LETTER FROM SALT DAKE.

GREAT SALT LAKE CITY, June 4. '64. Eo. STATESMAN: Perhaps some of your readers would like to hear once more from the "City of the Saints." Well, our naturally gen-"City of the Saints." Well, our naturally gen-erous disposition in endeavoring to impart to others what little we know ourselves, prompts us to note a few of the most prominent of the Saints and their handlworks. Brigham, the President, Translator, Seer and Revelator, (and persecutor) is the head of all the institu-tions of this value, as also of a very large tions of this valley-as also of a very large family ! He has his Twelve Apostles, Seventy Elders, scores of Bishops and numerous Da-stroying Angels, (whose daty it is to "put people out of the way") all of whom are at his building : and should a poor Saint chance to dis-cover that he is on the wrong road, and make

such known to his "companions in misery," ten chances to one---if these "Angels" are made acquaint with the facts, and he's a man who knows "too mach" for the good of the Church--if he don't fail to wake up some fine morning and find himself dead ! and had himself dead ! Of course you have all read of the great Tabernacie of the Saints-something after the fashion of the tabernacies of old-well, its not

... The Marion Rifles, Captain May, enjoyed in sport of target shooting on the opposite side i the river, last Saturday afternoon-the prize ling the silver goble presented by Dr. Loryea, the distance was 150 yards, and out of 48 shots red, 25 strack the target. Sergeant Major the leaders do not, for a moment, entertain an idea that it will ever be completed ; but it serves them in various ways : it serves to show who are getting lukewarm. for the indifferent will shirk working on it, and also of keeping the mind of the poor Saint occupied on church affairs, and of impressing him with the idea that he is ad-

vancing the cause of "suffering humanity" and gaining the good will of the Lord. But what gaming the good will of the Lord. But what is the use of my continuing this subject, when it can all be told in word 7—humbug ! Everybody appears to be ranning mad on the subject of mines ; numerous ledges have been discovered containing silver, and said ledges have been subdivided into hundreds of shartes, and these sinces have been the means of hundreds of measures may been the means

with "aliver on the brain." Now, I do not wish you to infer by this that your correspondent thinks it another humbug. No, not at all ; but he merely wishes to impress you with the con-viction that his hopes are far stronger than his faith. Undoubtedly there is silver in some of the ledges discovered, and if we can believ-the reports of assayers, who have tried the rock, some of there ledges contain it to the amount of \$216 per ton ; but where self-inter-ent to at take. est is at stake, we are prone not to, believe an assayer any sooner than "any other man."-However, these ledges do contain lead, iron and copper, which will eventually enrich this country-when the iron horse wends its way

country—when the iron horse wends its way o'er these vast deserts and ragged mountains— bat which, owing to our isolated position and the lack of transportation to any portion of the world where such minerals are required, are at present valueless, and will not pay foreworking. However, better judges than I, tell us (and it may be so) that the silver alone will amply re-ward the miner for his labor; and the sangaine shareholders, as well as the ardent friends of the walfare of the Constraint of the sangaine

welfare of the Territory, all await with hope and confidence the development of the embryo mines.

mines. Mule trains have already passed through this place for the northern mines; and if we are to judge from the reported emigration be-hind, the Pacific States and Territories may prepare for such an immigration as they have uever had the pleasure of receiving in any one year previous to this. If they are loyal, we say "welcome:" but if they are not, they will be forced to take the "oath" so often before they reach their wanted destination, that they will hardly feel like "shootine off" their monthe

.... The body of a man known as Jimmy mith, an Irishman, who was lately living with samuel Beckett, Eola, was found last Monday evening in the Willamette river, above town. An ary of inquest summoned by D. D. Pretyman, fary of inquest summoned by D. D. Pretyman, ating corner af Polk, found that Smith came to his death by accidental drowning about the 22d of May last. We have received a neatly printed cata-the work of the day as follows, to-wit:

of the day as follows, to-wit: 1. That we feel it to be the duty of all Chris-tians "to be subject to the powers that he," and that to as, the rulers of our land is that power. 2. That our undivided sympathies are with them in their efforts to crush out this wicked rebellion, and restore peace and order to our distracted country. 3. That we tender to our faithful, suffering we diere in arms for the defence of our property and that we tender to our faithful, suffering we diere in arms for the defence of our property and that we tender to our faithful, suffering we diere in arms for the defence of our property tares give to lambs!"

tures give to lambs !" sorting for the Dalles, and will, as near as we an learn, fill up the number required.—Orga-ian, June 22. Recruits for the Road Expedition come in apidly, and at the present rate of progress Capt. Mery will have his company full before the closer

NEW QUARTZ ORUSHER AND ORE AMAL-GAMATOR.

The Alta California testifica to the operation of the quarts ormsher and anialgamator, invented and about to be patented by Wm. H. Scoville, of San Francisco, whose "rock chewer" has been doing such signal service for a year or two past at the foot of Market street, in pre-paring rock for macadamizing the streets of San Francisco. The new quartz crusher is at work at Steen's machine shep, on the cast side of Fremont street, between Market and Mission, where those interested in mining enterprise are invited to examine it. This machine differs in

where those interested in fitting enterprise are invited to examine it. This machine differs in many respects from anything yet employed for the purpose, and seems to be admirably calcu-lated to reduce the experses of working mines, at the same time doing its work as thereogly and effectually as it can be done by any other. It is pyramidal in shape, and about sine feet in hight, including the feed-hopper. Unlike the ordinary quariz-crushing mills, it works entirely on the rotary principle, and as its movements are uniform there is no more joiling or jarring than in a common floor mill; indeed, it reasen-bles a patent plantation horse power ears mill, such as used to be run on the large plantations of the South for amplying the hands with ment, more than it does a common quartz mill. The plan of the null may be briefly described as follows : At the top is a feed-hopper, into which the quartz, broken to about the size of com-mon macadamizing rock, is thrown. The rock passes down against a pair of upright cog-roll-

passes down against a pair of upright cog-roll-ers. something like the old-fashioned rollers used for crushing apples in a cider mill, which reduce it to the size of grains of wheat and coffee, when it passes over an inclined plain, unning between two revolving cylinders of heet iron, from the bottom of which it is discharged in a steady stream into a circular trough or gutter of cast iron. Four Chile wheels, the edges of which are so constructed as to secure a greatly increased grinding or pul-verizing power, travel around in this gutter or trough, reducing the quartz, now mixed with water, to a fineness corresponding with that of ordinary andotted corn meal. These whichs can be made to press lightly or heavily, as dethe quartz is reduced to the required fineness, it is washed out of this trough over the outer edge, upou a wire screen, through which it is sifted into another gutter or trough, in which Into another gutter or trongs, in which heavy unifers revolve, completing the reduc-tion, and transforming it into an impalpable paste, ready for the addition of the quicksilver. Ores yielding gold alone can be worked in this machine without using a separate amalgamat-ing pan; and for other ores any description of pan can be used. The cost of any of these part can be used. The cost of any of these machines capable of crushing twelve tons of rock per diem, with eight horse power, or a ca-pacity equivalent to a twelve stamp mill of the common pattern, is about \$2,500; and the time required to put it up, ready for running, is not more than 48 hours at most.

OUR SCHOOLS.

EDS STATESMAN: As the instruction of the rising generation should be the greatest aim of the present, the best means should be employed and the most strict attention given to the accom-plishment of this object. The present system of free schools have done incalculable value to the elevation of man. We all, no doubt, have cause to bless that peenliar institution, the district school.

<text><text><text><text><text><text><text> Another point which should receive attention A RE now readving and opening a very large at Another point which should receive attention is the symmetrical development and enture of children physically as well as mentally. They should have plenty of healthful exercise and sound bodily training. The school should not be turned, however, into a ball or concert. What-ever is done in school should be done as work— not as play. Give children as much opportunity to play as you please, but let play be play, and work be work. But this sufficient is expanding and perhaps I am intrading. Where is the baacher who will show us a reality good school : a great school : a school worthy to be held up as a model for all the world 1 JAS. W. PARKER. Dauglas Co., May 30, 1864. Chalos

The Raitinoan Qurestion, —The Statesmen and Sector are discussing the respective merits of the two proposed raitinatis rounds, can at which is before and as she had comments in the state-partice of the continent. It appears that orn fair is to leave the main trank of the Pacific Raitinad at Saht Lake City, and terminate mark the head of navigation on the Columbia. The Pacific Raitinad through Northern California, and Oregon, and terminate at some accessible point on the lower Columbia. Both of the shows named journals favor the latter proposition, and addites many cognet researes to justify their preference. 17 A verdict has been rendered in a New York court which establishes, so far as that court is concerned, a principle of marked im-portance in regard to the hability of Telegraph portance in regard to the maining of Telegraph companies for the accuracy of their dispatches. It seems that a firm telegraphed to their agents in New York to sell five hundred shares of Southern Michigan stock at the morning Board and buy five hundred Hudson in the alternoon. The word "Hudson " was emitted in the dis-patch, and five hundred Southern Michigan track the Theorem Southern Michigan were bought. The result was a heavy loss to the parties who had given the order, and this loss was directly due to the mistake in the transmission of the dispatch. The result was a verdect in favor of the claimants, thus establishing the principle that Telegraph companies are responsible, like other common carriers, for the accuracy with which they transmit the messages intrusted to them.

IP Mr. Winters, of Nevada Territory, pur hased the race horse Norfolk, at the Sa chased the race horse Norfolk, at the Sanitary Fair in St. Lonis, for -15,001. The St. Louis Republican, says some curiosity was manifest-ed to know why that one dollar in excess of the ed to know why that one dollar in excess of the fifteen thousand, was exacted. It was ex-plained by the statement that Mr. Alexander, when the paid 15,000 dollars for Lexington, then blind, was badgered by some people, for paying so large a sum for a blind horse. He was determined to have it to say that one of his colts sold for more money than his sire, and so Norfolk brought back to his owner the sum paid for his sire, and one dollar more. This is the largest sum ever paid for a racing horse in America. Glencoe cost the purchaser \$30,000, but he was bought in England.—Flag.

THE HOME MANUPACTURE MOVEMENT.-A jetter from New York eity says : The ladiest movement for the curtailment of foreign luxs; ity extending itself. At a fashiouable party at the mansion of one of the wealthiest meri-Avenue, a nearly printed "pledge" was hand ed around among the ladies to sign, thus com-mitting them against buying, for the present any more silks, satins, velvets, lages, or my other foreign luxuries. Of source creryboilty signed it; and when the assemblage was dis-persing, the bostess announced that at her next to come, the ladies in values, and the gentlement in saturet and corduror. The sature of the set of the structure in the source of the set of the structure to come, the ladies in values, and the gentlement in saturet and corduror. The source of the set of the structure in the structure in the source of the structure to come, the ladies in values, and the gentlement in saturet and corduror.
