approach of fall and the gradual failure of what has been an abundant food supply we do not know. Perhaps all three elements enter. But, whatever the cause, there is a sense of loss and loneliness with the rare June time music gone. With the song of robin and thrush and meadow lark have passed the cheery notes of the meadow frog, and instead of these have come the monotone of the crickets and the plaintive challenge of the tree toad.
