SEATTLE CATHOLICS WILL ERECT CATHEDRAL TO COST $250,000

A SAIL ON A SIDEWALK

Dr. Joseph T. C. O'Brien, a busy professor of practical physiology at the University of Nebraska, has recently added another credit to his already long list of achievements by demonstrating a simple, yet effective, method of travel that has been hailed as a revolutionary breakthrough in urban transportation. The method, known as "sidewalking," involves the use of a designated area on the side of a street, which is furnished with a continuous sidewalk, benches, and other amenities such as shelters and lighting. The sidewalk is equipped with a series of small elevators and escalators that can transport pedestrians to any floor of the building they desire, without the need for stairs or elevators. The system is designed to be energy-efficient and environmentally friendly, and is expected to reduce traffic congestion and improve the overall quality of life in cities.

VITAL FORCE

Vital Force is created by Glades Tweedle, and is a natural medicine that is known for its ability to relieve colds, coughs, and sore throats. It is prepared from a combination of herbs and spices, and is said to be effective in both adults and children. The product is available in many forms, including lozenges, throat sprays, and teas, and is sold in most drugstores and health food stores.
