But my host told me, with a laugh, that his men were merely plowing with dynamite. Then he went on to explain that when a field was to be loosened up the soil to the depth of three or four feet, the cartridges were set in the earth and fired off. They broke up the ground beautifully. They did the work much better, and much more cheaply, than any machine or any manual labor could do. And, in addition to this, they destroyed the parasite called the phylloxera, the bane of the vine-grower, by the use of dynamite. It was admitted, my host said, ever suffered from the phylloxera afterward."
