THE UMBRELLA.

Its Antiquity and its Introduction into English Writings.

Umbrellas were first used in a country where the intensity of the light and heat rendered a shade almost indispensable, and discoveries at Nineveh show that they were carried before the king in time of peace and sometimes in war.

In 1608 Thomas Coryat traveled in Italy and wrote, "The people do carry umbrellas—that is, things that minister shadow unto them for shelter against the scorching of the sun."

In Beaumont and Fletcher's play, 1640, "Rule a Wife and Have a Wife," are these words, which prove that they were then known in England: "Are you at ease? Now is your heart at ease. Now you have got a shadow, an umbrella, to keep the world's scorching opinion from your fair credit."

In 1786 Jonas Hanway died in a house in Red Lion square. He was the first man who ventured to walk the streets of London with an umbrella over his head.

Dr. Shebhear was committed in the court of king's bench for a libel and was sentenced to stand in the pillory, but a servant in livery was hired to hold an umbrella over his head to keep off the rain.

Cowper in the "Task," 1784, thus describes the country girl who dresses above her condition: Expect her soon with foot boy at her heels. No longer blushing for her awkward load, Her train and her umbrellas all her cars.

The Queer Chameleon.

There is nothing in the world will induce a chameleon to take even the slightest apparent interest in its surroundings unless it be the sight of what it considers a toothsome insect. The chameleon's method of taking its prey is very curious, being effected by shooting out an enormously long, wormlike tongue, the end of which is clubbed and covered with a viscid secretion, to which the insects stick and are thus drawn into its mouth. The actual projection of the tongue is made with marvelous rapidity. The eyes of the chameleon are very curious. They are very large, but, with the exception of a small opening in the center, are covered with skin. They are also entirely independent of each other, with the result that occasionally the creature is looking forward over its nose with one eye, while with the other it is intently watching something directly behind it.

The Only Rest the Mind Needs Is When You Go to Sleep

By Dr. EDWARD LEE THORNDIKE of Columbia University

DURING NO WAKING MOMENT IS THERE ANY LEGITIMATE EXCUSE FOR IDLENESS ON THE PART OF THE MIND. INSTEAD OF A REST THE MIND SHOULD BE GIVEN NEW WORK AND SUPPLIED WITH A NEW INTEREST AND MOTIVES. IT SHOULD NEVER BE ALLOWED TO REST SAVE IN SLEEP.

Repugnance to work is overcome by seeing results. So until the habit of work is firmly fixed upon one it is necessary to engage in work for which the brain of the worker is peculiarly fitted, in which it TAKES PLEASURE and which brings it tangible results.

It would be impossible for an inventor to continue at work for weeks and months, as Edison, for instance, has frequently done, were it not that his interest was KEPT ALIVE BY SUCCESSFUL ACHIEVEMENT.

After the Doctor-- THE DRUGGIST

The doctor's work is only half what has to be done for the patient. And if the druggist be lacking in ability and care the prescription might as well have never been written. But we make a special study of each case and our own medical knowledge is thorough enough to be of great use to us in those sometimes occurring cases when the doctor, in his haste, makes a slight error.
