by Railroad and Stage to California.

TOUR OF INLAND EMPIRE

Joseph Gaston Gives His Impressions of a Country of Marvelous and Varied Resources-Experi-

ence in Snow Storm.

PORTLAND, Feb. 21-(Tosthe Editor.)-Leaving Portland on January 15, 1 struck a great snowstorm at Hood River, where the show had reached a depth of six inches. At Biggs at 1 o'clock P. M. the show was eight inches deep and falling rapidly. Taking shelter in a Columbia Southern coach, the passengers. 25 in number, impatiently waited four hours for the train to start for Shaniko. The for the train to start for Shaniko. The rain was held up thus, waiting for a train was held up thus, waring it is in the scheropherders coming down on a freight from Heppner on their way to Wasco, for which service they paid the Columbia Southern \$2.50 cmsh, which shows that Mr. Harriman is running that piece of road for accommodation and not profit.

"cutter."

host, O'Kan-

We were five hours on the road from liggs to Shaniko, 76 miles, which shows Biggs to Shaniko, 70 miles, which shows that Mr. Harriman is exceedingly careful of the old rails. This road, cheaply con-structed, under great difficulties, has been of immense advantage to that country, and E. E. Lytle's management of it must have been very satisfactory. for every-body has nothing but praise for him. Five prosperous towns-Wasco. Moro, Grass Valley, Kent and Shaniko-have been built on the line. Of these, Moro, the county scat of Sherman County. Is the most important. from the crowd. the most important.

ro has a population of about \$60, two marks, a prosperous newspaper, published by that old wheel-horse of Oregon jour-C. Ireland, and his son; a ionen good stores and all other shops and dgns of prosperity. The other towns Igns

signs of prosperity, involved places and good openings for business. Shanko, being the southern terminus of the railroad, has special advantages in being the receiving and shipping point for a vast region, receiving wool and livestock a vast region, receiving wool and livestock from and shipping merchandise to points is one of the oldest settlements in East-is miles south. The Shaniko warehouse robably handles more wool per annum a plain overlooking the lake, which is han any other local warehouse in the inited States.

Traveling by Stage. At Shaniko I was held up two days for the storm to pass, and it did pass or northward at the rate of 5 miles an hour, the snow skinming along in sheets and avalanches, not falling on the ground. From Shaniko to Primeville we had a covored stage, six passengers and haff a ton of freight, and made the 60 miles in two days, daylight. For most of the way we had as fellow-travelers on the road and campers in the same house at night. campers in the same house at night, uber locators, of whom two were la-and of whom we will hear more er on dies.

was a cross-country run, climbing This town is so situated that any ralithe team, and then dushing down the other side with wheels rough-locked to keep from slipping off the rond down the

hotels, a bank and one of the best-edited and newsy papers in the state, and large and prosperous stores. All the residences are new and handsomely painted, and many of them equal to anything in East Portland, and they are now erecting a public school building equal to anything in the state. "Biockaded by Heavy Snow. At Bend we struck the great snowfall, the heaviest in 29 years, according to the oldest inhabitant, and were held up for four days, awaiting the opening of the road. From a point about 12 miles south of Bend, down to Silver Lake, 80 miles, the depth of the snow averaged about tainty of becoming the big town of Southof Bend, down to Silver Lake, 80 miles, the depth of the snow averaged about four feet before settling. The stagement managed to get through a letter mail on horseback, but abandoned all their wag-ons. Then, bunching up their teams, they forced them over the road in space, wail-lowing through as best they could for

mail, for he has more facts and argu-ments than one could answer with a book. Klamath Falls has more resources and advantages to build up a city than any other place in Oregon outside of Portland and Baker City. The Government will prigate and receipting from swamp 500000 lowing through as best they could for three days, until a road was broken. This great fail of snow at this point is accounted for by the proximity of the line to the Cascade Mountains. Promised by the stage company the use of a fine irrigate and reciaim from swamp 500,000 acres of rich land around the town. All the other lands within a radius of many "cutter." which the village blacksmith was building, the vehicle turned out to be a horse-killer, somewhat like an arctic siedge. But as the mail had to go, and as I was the only passenger, we-"Butch-er Bob." the driver, a joly good fellow, and mywelf-pulled out of Bend on the evening of January 23 for Silver Lake. A good-natured crowd had gathered to give us a grand send-off, and, bidding my host O. Kape of the Houel Bend farewell which the village blacksmith miles is rich, productive soil, and much of it covered with fine timber. Right at the town is a vast cheap water power. the town is a vast cheap water power, which can be used five times over in a mile to operate manufactories or

roads Confident of the Future.

The town is already a hustling place, confident of its own future; with electric lights, city water, banks, stores, hotels, of the Hotel Bend, fares we departed amid jocular admonitions newspapers, steamboats, and every shop, factory and facility to push ahead with an active, healthy growth. Sixty new houses have been built the past year; many are under construction, and there is a certainty of having railroad connec-Hardships of Winter Travel. Bob assured his passenger that we would get through, and we did. Leaving Bend at 7 o'clock in the evening, wallowing through the snow all night, delivering 20 private mall sacks more or less to the farmers' letter-boxes on the line, we tion with the whole country within four months. Real estate is booming and prices advancing; and the town can never reached Cort Allen's ranch at 4 o'clock the next morning, 26 miles in nine hours; and our team entirely given out. Mr. Alhave a competitor within its own exclu nive territory. The soll of all this region that I have

len proved to be the right man in the right place, and cheerfully got up, made a roaring fire in his best room and fed rich in the mineral elements which fur-nish a fertilizer already in place, which in Western Oregon and the Eastern States has to be purchased from the manour hann. After resting four hours and getting a hot breakfast, we pulled out again, and made Rosland, 22 miles from Bend, in 19 hours' steady pulling. From Rosland on south to Lakeview, across to Klamath Falls and down to Pokegama. 20 miles we had a continuous slatebutd ufacturing chemist.

The climate is mild. I did not believe this before coming here to see in the worst snow storm for many years. Peo-ple in the Willamette Valley generally believe this is a cold, hard climate, but 250 miles, we had a continuous sleighride in a comfortable cutter. The town of Silver Lake, near the it is not as cold to man, animals or plant life as ten degrees above the freezing point at Portland. The difference is produced by the humidity of the atmos-phere. Here the air is dry; in the Wil-lamette Valley it is humid.

Many Business Openings. There are business openings all over

this new country for men of business with some money, and for active, capable young men willing to work. young men willing to work. It was a short half day's sleighride from the Falls down to the end of Lind-ley's logging rallroad at Pokegama. And then from that plateau, on the top of the Siskiyou Mountains, with the snow two feet decep and everybody cutting firewood, but a short run down to the South-ern Pacific and over into the Rogue River Valley at Ashland, where we found all the farmers out in the fields in their shirt-sieves plowing in the warm sunshine

for their Spring crops on February 6; a veritable transformation scene that made me doubt my own eyes.

Multnomah Inspector Insists That City People Keep Them Clean. Freewater Wants a Fruit Cannery.

The campaign for clean orenards is in full swing and everywhere spraying ts being resorted to by fruitgrowers. as shown by the country newspapers. The following is from The Argus: "The Hillsboro orchards are being sprayed with a vengeance, which goes to show that the agitation for killing the San Jose scale has not been fruit less. Orchard after orchard has been less. Orchard after orchard has been entered, and the pruning knives and spray pumps have been working over-time. This should extend into the country, and be kept up for two or three years, and then we shall have some fruit that will grace any market in the work?

in the world." And this from the Corvallis Times: And this from the Corvallis Times: "As to cleaning up the old orchards, it looks as though Benton would lead the procession. Members of a spraying firm in the Times office yesterday, de-clared that every farmer they have met expects to join in the war or cut down his trees. Professor Corviley is kept have night and day." busy night and day."

Culprits in the Citics.

Soon the culprits left out will be the owners of individual trees and of rose bushes in the towns and cities. In Mult-nomah the inspector is getting after them sharply-so much the sooner will the end be gained. Remember the new edition of bulletin on spraying to be had from the Corvailis Agricultural College for the asking.

It is a pleasure to notice the address of Thomas Prince, of Dundee, at the Forest Grove horticultural meeting on walnuts. Eminently practical and sen-sible, especially in the cautions as to planting no seedlings except those raised from nuts from grafted trees. The speaker warned his hearers against using black walnut stocks, lest the nuts from grafts thereon should be dark colored. Is this coming from experfence? It is not generally believed that color of the fruit grown from grafts of fruit trees in general is gov-erned by the color of that which the stock would have produced if un-

grafted. Very wise was the suggestion to use here the French late blooming varie-ties. In North Italy the wainut is widely grown, as also in Japan. It is worth while to profit by experience gained

there

Every farmer in the Willamette Val-

Walnut Should Be Planted. ley should plant a few walnuts near his house. Slow in starting, but rapid in growth and abundant in bearing as years pass the walnut is not only a useful but a most shapely and beautiful tree. Many Oregon residents who remember English villages will recall the groups of walnuts on the edges of the green and round the farms, 70 or so feet in height and as wide spread-

ing as the oak.

Also this from Canyon City: "J. D. Combs and W. H. Officer will leave soon for Portland with 15 span of leave soon for Portland with is span of fine horses, which they will sell at that place. They have refused \$400 each for several span, and since horses seem to be in great demand, they expect to realize quite an advance over that figure on the Portland market.

The news from the large Eastern Ore-gon ranches as to the condition in which cattle are keping through the Winter is generally good. Some of the hay supplies are running out and the cattlemen are trying to buy. Rye hay is the mainstay on some of the ranches, and stock is said

to be doing well on it. From one ranch in the Vale country we learn that for 2000 head they are feeding 30 tons a day of The following paragraph is taken from

the Indiana Farmer: "Two excellent farms and cattle feeders

in Pike County, this state, Messra J. Mor-ton and R. M. Craig, a few days ago sold two carloads of Angus and Shorthorn steers in the St. Louis market at \$5.55 per 100 which average 1450 pounds. It was the top price of the market for the day. They were fed corn and shredded fodder, and had the run of good pasture several months,'making a gain of 700 pounds." Likewise, the following item:

"The Experiment Station of the Kan-sas State Agricultural College, Manhattan, Kan., has just issued Bulletin No. 10, entitled 'Steer Feeding Experiment 7.' The object of the experiment was to test alfalfa as the sole roughage fed with cor and-cob meal, as compared with a mixture of roughages. It being the opinion of many feeders that a mixture is preferable. In this experiment the steers get-ting alfalfa as the sole roughage made better gains and at less coat.

If an experiment were carried out at the Oregon Agricultural College in which the pulverized alfalfa hay-grinding up the entire plant, including the dry stems, rich in protein-were to be used, not as a substitute for this roughage, but as the main liem in the feeding, the results This material, produced at present in California and Idaho, but not in Oregon, so far as is known, has had great su not only for cattle, but also for sheep, hogs and chickens. The Southern Pacific Railroad is

The Southern Pacific Raliroad is as good as its word in the alfalfa experi-ments in each Willamette Valley county. At the Silverton Development League meeting it is reported that they promised 29 or more alfalfa fields as soon as they could be procured. The Telephone-Regis-ter of McMinnville, reports progress in those counties thus: ************************ nsbury, traveling freight H. E. Lo

m that corner of the farm enough inco from that corner of the farm enough ince-ulated soil can be taken to assist the growth of as large an area as is desired. From the above it must not be supposed that incoulation and foothing else is need-ed to make alfalfa growing a success. It is an aid, and a most important one to insure success, when the other necessary conditions are compiled with. Briefly stated, these are deep plowing, clean cui-tivation, a seed bed well pulverized and prepared, fresh, clean seed, and deep and efficient subsell drainage. Of course, weeds must be cut down before seeding. weeds m The seco of itself. and year the alfalfs will take can

Good Weather Hurts Wheat.

City people, enjoying the recent dry, brilliant weather, did not think of its injuring the Winter wheat by premature ly forcing its growth. But the Sale Statesman no doubt tells the truth:

"The farmers who have a wheat crop in this season in the vicinity of Salem are now pasturing it, which is an excellent plan, as the wheat was maturing very fast by the fine weather and would prevent stooling to some extent if it is not kept down to the regular normal growth. The fair weather which preis the product of the country, and right here is where the Preewater peo-ple are the leaders. Annually there are valled during the former part of this month and the after part of last, caused the wheat to turn somewhat yellow, and the farmers were not pleased as to the result of it. The rains of the past few days, however, with the prospect for their and place it on the market. With a cannery established at this point there reasonable continuance, will be an asduct raised, but there would be a re-newed effort to make every available urance of natural and successful growth from now on.

To turn the sheep into the field and keep them there until every vestige of Spring green has gone and nothing but long lines of knawed off roots are visible seems hard medicine the first time it is tried. But once the sheep are taken off

and the wheat starts again how magical s the change. Sometimes from ten to 39 stools where

but one central shoot showed itself be-fore the sheep took a hand, a bunch of stems, each in due time crowned with its yellow ear

into operation for about \$5500. A larger plant could be installed for a corres-ponding larger outlay of capital, but one of this size could handle all the fruit that is now raised, and additions could be made when needed at a small cost.

and

of selected races of organisms, wh paign it is perhaps perilous to recall the wicked old rhyme: will produce cheese of various standard qualities. Micro-organisms are the spe-

Some weeks ago attention was called

to the havoc wrought in the stock of

China pheasants and other game birds

by our Oregon crows. A bounty on these pirates was suggested, to be supplied from the game licenses surplus. This should

surely be kept in mind now, and candl-

dates for legislative honors should be requested, even required, to pledge them-

selves to this amendment. Many hunters

who are good observers report the stock of Chinese pheasants as decreasing and the number of these black robbers to be

increasing fast. When the last season opened many hen

pheasants were found without a single chick: sometimes six or seven old bena gathered in one bunch for company. One of the best of the outdoor papers, the "American Field." of Chicago, has just

new printed the following indictment of

the murderous crow. A correspondent writes that paper: "The crows begin about 4 o'clock in

the morning, or a little later, and they

look the shade trees over for the young birds. They go into the trees that stand

in yards and that line the streets, close

by buildings. As soon as people stir from their houses the crows disappear for the

day, but begin again next morning just the same, and they cat every young bird they can find. The robin will put up a

good fight with them, but the crows will

get the young just the same. Every kind of small bird that builds its nest in trees

or on the ground the crows are destroy-ing rapidly. After the young have reached the age when they can fly well

I have watched the crows catch, kill and eat them in the air. I have watched them break up the nest of the meadow lark

that builds on the ground; in fact, they kill everything they can, being, as they are, very fond of meat." And the Field rays:

"The young of song, insectivorous and game birds are worth more than all the

crows, and laws should be passed that

will bring about their decimation, if not

"The laws of most states protect the

nests of game, song and insectivorous birds, and attach heavy penalties for mo-

lesting eggs. If it is criminal for persons to molest nests or eggs, then it is no less so on the part of such birds as have

a predilection for devouring eggs and young birds, and a premium should be offered for meting out to them the fate of the birds they would destroy. "Just as there are many noxious flora in the botanical world, that man is jus-tified in destroying a pre-there many

tified in destroying, so are there many obnoxious species in the ornithological
