What a Whale Weighs.

New York Evening World. Have you my loss of the size of the common Greenland whale? Nillson, the moologist, estimates the full-grown animal, to average 100 tons, or 25,000 pounds. That is to say, a whale weighs as much as about 30 elephants or 400 hears. Of course some run larger than this. There are tales among old whalers of whales 119 feet long, and weighing at least 150 tons. But such are not seen in these days. A W-foot whale is a big one now.
