Pain in the Head

Is a danger signal, warning you that the brain nerves are exhausted—irritated, and are undergoing an unusual strain. Frequent and prolonged attacks of pain weaken the generative power of the nerve cells of the brain, and lead to loss of memory, melancholy, overexcitability, and frequent headaches.

When the brain nerves are weakened, they are unable to supply sufficient nerve force to the organs that control the lungs, heart, stomach and other organs, and these organs are thus subject to disease, and unable to meet the demands placed upon them.

Stop the head pains with Dr. Miller's Pain Pill, and the influence upon your general health will be greater than you can realize.

SPECIALIST FOR MEN
