During the morning the market showed a tendency toward recovery from yeaterday's decline. The principal ground for lack of faith in the market was the decided decrease in activity at the advances. That is, it was clear that buyens were not disposed to follow the advance, but there seemed to be little pressure to sell at the recovered level. For the second hour of the morning the market was duller than for several weeks. It was inferred from this that the principal buying was to cover shorts and to take profit on the short sales.
