

TACOMA WENT TO PIECES

Between Boston and Baltimore postponed on account of rain. PHILADELPHIA, Aug. 6.—The two Philadelphia-Washington games scheduled for today were postponed on account of rain.

St. Vrain was wild as a March hare while Salisbury was consistent and scattered the hits. TACOMA, Aug. 6.—Tacoma went to pieces in the fifth inning, and Portland made it safe. Three runs were scored off a base on balls, three errors, a wild pitch and a passed ball.

Table with columns: Player, R, H, P.O., A, E. Lists statistics for Tacoma and Portland players.

Table with columns: Player, R, H, P.O., A, E. Lists statistics for Tacoma and Portland players.

Score by Innings. Tacoma 0 0 0 1 0 0 0 2-3. Portland 0 0 0 0 0 0 1 0-0.

GAME WAS THE WORST EVER. SPOKANE, Aug. 6.—Today's game was absolutely the worst ever witnessed between professional teams on the home grounds.

Table with columns: Player, R, H, P.O., A, E. Lists statistics for Spokane and Seattle players.

Table with columns: Player, R, H, P.O., A, E. Lists statistics for Spokane and Seattle players.

Northwest League Standing. Portland 40, Tacoma 38, Spokane 36, Seattle 34.

Talk of an Eight-Team League. President W. H. Lucas of the Pacific Northwest Baseball League...

Boston Won a Well-Played Game From Philadelphia. BOSTON, Aug. 6.—Perfect playing of the ball-and-run game enabled Boston to defeat Philadelphia.

Chicago Beat Cincinnati. CINCINNATI, Aug. 6.—Chicago was at his best today, and struck out 11 of the locals.

Pittsburg Beat St. Louis. PITTSBURG, Aug. 6.—Pittsburg had Harper scored up, and had the game not been called at the end of the seventh inning the home team gave promise of equaling St. Louis' score of yesterday.

Games Postponed. NEW YORK, Aug. 6.—Today's game between New York and Brooklyn was postponed on account of wet grounds.

National League Standing. Pittsburgh 51, Philadelphia 49, St. Louis 47, Brooklyn 45, Boston 43, New York 42, Cincinnati 39, Chicago 38.

American League Standing. Detroit 48, Milwaukee 46, Milwaukee 44, Milwaukee 42, Milwaukee 40, Milwaukee 38, Milwaukee 36, Milwaukee 34.

Detroit Won the Last Game of the Series From Milwaukee. MILWAUKEE, Aug. 6.—Detroit won the last game of the series today by timely batting.

Games Postponed. BALTIMORE, Aug. 6.—The games between Baltimore and St. Louis were postponed on account of rain.

DO YOU GET UP WITH A LAME BACK?

Kidney Trouble Makes You Miserable. Almost everybody who reads the newspapers is sure to know of the wonderful cures made by Dr. Kilmor's Swamp-Root for the great kidney, liver and bladder remedy.

It is the great medicinal triumph of the nineteenth century; discovered after years of scientific research by Dr. Kilmor, the eminent kidney and bladder specialist, and is wonderfully successful in promptly curing lame back, kidney, bladder, uric acid troubles, when writing mention reading this generous offer in this paper and send your address to Dr. Kilmor & Co., 1111 Broadway, New York.

Dr. Kilmor's Swamp-Root is not recommended for everything but if you have kidney, liver or bladder trouble it will be found just the remedy you need. It has been tested in so many ways, in hospital work, in private practice, among the helpless poor to purchase relief and has proved an answer in every case that a special arrangement has been made by which all readers of this paper who have not already tried it, may have a sample bottle sent free by mail, also a book telling more about Swamp-Root and how to find out if you have kidney or bladder trouble.

When Bunsen and Kirchhoff in their chemical investigations first selected the elements showed that each element was capable, when properly excited, of emitting a number of different kinds of light (colors), and that these different kinds of light were always the same for the same element and entirely characteristic of it, then, and not till then, did we begin to obtain reliable evidence that the atom is complex.

For a long time we had no means of interfering in the least with the constancy of vibration rates inherent in the atom. Then it was found that simply changing the electric arc in an atmosphere of air, compressed to nine or ten times the ordinary pressure, would cause these spectral lines to widen and vary; here was a means affecting the internal rate of vibration of the atom. Zeeman next found that if the source of light is placed in a strong magnetic field the vibrations of the atoms are seriously affected in this case a single line might be broken up into two, or three, or four, or six, and these component lines, when examined with the instruments for the study of the spectrum, were found to be separated in different ways, each way, however, readily recognized as well known, inasmuch as its motion is affected by a magnetic field.

It is in reality the internal rate of atom vibrates (several hundred million million times per second) to give a certain color. Here then are data on the mechanism of the atom. In the X-ray tube the pale blue light, which seems to stream across the tube and impinging on the other and produce the X-rays in its intensity, is made up of small particles, each carrying a charge of negative electricity; it is the "radiant matter" of Professor Crookes. This is evidence as to the relation between the size of the atom and the charge of electricity which it is carrying.

If we send a quantity of electricity through a solution of salt, for example, a double process is immediately started, the sodium atom with its positive charge goes in one direction, the chlorine atom with its negative charge goes in the other way with a negative charge. Each of these little travelers was called an "ion" by Faraday, and is still so called. In order to conduct electricity a molecule in solution must be able to break up into ions.

Bequerel found that uranium and its salts emit a peculiar radiation continuing to act for a long time after the source is removed. It is proved to be infinitesimal particles, shot off from the salt. They are so small that a square inch would only radiate one grain of certain salts in ten thousand million years. These rays are called alpha, beta and gamma rays. They are all made up of particles that would carry them to the sun in 10 or 20 minutes, and which are able to knock the molecules of the air into their ions and render it a conductor of electricity as long as they last. J. J. Thompson finds that in a number of cases he is able to knock off about a thousandth of an atom, and with a certain quantity of negative electricity, leaving the rest of the atom positively charged.

The infinitely large is easy to comprehend, the universe has plenty of room, and we can easily imagine plenty of room beyond for several more universes. But consider the infinitely small. Maxwell placed the number of hydrogen atoms in a cubic inch, under normal conditions, at about three hundred million million million; Crookes put it at fifteen thousand million million million, and Lord Kelvin figures fairly confident that there are not more than a ninety thousand million million. The smallest particle of matter visible under our best microscopes may well contain 500,000,000 atoms.

One can thus appreciate the truth of the statement of the late Professor Rowland that "a grand piano is simplicity itself when compared to an iron atom."

An Invitation From a Duchess. NEW YORK Times. Every now and then there arises the question of etiquette as to how certain titled people should be addressed and as to the manner in which they sign their letters and telegrams. Many women who have married titles abroad "catch on" to these little details very quickly. As there are now two living American duchesses, one in America and one in England, it may be interesting to know their formula. Here is the copy of a telegram received by a young American "widow" in London last week, coming from the Duchess of Manchester (see Zimmerman) who is said to have fallen right in the ways and manners of English women of high rank, without losing any of her American charm or individuality. Her dispatch reads:

Mrs. ————, Tandragee, July 13. Miss ————, Can you come Tuesday and spend week with us, Tandragee? HELENA MANCHESTER.

Oh Woman, Lovely Woman! Woman's capacity for doing things which, if done by a man, would make him the butt of gentle ridicule, manifests itself on the street-cars as it does in every other place. A fine example of this was

German Official Changes. BERLIN, Aug. 6.—Herr von Koeller, Governor of Schleswig-Holstein, has been appointed Secretary of State of Alsace-Lorraine, in succession to Herr von Herff. Herr von Koeller resigned some time ago.

Rainfall in India. LONDON, Aug. 6.—Lord Curzon, of Kedleston, Governor-General of India, telegraphs that the rain in the Indian districts is only half the normal fall, but that the crop prospects are fair. The total number of persons on the relief rolls is 563,000.

Anti-American Crusade. VIENNA, Aug. 6.—At a largely attended meeting of shoemakers here tonight it was decided to continue the anti-American

Ordered to Remove Their Queues. NEW YORK, Aug. 6.—An order issued by the head of the Chinese Reform Association calls upon all Chinese in this country to remove their queues. It is said that upon the members of the association it will be more binding than an imperial edict from the hand of the Emperor of China. It will affect several hundred Chinese in this city.

The Mineworkers' Conference. BUFFALO, Commercial. The owl, "big-eyed and solemn," is Mr. James Gordon Bennett's favorite bird. The singular ornament of an owl at bow and stern of his magnificent new steam yacht Lystrata, will not strike those who know his preference as so strange, after all. On his famous old yacht, Naumow, one saw owls everywhere, mounted, plaster, marble, silver, bronze, wood, of all sizes, and in every position. Owls peered into the salt cellars on the main table, formed pepper boxes, wall, handles, walking canes, fire-irons, wall, chairs, and so forth. It is the same at his delightful retreat at Paris.

Mrs. ————, Tandragee, July 13. Miss ————, Can you come Tuesday and spend week with us, Tandragee? HELENA MANCHESTER.

Oh Woman, Lovely Woman! Woman's capacity for doing things which, if done by a man, would make him the butt of gentle ridicule, manifests itself on the street-cars as it does in every other place. A fine example of this was

German Official Changes. BERLIN, Aug. 6.—Herr von Koeller, Governor of Schleswig-Holstein, has been appointed Secretary of State of Alsace-Lorraine, in succession to Herr von Herff. Herr von Koeller resigned some time ago.

Rainfall in India. LONDON, Aug. 6.—Lord Curzon, of Kedleston, Governor-General of India, telegraphs that the rain in the Indian districts is only half the normal fall, but that the crop prospects are fair. The total number of persons on the relief rolls is 563,000.

Anti-American Crusade. VIENNA, Aug. 6.—At a largely attended meeting of shoemakers here tonight it was decided to continue the anti-American

Ordered to Remove Their Queues. NEW YORK, Aug. 6.—An order issued by the head of the Chinese Reform Association calls upon all Chinese in this country to remove their queues. It is said that upon the members of the association it will be more binding than an imperial edict from the hand of the Emperor of China. It will affect several hundred Chinese in this city.
