## Why Have Thousands

Of the best people of Europe and America paid their money for Pianolas? Because the Pianola enables one to play any piano with whatever expression is desired. No knowledge of music is necessary. Perforated rolls of paper direct the siriking of the notes exactly as written, leaving the player the power of controlling the manner in which they shall be struck. Tempo, touch, accent, phrasing, all elements of expression, are perfectly under control.

The Pianola added to the piano places the entire range of music within the reach of everybody.

## A DRYDOCK OF STEEL

Best Material Should Be Used in Construction.

WOOD STRUCTURE NOT LASTING

Many Citizens Think Mistake Will Be Made if Durability Is Sacrificed to Chenpuess-Build Well at the Start.

That the growing commerce of Portland demands a drydock, and that the building of one here would be a wise move, is conceded by all. The only question now is as to what material is best for its con-

on the subject think it advisable to build the dock of steel, because that is the mod-ern method and the most lasting material. A steel dock, it is urged, has elements of permanency about it that are lacking in wood. It is plainly a case, they say, of the best being the cheapest, which is a rule having general application.

While a steel dock may cost 25 per cent was a face of the conservative of the conservati

more than a wooden dock, conservative business men estimate that the extra out-lay would prove the best kind of an investment. It would secure a permanent institution that would not become water-logged, and would practically last indefintely. It would need no renewing or re-placing, as would surely be the case with wooden dock.

The present project of the Port of Portland Commission is for a wooden dock, to cost \$225,000, and the commission has \$400,-000 at its disposal for a dock. If the wooden dock has to be replaced within 10 to 20 years at the same cost, it would certainly seem to be on the side of economy to 10 yest 20 to 25 per cent additional at the start and secure a steel structure that will e permanent and need no replacing.

Drydocks as investments are said to be safe and sure everywhere, and as they re-turn their owners 20 to 25 per cent, they have created riches in many ports.

When the Spanish government wanted a drydock for Havana Harbor it had a firstclass steel dock built on the Tyne, and had it towed 6500 miles. It weighs 4200 tons, and has a lifting power of 10,000

Its construction occupied six In building a floating dock a contractor an come out at the end of his contract as close to his estimates as he can in building a ship. In building a stationary stone dock it often happens that, after a big hole has been scooped out at great ex-pense and a retaining wall put in, an innocent little spring breaks out of the near-by bank, and from a trickle it in-creases to a puddle, and next morning

shows that during the night it has been joined by other little springs and has perhaps pushed the retaining wall away, and again shown the mighty power of water.

Asked as to which they thought would be best for Portland, a steel or wooden drydock, the prominent business men who were seen gave their opinions as follows: J. G. Day, prominent contractor, whose firm built the Cascade Locks-There is only one clars of material worthy of consideration in the construction of a floating drydock, and that is steel. Even were it built of oak, it would be undesirable, and if built of Pacific woods it would need very extensive and continuous repairs in seven or eight years. Building of steel would be best. When parts of it needed would delay the matter only one season, if at all. In the absence of plans and speciwould delay the matter only one season, if at all. In the absence of plans and specifications, on which to base calcula tions, and considering the facilities in the East for getting steel shapes, I think that the cost of a steel dock would but slightly exceed that of a wooden dock. The operating machinery, which would be an expensive part, would cost the same in either kind of dock. The only difference in the cost would be in the construction of the hull. It would cost more money to assemble the different parts of a wooden dock than of a steel one. The facilities for corking steel were demonstrated at the Cascade Locks during the erection of the gates, which we had shipped from the East in sections. We were not required to chip a joint or dfill a rivet hole in the 3,000,000 pounds of steel we used. M. T. Endicott, Chief of the Government Bu-

noyance and expense everywhere, J. Thorburn Ross, manager Title Guarantee & Trust Company - 1 think that we ought to have the dock which experi-ence has demonstrated would be the hest. it would be penny wise and pound foolish to build a dock whose first cost might be less, but the life of which would be very much shorter, and which would be less efficient in its operation. The building of drydocks has passed the experimental siage. Enough of them have been con-structed in the important ports of the world to demonstrate the relative values of wood and steel. My impression is that the steel dock has proved superior to all others. In my judgment we should profit by the experience of others, and if data have not already been gathered for this purpose, they should be obtained forthwith, in order that economy of construc tion and efficiency of operation may be secured. Taxpayers have a right to ex-pect that this be done.

eau of Docks and Yards, recommends the abandonment of projected wooden docks, because they have been a source of an-

James Laidlaw, British Consul - In-building a drydock, while wood would undoubtedly be the most inexpensive in the early days of the enterprise, I think that steel would be the best and cheapest in the long run. If we are going to have a dock I think it is time we had it. To an outsider not connected with the commission, it would seem that much time have been lost. has been lost, and the good work of building a dock should now go forward as rap-idly as possible,

Alfred Tucker, of Meyer, Wilson & Co.— The very best dock is none too good for Portland, especially for its future busi-We want one of the greatest sta-one that will last and will not have to be replaced in a comparatively short

Henry Hewett, marine insurance agent-I am not familiar enough with the details of drydock construction to express an opinion, but considering the great difference in lasting qualities, it seems to me that iron or steel would be preferable to wood, especially as the cost is going to be burdensome and the income perhaps insufficient to renew or replace a wooden dock in case that kind is built. Except in the matter of first cost, steel or from will be preferable to wood, unless there is some technicality that I cannot see. Wood gets waterlogged, but steel does not.

Sol Blumauer-What is worth doing at all is worth doing well. My experience is that a cheap article is dearest in the end. Therefore, if we have a drydock, it should be of steel, and the best that may be had. A drydock whole certain by

vertisement for Portland. When ships would go into it the fact would be telegraphed all over the country. When we have a drydock here many a ship will come here which now goes to Puget

Judge George H. Williams-I think that, if a floating dock is desired, wood would be the material to build it of. If a sta-tionary dock is desired, of course steel is the most durable, but the cost might be out of all proportion. Whether steel or wood be used ought to depend on the difference in the cost of material, and that would be a controlling consideration in choice of construction material. I am pleased to know that Portland is to have a drydock. Such institutions are of great advantage to the commerce of a city.

General Charles F. Beebe-I can hearti-General Charles F. Beebe-1 can hearti-ly commend a wooden drydock if it is properly cared for. Of course, steel is in-destructible, but it would be folly for us to spend two or three times as much for steel as for wood. A first-class wooder dock will last for 50 years. Such docks have been in use for that length of time in New York.

George Taylor, of Taylor, Young & Co.--I think, judging from what I have seen, that wood would be the best. Our native

Liberals Surrendered Colon in an Orderly Manner.

LIFE AND LIBERTY GUARANTEED

Insurgents Turned Over Their Arms to Captain Perry, of the Iowa, Who in Turn Handed Them Over to General Alban.

traffic on the Isthmus, it is expected that the Navy Department will be able to withdraw some of the United States warships now on duty in that quarter, and it is probable that one ship will be with-drawn on either side of the Isthmus. There will be no haste, however, in reducing the naval strength, as the officials feel that the surrender of the Liberals on the Isthmus may not terminate the entire strug-gle throughout Colombia. The country is so extensive and the signs of unrest at interior points are so numerous that it is expected there may be a recurrence of trouble on the Isthmus if the insurgents at other points continue to show strength.
When the Iowa is withdrawn she will probably go to Talcahuano to be docked. The Machias will come north and be

The State Department has received confirmation of the notification from the Co-lombian Government to Venezuela that it has terminated diplomatic relations. This came in the shape of a cablegram from Minister Hart. This action is the result of the hasty withdrawal last August from the Velezuelan capital of Dr. Rico, the Colombian Minister there. Such a breach does not necessarily mean war, COLON, Nov. 28.—The terms of surren-der agreed upon at yesterday's conference on the United States gunboat Marietta, breach is created at the moment when wood is good for the purpose of a dry- and at which the commanding officers of Germany is considering the adoption of

### THE ALGIERS DRYDOCK-THE STYLE OF STRUCTURE THE U. S. GOVERNMENT BUILDS.

The new floating drydock for the naval station at Algiers, La., cost nearly \$11,000,000, and is the largest in the world-The new floating drydock for the naval station at Algiers, La., cost nearly \$11,000,000, and is the largest in the world-being 525 feet in length, with a lifting capacity of 18,000 tons, and capable of handling any vessel of any kind affoat. This drydock was constructed at Sparrows Point, Maryland, and has been successfully towed all the way from Chesapeake Bay to its permanent location on the Lower Mississippl—a most daring and hazardous achievement. The enormous structure had to be towed by powerful turn from Baitimore down Chesapeake Bay, south past Hatteras, across the Guif Stream, through Providence Channel of the Bahamas between Great Abaco and Eleuthera, in and out in a general southeasterly direction among the coral islands and juttings of the British possessions to Sait Key Bunks, just north of Cuba; then the coast of Cuba or the Flororal islands and juttings of the British possessions to Sait Key Bunks, just north of Cuba; then the coast of Cuba or the Flororal islands and juttings of the British possessions to Sait Key Bunks, just north of Cuba; then the coast of Cuba or the Flororal islands and juttings of the British possessions to Sait Key Bunks, just north of Cuba; then the coast of Cuba or the Flororal islands and juttings of the British possessions to Sait Key Bunks, just north of Cuba; then the coast of Cuba or the Flororal islands and juttings of the British possessions to Sait Key Bunks, just north of Cuba; then the coast of Cuba or the Flororal islands and juttings of the British possessions to Sait Key Bunks, just north of Cuba; then the coast of Cuba or the Flororal islands and juttings of the British possessions to Sait Key Bunks, just north of Cuba; then the coast of Cuba or the Flororal islands and juttings of the British possessions to Sait Key Bunks, just north of Cuba; the coast of Cuba or the Flororal islands and juttings of the British possessions to Sait Key Bunks, just north of Cuba; the Cuba of the British and Juttings of the British and Juttings of the British and Juttings of of the Mississippl; and last, but by no means least, over "the bar," against the concentrated current between the jetty walls. The cost of insurance alone was \$50,000 for the trip.

The cost of insurance alone was \$50,000 for the trip.

It is not, the plan of Portland to build a fluction dradock comparable in size or cost with the great Algiers structure. But from the serve it may be determined what importance the Government attaches to enterprises of this wind. The Algiers dock is what is known as total dock. If it is necessary for New Orleans to have a drydock of durable construction, why not Portland?

General Owen Summers, United States Appraiser—Our drydok should be one of undoubted stability, and built for the fucuilt of wood would pecessarily require renewing of decayed parts altogether too often. So it seems to use that steel would be the best material to use in building the dock.

John Vince-I have seen the immense drydocks on the Clyde and at Newcastie, and the largest shipbuilding ports in the world, and have seen the undisputed value of permanency and stability. We want a first-class, permanent drydock here in Portland, and I think it should be built of steel, of course. A wooden structure could not be regarded as permanent in onstruction.

H. C. Breeden-Without having any actual knowledge of the relative merits of steel and wood in the construction of drydocks, it would strike me offhand that steel would be much more lasting. Also in regard to expense, steel might be the most economical in the end. I believe that such is the experience in the construction of ships. We know from our own exper-lence that heavy timbers that are ex-posed to the elements, as a drydock necessarily must be, decay in a few years, and unless the timber to be used in the proposed drydock be scientifically treated with some preservative, it would appear to me that a wooden dock would be but a temporary affair.

Dan McAllen—I am indeed delighted to learn that a drydock is to be built here. Unless the difference in cost will be enormous. I would think that #teel would be the most desirable and permanent mater-ial from which to build the drydock. I hope that there will be no more mistakes made in the location of a drydock as there was 20 years ago. Then our drydock was located in quicksands, and it sank, sank, straight down, and has now reached Yokohama, I suppose.

A. B. Steinbach - Our new drydock should surely be built of steel, by all means. We want the best we can get, and we can't get it up too fast. Steel is material that assures permanency, and that is what we want,

Peter Kerr, of Kerr, Gifford & Co .- Portland ought to have a drydock, and as soon as possible. As to the kind of a dock, I think that the best kind is the kind that will be put into operation at the earliest day.

W. S. Sibson, of the Portland Grain Company-i think that in constructing a drydock steel would be cheaper in the long run, although wood might be cheapest at first.

T. W. Smith, of the Northwest Ware-

substantial material.

G. W. Simons, of the Pacific Bridge Company-A wooden drydock is the most feasible and within our means. Portland wants and needs a drydock, and there should be no quibbling as to the material from which it is constructed. In the present congested condition of the steel

Senor de la Rosa agreed to surrender the Liberal soldiers now at Colon, with their arms, to Captain Perry at noon today. Captain Perry in his turn agreed to hand over these men and their arms later in the day to General Alban, who in turn guaranteed life and liberty to all men recently in arms against the Conservative Government of Colombia. The surrender of arms was to be bona fide in every respect.

At 1120 o'clock this morning a large that the Linited States forces. At 11:30 o'clock this morning a large

number of United States marines and bluejackets landed at Colon and proceeded to the barracks. Here the arms belonging to the Liberal soldiers were taken over by the Americans, in the presence of Captan Perry, the commanders of the warships above mentioned, the American British and French Consuls at Colon and & large concourse of people who sympathized with the Liberals in their surrender.

erals in their surrender.

The Liberal guard patrolling Colon this morning appeared and and downcast. Their behavior, however, has all along een most praiseworthy, and it is not at all an exaggeration to say that they have gained the respect of a large portion of the community, and especially of the foreign element, during their short administration of Colon.

Later in the day sceneral Alban, accompanied by officials of the Conservative Government of Colon, arrived here from

Government of Colon, arrived here from Pahama, and Senor de la Rosa, representing General Domingo Diaz, whose seeretary he is, surrendered himself and the Liberal troops to the Conservative General, in the presence of Captain Perry and the naval and Consular officers.

For years past the barbor of Colon has not been so crowded as it is today. Five men-of-war and several German, Italian and British merchant and passenger and British merchant and passenger steamers, as well as other vessels, are in port. The men-of-war are moored to the wharves. The only flag-bedecked ship in the harbor is the Colombian gunboat General Pizzon. When General Alban received the surreport of the Liberals, the ceived the surrender of the Liberals, the Pinzon blew a series of noisy, quick and irregular notes from her fog horn, indica-tive of her joy at the proceedings. She is now lying quite close to the docks. General Alban is on board.

The majority of the American marines and bluejackets have returned to their vessels. The Suchet has landed a detachment of marines on the property of the French Canal Company. American marines are still guarding the plers and the railroad station. Over 200 men entered

the city with General Alban.

De la Rosa, on handing Alban his sword, said: "I accept the conditions of the treaty to safeguard the lives and lib-erty of my soldiers in Colon. As for my brother and myself, we personally decone to accept the conditions of this treaty."

RESTORATION OF ORDER.

Some of the American Warships Will Be Withdrawn.

WASHINGTON, Nov. 21.—The following cablegram was today received at the Navy Department from Captain Perry, of the University. His profession was that of University. His profession was that of a chemist, and for the past five years he deveted his entire time to the dehouse Company-A drydock will certainly be of great advantage to this port, and it ought to be built of the best and most

Colon, Nov. 2.—Arrangements for sur-render today of Colon and Liberal forces have been completed."

Another cablegram has been received by the State Department from Consul-Gen-eral Gudger, dated at Panama, saying that the Liberals have been defeated, and

that the Government forces are in posses

having once landed, would not be with-drawn. These reports have led to inquir-les between Panama and Washington, bringing out responses that the rumored American occupation was wholly imagin-ary, and that the most positive and definite assurances had been given, that imme-diately on the fulfillment of this Govern-ment's obligation to keep open the trac-fic, our forces would be debarked and all American authority would be terminated. This purpose of the authorities here has been made known to those in influence on the Isthmus and has served to aliay the fears caused by reports of American

Complete Capitulation. WASHINGTON, Nov. 29.-Mr. Herran, the Colombian Charge, said tonight that Genefal Alban will accept nothing abort of a complete capitulation by the rebei forces, with all their arms and ammuni-tion. But it is understood, Mr. Herran added, that General Alban will give tin-munity to the persons and private prop-erty of those who by down their arms. and they may be granted leave to depart on parole. They will not be permitted, however, to remove any of their military supplies from Colon, and their parote wit prevent their joining any of the scattered bands of Liberals at other points.

PROFESSOR WYNN DEAD. Discoverer of a New Process of Gold Extraction.

DENVER, Nov. 29 .- C. W. Wynn, who

recently created a sensation in mining circles by the announcement that he had discovered a process by which he could recover enormous gold values from what have been regarded as low-grade ores, died tonight at St. Joseph's Hospital of strangulated hernia. Professor Wynn had been in poor health for a year.

Little is known by the public about the Wynn process of gold extraction, and it is discredibed by many mining men, but is discredited by many mining men, but the fact that Willard Teller, a brother of United States Senator Henry M. Teller, and ex-Judge Sidney Williams, both prominent attorneys and capitalists of this city, convinced of its truth, became the financial backers of the discoverer, gave it an interest to the public. Pro-fessor Wynn and his partners had been arranging for the establishment of a large plant for the treatment of ore. It is un-derstood that both his partners are the essors of his secret and that his death

had devoted his entire time to the de-velopment of his gold process. He came here from Kansas City last July. CLEVELAND, Nov. 29,-Senator Hanna today gave \$600 as his subscription to
